The following address was given by the Chairman, Mr. R. T. Trembath, to shareholders at the Annual Meeting held on February 17:

The net profit for the year 1952 before providing for taxation was £853 compared with £7,788 for the year 1951. This reduction was due almost entirely to the expenditure for repairs and renovations amounting to £6,431. This expenditure as stated in the Directors' Report was exceedingly heavy owing to previous inability to obtain a permit to expend considerable sums upon such works during and after the war. This sum has all been expended in one year instead of being spread over a number of past years when costs would have been much lower. If this extraordinary expenditure and the fact that we did not earn any interest from investments be taken into consideration it will be seen that there would have been little reduction in the net profit earned from the year's trading.

Additional profit from increased liquor sales during the year was more than offset by increases in wages of staff, cost of provisions and the licence fee, but nevertheless the trading gross profit was only £235 less. Although the tariff charged to guests has been increased from time to time to the extent allowed by the Prices Decontrol Commissioner, these increases have always lagged behind owing to continually rising costs with the result that the house trading shows a loss. Your Directors are hopeful, however, that the small increase in the last adjustment of the basic wage is an indication that the upward trend of inflation is at an end and that in future they can look forward to a period of stability and normal trade.

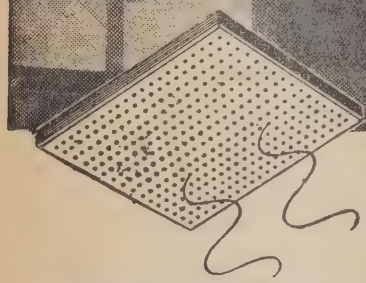
Repairs and Improvements.

It will be seen by a comparison of the Balance Sheets of 1951 and 1952 that the property including buildings, licence, furniture and plant has increased by £9,186, which, allowing for £255 depreciation written off furniture and plant, means an expenditure of £9,441 during the year. This expenditure was, of course, additional to the amount debited to Profit and Loss Account for repairs and renovations. It was capital expenditure upon improvements and plant and furniture. The improvements to the Hotel building effected during the year were to comply with requirements of the Licensing Court and to increase and improve amenities for the comfort and convenience of the public. The improvements included the enlargement of the public bar. Those shareholders who have visited the hotel will remember that there were two shops in the north end of the frontage of the hotel building. The bar has been extended into the area previously occupied by these shops and will provide ample space for customers during peak trading hours. Quirks refrigeration plant also has been installed. This plant provides the most up-to-date system of cooling beer.

New Nominee.

Mr. L. H. Greed was appointed nominee of the Company and Manager of the Hotel last May, and your Directors expect that under his control and with the assistance of his wife in charge of the house, the management of the hotel will prove to be most satisfactory.

The Mallee district has experienced a succession of seven bountiful seasons never experienced in the Mallee previously. The production of wheat and wool over that period has in consequence been much above the average, and with high prices for wheat and wool has brought prosperity to the district.



484 traps in each 12" square tile reduces noise by 65%.

Rural Bank (Sydney) installed noise-absorbing Cane-ite Acousti-Tiles in their Billing Department without any interruption of office routine

Cane-ite Acousti-Tile are as easily installed over existing ceilings as in new construction. When noise has been excessive they are often continued part-way down the wall as seen in this photograph of one of the offices in the Rural Bank which now enjoy Acousti-Tile quiet.

You will find Cane-ite Acousti-Tile in many other banks and Government offices, churches, clubs, broadcasting stations, hotel bars and telephone booths throughout Australia.

As sound waves hit the tiles they are absorbed by the 484 noise traps in each tile—they dissipate instantly.

QUICKLY INSTALLED — NO INTERRUPTION OF BUSINESS!

*In 1951, debited with £774 loss on sale of assets; in 1950, credited with £1,093 surplus on sale of assets.
†Adjusted for £8,043 taxn. overprovided.

Directors state that sales were seriously affected by increases in sales tax and credit restrictions, combined with competition from imported lines. Prices fell and stocks had to be written down at balance date.

Production was hampered by the transfer into partly constructed premises at Fairfield, and by delayed delivery of machinery from overseas, and consequently capital was not fully utilised.

McLaren Industries Ltd.

Printers, Carton and Cardboard Box Manufacturers.

Reg. Office: 144-164 George St., Fitzroy. **'Phone:** JA 5183. **Directors:** J. P. Beveridge (Chairman), G. E. McLaren, G. V. Briggs. **Auditors:** Hancock & Woodward.

Year ended November 30, 1952. Meeting March 6, 1953.

Trading conditions were more difficult. Availability of paper and board improved, and prices of imports fell considerably. Sales were maintained, but profits were slightly lower at £46,454.

The second consecutive annual increase of 1% brings latest distribution to 10%, which was more than twice covered by available profits. This year's dividend was partly tax paid, and future dividends will be fully taxable.

Depreciation was £10,000 higher than in the previous year, and includes increased provision for replacement.

The following address to shareholders was given by the Chairman, Mr. J. P. Beveridge, at the Annual Meeting on March 6:

The accounts, as you have seen, show a net profit, after taxation, of £46,684, which represents an earning rate of 21.2 per cent. on our paid-up capital. Of this, it is recommended that £22,000 be appropriated for a dividend of 10 per cent. The printed report explains that our reserve of tax-paid profits will this year be exhausted by providing the major portion of this dividend. The balance will be taxable in the ordinary way, and future dividends will be taxable in full.

The remainder of the year's profits has been retained in the business, and forms part of the amount of £50,000 which has been transferred to general reserve.

I do not propose to analyse the financial statements, since they have already been presented to you in some detail. The balance sheet indicates that our organisation is in a sound financial position, with a low bank overdraft, and a very safe ratio of current assets to current liabilities. Stocks on hand, which have been conservatively valued in view of the fall in overseas prices, are adequate but not excessive.

One specific item should perhaps be referred to. During the year your Board reviewed the Company's policy of depreciation of fixed assets, and as a result is now providing a greater amount annually for the eventual replacement of plant and machinery. It will be noted that the total charge for depreciation this year is £17,481, whereas in 1951 the total charge was £6,904.

Activities of the Company Group.

The group of companies controlled by McLaren Industries Limited is a closely-knit organisation covering a fairly wide sphere of activities, mainly within the printing and allied industries.

McLaren & Co. Pty. Ltd. is the main operating company. It is engaged in the manufacture of cartons, cardboard boxes and other packages, and in printing of all descriptions. With the aid of its subsidiaries, it ranks as one of the foremost companies in Australia in the field of colour reproduction by means of photo-lithographic printing.

W. B. Litho Co. Pty. Ltd., another wholly-owned subsidiary, carries out the whole of the lithographic printing for the group. It operates a modern printing plant, which includes seven offset presses.

A valuable adjunct to this section is the ownership of a one-third interest in a private company which produces the high-quality plates needed for photo-lithographic printing.

Wembley Board and Paper Mills Pty. Ltd. is another subsi which is engaged in the manufacture of laminated paste-bo and pasted document manilla boards. Its products are distrib under the Wembley brand, through wholesale paper merch throughout Australia, and are widely used in the printing indu

Cambridge Manufacturing Co. Pty. Ltd. is one of our recently formed subsidiaries. This company specialises in th sign and printing of the novelty type of packaging, and also substantial business in the production of Christmas and gre cards.

Mars Packages Pty. Ltd. was formed, in conjunction Swedish interests, for the production of specialised paper ba the S.O.S. (self-opening square) type. This type of bag is extensively overseas, and as it is made to extremely fine tolera it is particularly suited for use in the mechanical packing of g The bags can be made in single or double wall, and may be pr in one, two or three colours simultaneously with manufac This company is still in the early stages of development, b the use of automatic packing machinery increases in this cou so will the demand increase for the specialised bag of this ty

The Future.

The year through which we have just passed has seen, i space of a few months, a change-over from under-supply to supply. For years, during and after the war, it was only too for any sound firm in the printing and allied industries to o all the orders it wished. The position now is quite different, it is only the maintaining of high standards in workmanship, reasonable prices, that will keep our order books full. We come the return of healthy competition, without which any i try must eventually stagnate.

Our major activity has been, and still is, the design and m facture of printed packages, and it is in this field that I see greatest possibilities. The pre-packing of foodstuffs such as s salt, rice, eggs, biscuits, plain flour and many other commo is still in its infancy in Australia, although the rapid grow self-service shops is a major factor in developing the idea. matic pre-packing into consumer packages is now almost univ in America, and its adoption here is only a matter of time.

I should like to conclude with a word of thanks to m directors and to our loyal staff in factory and office. Without no success would be possible. With their help, we can fac future with confidence.

Whale Industries Limited

Reg. Office: 21 Macquarie Pl., Sydney, N.S.W. **Directors:** R. Crichton-Brown (Chairman), W. Buckingham, L. W. Farnsworth, J. F. Mant, W. M. Mayberry, D.S.O., W. M. McLennan, R. Shannon. **Auditors:** Binder, Hamlyn & Co.; Priestley & Morris.

Year ended October 31, 1952. Meeting December 31, 1952.

Formed in 1951, the company commenced whaling operations at Tangalooma near Brisbane in June, 1952, and 600 whales (the maximum allowable) were caught in the first season.

Profit was £69,431 (13%), and a dividend of 6% was paid.

THE LAND WE LOVE

If you are saving now, quietly confident that hard work and a closer economy will enable Australia to get through the difficulties of this inflationary period, you are also creating possibilities for self-advancement and better conditions of living.

By saving today, we benefit ourselves individually and the whole nation as well.

Thrift is the basis of all prosperity. Thrift is saving for things worth while. Therefore SAVE.

THE STATE SAVINGS BANK OF VICTORIA

"Save at THIS Bank"

The following remarks were made to the Annual Meeting on December 11, 1952, by the Chairman, Mr. V. Hyams:

The Directors are pleased to welcome you to the First Annual Meeting of Nathan Trading Company Limited.

You have, no doubt, all received the Balance Sheet and will agree that, under the difficult conditions that have existed in the past year, results are satisfactory.

In common with most businesses, our results have been affected by import and credit restrictions, and the extremely high rates of sales tax imposed last year. In spite of th difficulties, turnover increased to a considerable extent in Departments. The profit position was affected by the incre in cost of conducting business.

Prospects for the current year are satisfactory, and t over for the three months to date more than maintained. Directors have plans in hand for extending the Compa activities, but it is premature at this juncture to discuss th

In his address to shareholders at the annual meeting on April 28, the Chairman, Mr. M. Shmith, said:—

As indicated in the Directors' Report, we have published this year a consolidated balance sheet of the holding company and subsidiaries instead of publishing with the balance sheet of York Motors (Holding) Limited a separate one for York Motors Proprietary Limited—as has been done in past years. The position and trading results of the business are more readily seen from the combined figures and in any event, the acquisition of an additional subsidiary company this year made it more desirable that we should amalgamate the figures of all three companies, and, I might add, that the form of presentation of accounts has received favourable comment from financial experts.

From the consolidated profit and loss figure you will note that the aggregate net profit of £480,521 for the year was almost £430,000 less than the previous year's net earning, and the reduction in sales is mainly responsible for this downward movement.

Sales.

The sales achieved by the company for the 12 months totalled £13,575,221 and this represents a reduction of just over 25% when compared with the preceding year's record turnover.

Our gross trading profit, which includes dividends received and other sundry income, was approximately £734,000 less than similar earnings for the preceding year, but this reduction was partially offset by the smaller amount necessary to provide for income taxes which, at £401,393, was about £363,000 less than last year.

As mentioned in the company's report for the previous year a slackening in demand for motor vehicles was first noticed in Queensland, where the market was early affected by bush fires and drought conditions. In the latter half of the financial year under review a general reduction in sales occurred in both states and it appears that the abnormal market which existed post-war has now given place to more normal trading conditions and the administration and overhead charges are being adjusted accordingly, and should be reflected in the current year's trading figures.

The market for motor trucks has been limited, this position being accentuated because of Government road transport restrictions.

Import Restrictions.

The introduction of import restrictions in March, 1952, has assisted in reducing stocks, and as a result, our outside liabilities have substantially decreased. However, we at present find that, because of such restrictions, the demand for some of our franchises is now in excess of the number of vehicles available, with the result that our undelivered customers' orders are considerable in some makes of motor cars. This position can only be rectified in the current year by a further easing of import restrictions.

Your Board is pleased to see the expansion which is taking place in Australian factories of United Kingdom motor vehicle manufacturers, as this will be of assistance in improving the volume of units available for the Australian market.

The dollar shortage still limits the supply of vehicles from American principals but here again the Australian factories are being developed and it is anticipated that the flow of vehicles will progressively increase as a greater Australian content is introduced.

New Premises.

Mention has been made in the Directors' report of the completion of our new motor vehicle assembly premises at Mascot (Sydney) and the utilisation of this building has greatly assisted both our assembly and service facilities.

The new subsidiary company acquired during the year owns the property in Surry Hills (Sydney) which is now utilised for specialised service of Rolls Royce and Bentley cars.

Staff.

Before closing I must refer to the co-operation and assistance rendered at all times by the management and staff, and it gives me pleasure to record the Board's sincere appreciation of their efforts on the company's behalf.

Overall sales rose by 60%, due mainly to the packing of meat for export, which commenced in August. Sales of vegetables declined in the latter half of the year.

Factories are at Brunswick and Pakenham. A wide range of goods is produced, including tomato products, soups, canned vegetables, canned meats, etc.

The following report by the chairman, Mr. A. P. Dyason, was circulated to shareholders with the annual accounts—

In reading this report, it must be borne in mind that the company has passed through a critical year of very difficult trading conditions, yet it has achieved a great deal, in spite of the many set-backs.

Early in the year, it appeared that the market could absorb all that the company could produce in the way of canned vegetables, and up until the end of June, sales of these lines were at a record figure. However, because of the lower purchasing power, and the phenomenally low prices of fresh vegetables, sales declined during the last half of 1952.

During the last winter and spring, heavy and continuous rains adversely affected the planting and harvesting of our pea crops in the Pakenham area, and this meant that in 1952 the Pakenham factory had not yet had any advantageous effect on our profits.

Trading Results.

Although the profits are lower than 1951, the directors feel that having regard to all of the conditions experienced, the company has achieved a creditable performance. It would be possible to pay a final dividend by drawing on reserves but in view of the smallness of these, and of the necessity of conserving liquid resources to finance seasonal stocks, the directors consider it unwise to do so. Adequate depreciation has been written off fixed assets, in keeping with the policy of maintaining and installing up-to-date plant, so that production costs can be kept to a minimum.

Sales—Canned Vegetables.

As explained earlier, these fell off during the last half of 1952, although practically all of our tomato pack, which is the largest individual pack, was cleared. Increased selling prices were obtained in some instances, but rising costs offset this advantage.

Overseas demands declined, mainly because of shortage of currency in many importing countries. Where sufficient currency is available, our products are holding their own with those of other countries.

Canned Meat.

During August, the packing of meats for the United Kingdom commenced. Production and sales continued at an increasing rate until the end of December, and this was the main cause of the increased overall sales volume of 60 per cent, as compared with the previous year. The quality of our packs has always been first-class, and the company is not involved in any way in complaints or reported litigation over Australian canned meat in the United Kingdom.

Supplies.

Although tinplate was still short early in 1952, all restrictions were later lifted, and no trouble has been experienced. Bottles are also freely obtainable, although a further price increase in 1953 come at a time when other manufacturers are lowering pric Sugar and other commodities are no longer a problem.

Property—Brunswick.

No further additions were made to the buildings during the ye and none are contemplated at present.

Pakenham.

Completion of this project was the outstanding achievement the year. The original plans were completed in full, and the re has justified the faith of the directors in this venture. The buildi themselves are large and well constructed, lighted, ventilated drained, and have ample room for a larger output when the necess arises.

Suitable employee amenities are provided as well as a st engineers' shop, laboratory, offices, boiler-house, etc.

The factory has its own bore water supply, in addition to town's main, its own sewerage disposal system, ample storm wa drainage, electricity, and the only weighbridge in the town. Its senior executives are housed in the company's houses, alongside factory land.

A railway siding alongside the property will be provided w the Gippsland line is duplicated and converted to electricity.

The whole property and plant layout has resulted in the lar and most modern vegetable cannery in Victoria, and will en large scale economical vegetable production to be carried out.

Plant.

Additional plant was installed at both factories, as well as transfer of some vegetable plant from Brunswick to Pakenh The meat canning needed small additions, including cool rooms holding our meat supplies over night. Further harvesting plant obtained for the expected pea crops. It is anticipated that no plant will be required for 1953, other than minor replacements existing plant.

Finances.

Paid up capital was increased by the completion on March of the issue of 360,000 ordinary shares of 5/ each, which were converted to 5/ stock units.

The additional capital was used to help finance the comple of the Pakenham building and plant.

The building of the Pakenham factory and the purchase of necessary plant, plus the financing of seasonal stocks and wor capital for the canning of meat, strained the resources of the co pany to their utmost. Our bankers have been most helpful assisting us, but the immediate aim is to improve the liquid posit and given normal trading conditions, this year should see a g difference in this respect.

Raleigh Containers Proprietary Limited.

This subsidiary paid £2,000 in dividends during the year to aleigh Preserving Company Limited, as a result of its increased les. These were much higher up until the end of June, but opped back later, because of the prevailing economic conditions, d at this stage of writing, it is most difficult to forecast the sult of 1953.

Personnel.

All employees have worked very hard and loyally. The class of nployee at Pakenham is excellent, and no trouble is being experi-ced in obtaining sufficient labour, in spite of the seasonal nature the work.

Appointment of Additional Directors.

In April, the board felt the need to re-organise the sales and pply departments, to give greater control over policies of the ard. Consequently, Mr. F. G. Woodward, who was sales manager uthern States, was appointed to the board as supply director, and Mr. P. A. J. White, previously sales manager Northern States, as sales director. Both of these new board members have been with the company for many years, and their appointment was worthy of their efficient and loyal service. The result of the appointments has been most successful.

Executive appointments include Mr. D. J. Gamble as accountant, and Mr. P. R. Johnstone as merchandising manager for Australia.

Future Outlook.

The company is now in a strong position to take full advantage of business offering in the lines which the company produces. The demand for canned vegetables, at the time of writing, has considerably improved, and we expect to maintain a satisfactory level of production and sales.

In regard to the canning of meat, the directors are confident that the existing over-supply position in the United Kingdom will soon be overcome, and that the company will receive its share of the market there.

Sheldon's Holdings Ltd.

eg. Office: 1 Roche St., Hawthorn. **'Phone:** Haw. 3074. **Directors:** L. R. Hocken (Chairman), A. E. Hands, D. Hutchison. **Auditors:** F. A. & W. A. Coghlan.

2nd Year ended September 30, 1952. Meeting December 11, 1952.

Despite an increased profit before tax, the heavier incidence f taxation caused a reduction of £418 to £4,173 in net profit. ividend of 10% was again paid on publicly subscribed capital f £30,000. Following this, deferred ordinary shares are now igible to participate in future profits, and these shares are erged with the ordinaries.

"Our turnover and profit since June compare more than favour-ly with the same period in the previous year," stated the Chair-n, Mr. L. R. Hocken, at the Annual Meeting on December 12. said:—

The latter half of the year under review was fraught with ny unforeseen difficulties which resulted in considerably less rofit being made than was expected.

Trading Conditions

The drastic electricity restrictions imposed during April and y caused considerable dis-organisation, and in order to keep h with our clients it was found necessary to give a modified vice at a reduced rate. This resulted in a serious loss of re-nue, apart from increased costs of handling the work in a re-ed production limit of 2½ days. Coupled with this was the eral trade recession which further reduced our profit ratio in latter half year. However, in spite of this the profit before ation was greater than the previous year.

Prospects

Re-organisation has taken place following the trade recession, with the result that our turnover and profit since June compare more than favourably with the same period in the previous year, and we feel optimistic about the outcome of the current year.

One point of course is always a matter for concern and that is wage and material costs are still rising, and the cost of Government services such as rail freight, electricity, etc., will add approximately £2,000 to our expenses. Indications are however that these increased costs will be absorbed in greater turnover, and no price rises are contemplated at present.

Dividend

Your Directors recommend that a final dividend of 5% be declared, making 10% for the year out of the year's profit of £4,173.

Staff

I desire to express my thanks to the Directors and Staff who have worked with splendid co-operation during the year.

The Rosella Preserving & Manufacturing Co. Ltd.

Jam Manufacturers, Fruit Preservers, &c.

Reg. Office: 64 Balmain St., Richmond, Vic. **'Phone:** JB 2171. **Directors:** E. Alec Cato (Chairman), T. L. Stafford (Manag. Director), F. W. Kiel, J. Turnbull (Genl. Manager), J. H. Brandreth.
Auditor: S. R. Hill.
42nd Year ended September 30, 1952. Meeting March 26, 1953.

Turnover was equal in value to the previous year's record, but was appreciably down in physical volume. Profit on increased capital was £22,000 higher at £154,089 and dividend of 12½% was more than twice covered. Reserves rose to £575,338, almost equal to paid capital.

*Include share premiums (1952, £50,425; 1950, £2,294).

Factories in Victoria, New South Wales, South Australia and Tasmania produce jams, canned fruits, sauces, preserves and pickles.

Manufacturing activities were expanded at Windsor, New South Wales, during the year, and further extensions at Tatura, Victoria, are expected in 1953.

Net tangible asset backing (book values in consolidat balance-sheet)—19/1.

"Owing to the steep rises in costs of sugar and labour, Australia has lost its best export market (the United Kingdom) for all our class of goods except canned fruits," said the Chairman, Mr. E. A. Cato, at the Annual Meeting on March 26. His address reads:

During the year under review sales were affected by greater competition, sales resistance by the public and lack of export markets, but I am glad to say that in value our turnover was equal to the record achieved the previous year though appreciably down in physical volume.

You will notice that stocks on hand at the close of the period were approximately double those at the opening, and this is the sole reason for the much greater overdrawn account at our bankers. At this present moment both these items have been considerably reduced.

We have followed our established custom and have valued stock on hand at a very conservative figure.

Payroll Taxation.

I would like to refer to the effect of high taxation, and particularly to what can be termed the iniquitous payroll tax. Those manufacturers, and we are one of them, whose output requires a large proportion of manpower are heavily taxed, while others such as importers and indent agents with vast turnovers and profits but who employ but few workers get off lightly. In effect, the authorities say, "You employ labour and the more you employ the higher you will be taxed for doing so."

We trust that the Treasurer when considering the question of taxation will give serious thought to abolishing this inequitable tax, even if only in the interests of full employment or to encourage employers to grant margins above those that are statutory.

Efficiency in Industry.

Including union members, 17 representatives of British Chemical Industries have recently visited similar works in U.S.A. This committee expressed their views as to why many plants in U.S.A. are twice as effective as their British counterparts.

I quote from their summarised report:

"Investment in capital equipment per employee in the American heavy chemical industry is today some two or three times that in the British industry.

"American companies had, on average, one technically qualified man to every six hourly-paid workers, whereas in Britain this rate was about one to every sixteen.

"In Britain, 28% of all employees are members of the salaried staff (administrative, technical, supervisory, research and sales); in the U.S., this figure appears to be round 40%.

"We found no greater nor more striking disparity than this, and we consider that from it must stem many of the differences of productivity.

"Labour unions can help increase British chemical productiv in three ways, the team members say. They recommend th unions—

(a) Liberalise the present apprenticeship system.
(b) Educate members on how the use of labour-saving equ ment can help to raise the workers' standard of living.
(c) Increase the effective co-operation between local unions a factory managements to enhance productivity and thus bo the prosperity of both company and workers."

Relative unionisation of chemical workers is greater in t United Kingdom than in America and team members noted t workers in America's "unorganised factories" generally had bet rates of pay and working conditions—"a fact that could be int preted to mean that in those factories the managements w avoiding unionisation by keeping ahead of it."

My comments on the above are that the essential differen as disclosed between British and U.S.A. chemical plants proba apply equally between U.S.A. and similar Australian plants s more than probably apply to the relative effectiveness of U.S and Australian manufactured food production houses.

In Australia the essential need is to first mechanise and t to train and employ a greater percentage of highly qualified dustrial engineers and chemists and to assure union representati that these measures are in their interest as well as in the int est of the company.

With reserves of investment capital drying up among speculative public, restrictions of credit and income tax exacti whittling down the natural reserves of both large and small c panies it is difficult to see how these very desirable factors effectiveness can be put into operation.

However, within the limits of our resources, this company try to emulate our U.S.A. counterparts.

Wages.

Wages continued to rise during the year under review, industry base rate being increased by 38/- per week, equivalen 18%. Since then the rate has increased by 4/-, but it would ap that we have now reached the "levelling off" stage and that cost of living index should not continue to rise to any appreci degree.

Export Markets.

The production of jam in Australia has fallen rapidly in last two years due to the loss of the export market mainly account of the price we have to pay for Australian sugar. Government has agreed to pay a rebate on the sugar conten jams exported, but until we obtain sugar at the same pric South African producers we have no hope of competing, and t is still a very big gap to bridge. Owing to the steep rises in c

sugar and labour, Australia has lost its best export market he United Kingdom) for all our class of goods except canned uits. We can export to India only on a permit basis, and we are w advised that Indian import duties on jams, sauces and pickles ve been increased from 36 per cent. to 66 per cent. on C.I.F. lues.

Tinplates.

Overseas prices have been reduced for forward deliveries, but e most pleasing feature is that we are not now compelled to der against quarterly allocations, and this should be a consider- le factor in the reduction of our bank overdraft.

Bottles and Jars.

Unfortunately, the price of these continues to rise, and only is month we are advised that the Prices Branch has granted a rther increase.

Bad Debts.

The amount written off is so small that it is almost impossible calculate the percentage on turnover, and I think the officers of e company responsible for control of credit deserve our con- atulations.

Transport Regulations.

The primary object of these regulations is to compel manu- cturers to use the Railways irrespective of cost or convenience. far as our Tatura factory is concerned we would be placed at serious disadvantage if we are compelled to transport the manu- ctured goods by rail to Spencer Street as compared with metro- litan processors who transport only the fruit and vegetables by ad direct to the factory in Melbourne.

However, our representatives have already appeared at a public aring before the Transport Board, and I will not say any more this matter at this stage except that I trust that decentralisa- on of industries is still considered to be as important as it was 1946.

Containers.

The high cost of wooden cases and the labour involved in nd packing them with goods has necessitated the use of card d fibre containers. We have purchased a number of mechanical ckers, and now goods are automatically conveyed from the anufacturing line direct to labelling machine and from there to sing machine. Where big volume production is involved this eans appreciably lower costs.

Fruit Chambers.

We have recently constructed at Richmond fruit chambers for e controlled ripening of pears for canning. This will mean not ly enhanced quality but will eliminate much waste and handling sts.

Sweet Corn.

We have imported and used this season a mechanical tractor awn sweet corn harvester. This has proved a highly successful novation.

Conclusion.

In conclusion, I would like to state that sales since the close the year are more difficult to achieve owing to fierce competi- on in a market that is over-supplied with certain of our class of ods. However, our turnover in the six months since stocktaking ives grounds for quiet optimism as to the results to be achieved the current term.

Woolworths Limited

Chain Store Proprietors.

eg. **Office:** 80 Market St., Sydney. **Directors:** C. Scott Waine (Chairman), W. T. Kelly (Manag. Director), S. E. Chatterton, E. R. Williams (Act. Chairman), C. R. Hart. **Auditors:** Walmsley, Cowley & Co.

28th Year ended January 31, 1953. Meeting April 14, 1953.

Sales increased substantially and gross profit margins were aintained. Taxation paid was higher, and net profit was 2,000 lower at £454,915. Dividend was repeated at 12%.

Earnings are derived mainly from the sale of wool, livestock, station properties, etc., through a chain of 45 branches in Victoria and the Riverina.

As a result of a satisfactory season, wool growing conditions were excellent and resulted in a larger clip than last year. General rains are now looked for to ensure winter feed.

The main feature of the wool selling season to date has been the steady and consistent demand for all types of wool. This has resulted in full clearances at satisfactory prices.

In his address to shareholders at the Annual Meeting held on Tuesday, May 26, at the Company's office, King Street, Melbourne, Sir Clive McPherson, Chairman and Managing Director, said:

I have pleasure in reporting that the results for the past year have been satisfactory, and that once again we have been blessed with a good season. We have enjoyed a succession of seven good seasons in Southern Australia, and whilst at this critical period of each year we look forward once again to a favourable break in the weather, it should not be forgotten that the recent run of good years is considerably above normal, and therefore a period of lesser rainfall might well be expected. Stock are generally in good condition, and with the amount of old feed still existent could well carry through a temporary dry spell. Looking back over the last few years, we have been particularly fortunate in that we have enjoyed bountiful seasons as well as record high prices for our stock and produce—two favourable factors that often do not occur together. Prudence calls for a recognition of these extraordinary conditions, and for some provision for the future in anticipation that such cannot continue indefinitely. Further, it is essential that Government recognises before it is altogether too late that reserves in industry must be permitted if we are to have a reasonable chance of getting through successfully a period of lesser prosperity, and I commend to Government consideration of some scheme that will allow a measure of profits to be so allocated without taxation, to be reserved for future use.

Queensland and the Northern Territory have suffered from severe drought, but good rains came late last year and now generally the season is good in those areas.

Stock.

The Census figures for this year not being yet available, it is estimated that the approximate number of sheep in Australia will exceed 118 million.

Cattle figures at a census taken last year were about 15 million, but owing to the severe drought in Northern Australia, this number may be depleted.

Our turnover of stock has again proved satisfactory, and with good prices realised throughout the year, this section of our activities has shown good results, in which our 45 branches play a major part.

Wheat.

Our wheat crop in Australia for the 1952-53 season has been a good one. Whilst during the year there were periods of apprehension concerning the crop, late rains ensured a good return resulting in 179 million bushels delivered to the Australian Wheat Board as against 146 million bushels last year.

It is to be regretted that United Kingdom could not see its way clear to join in the International Wheat Agreement, but it is hoped that her Australian quota can be allotted to her. Australia's quota under the agreement has been reduced to 75 million bushels as against 89 million bushels last year.

Wool.

For the first time in history wool received in the Victorian centre for the 1952-53 season will exceed one million bales. The continued run of good seasons, pasture improvement, together with measures taken for rabbit destruction, have all been factors contributing to the establishment of this record.

Confident trading at satisfactory and steady prices marked the first nine months of the current season, and full auction clearances were made. The United Kingdom demand showed further improvement, and she easily retained her position as our largest and most versatile buyer. On the other hand, American inquiry was well below that of the previous season, due to a curtailment of orders on military account. Increased purchasing by Japan to some extent compensated for the American reduction, and over all, competition was well distributed. The average price per bale for greasy wool during the period at £103/19/- was £11/16/10 higher than the corresponding period of the previous season.

High Costs.

Now, whilst I have referred to satisfactory figures in various sections of our business, I feel that once again increased costs must be referred to. Costs in industry have increased by over 50% in the last three years, and our industry is no exception. Rising costs over which we have no control, call for continuous analysis and are our main problem in the profit result.

J.O. Profit Distribution.

The High Court, on April 13, 1953, decided (by a three to two majority) that about £64 millions paid to Australian woolgrowers by the Federal Government from profits arising from the sale of Australian wool overseas during World War II, was a gift and not liable to income tax.

It is understood there are yet about £28 millions to be paid.

General Conditions.

I have often of recent years referred to the necessity for reduced costs in industry in Australia.

Favourable conditions must continue indefinitely for the present cost structure to be maintained. We know, unfortunately, that do not.

Two main factors contribute to a want of confidence in the future: Firstly, too high costs in industry; secondly, heavy taxation. These must be rectified before we can find a sound prosperity.

Other contributing factors such as incentive payments to those engaged in industry are worthy of the utmost consideration, but without the main contributing factors being corrected, such others will not suffice.

Further inflation, to maintain a fictitious prosperous economy will mean a greater reaction eventually.

As I see it, the only possible alternative to a reduction in wages—the major factor in the cost structure—is greatly increased production. This appears the only sound method of reducing present extreme costs and taxation, and calls for a determined effort throughout the community.

No mean effort will suffice, and it is essential that all recognise that our chance of regaining a sound economy, justify confidence in the future, must be based on acceptance of this

if we wish to secure the highest permanent living standards ch Australia can bestow.
High costs may very well price us out of our export markets. The dangerous suggestion of the unlimited use of Treasury s would end in disaster.
Waves of optimism have continuously pervaded our country e the end of the war in 1945.
Optimism in itself is a fine characteristic and much has oc- ed to justify it in Australia of recent years, in that we have ived extraordinarily high prices for our primary products. vever, is it wise that we should conduct our economy on the s that such conditions will certainly continue, or rather should have regard to the commitments into which we enter based on ething less than the most extreme prosperity of the immediate ?
I suggest that such thoughts are worthy of the serious con- ration of governments as well as of individuals.
One significant aspect in considering the necessity for greater duction, in order to maintain our economy at the present stan- d, is that of the wage rate compared with wool prices in recent rs. Our total production of wool in 1951 amounted to 636 ions when wages moved in sympathy with this spectacular re, including 20/- a week prosperity bonus awarded by the itration Court. The following year wool realised 300 millions . . . There was no downward move in the wage rate, but rather an increase, and today wages are higher than when wool made its record figure.
I refer to this as an indication of the necessity for greater production, for much leeway must be made up if we are to maintain our standards.
Present extreme taxation is a matter which now must receive the earnest attention of Government.
Whilst it is necessary to take a balanced view of the difficulties of Government in the courageous effort made to combat inflation, nevertheless the time has now arrived when there must be a considerable reduction in taxation generally.
It is the main general topic of discussion in the community and calls for a determined effort towards that end.
It is gratifying to note that the Prime Minister has made an announcement indicating that he is fully aware of this necessity, and in what we trust is the first move in tax reduction—abolished Commonwealth Land Tax as from 1st July, 1952.

Staff.

On behalf of the Board of Directors I should like to express our appreciation of the manner in which all sections have given loyal and efficient service, and accordingly convey to them our thanks.

Taubmans Industries Limited

Paint, Varnish, Lacquer, Industrial Coatings and Chemical Manufacturers.

. Office: Mary St., St. Peters, N.S.W. **Melb. Share Register:** 84 William St. **'Phone:** MU 7751. **Directors:** E. G. F. Horne (Chairman), G. S. Reichenbach, R. Simmat (Manag. Director), L. W. Coveney, P. Evans, W. T. Branscombe. **Auditors:** Rettie & Vickery.
ist Year ended September 30, 1952. Meeting January 22, 1953.

Profit was £20,958 lower at £278,226 for a broken period, urning 23.6% on ordinary capital. Dividend was unchanged 15%.

*Credited with share premiums, £130,029, in 1950.

With factories in all states of the Commonwealth and New land, the company produces surface coatings and chemical ecticides.
Results for the year include profits for nine months only m Taubmans (N.S.W.) Pty. Ltd. and Taubmans Chemicals . Ltd. and are therefore not strictly comparable with the vious year.
During the year the paint industry entered a period of te competition. Widespread droughts limited the demand D.D.T. produced by the chemical division, which neverthe- showed a profit.
A new factory was opened in Brisbane in September, 1952. warehouse in Lonsdale Street, Melbourne, has been ac- ed by the Commonwealth and a new factory is under erec- at Sunshine.

NORTHERN MINES DEVELOPMENT N.L.—Negotiations take place between company and Northern Star Gold Mines Ltd. for estigation and drilling by the company of mining leases held Northern Star.

OIL SEARCH LTD.—Omati Test deepened 402 ft. to 13,254 ft.

PEKO (TENNANT CREEK) GOLD MINES N.L.—12/5/53: Report period 23/12/52 to 30/4/53; development confined to the 300 ft. l, where the eastern drive was extended 226 ft. east of the n crosscut, that is, an extension of 120 ft. A fault zone was rsected at 158 ft. from the main crosscut. The driving of No. 2 scut north at 156 ft. east and south at 158 ft. east from the ern drive proved that the lode displacement on the fault was small and payable values were again encountered in the e on the eastern side of the fault at 162 ft. and have continued he present face of the drive.

A further crosscut (No. 3) was driven north and south from eastern drive at 226 ft. east and contacted the hanging wall he north of the drive at 14 ft. and the foot wall at 24 ft. south he drive. Values of the material in the crosscut so far avail- are low. Driving is continuing in 15% copper values.

Dr. M. D. Garretty has joined the Board.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings. Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

* Quotation not granted to this class of security.
‡ Stock.
§ For period.
(a) Dividend in arrears.
(b) Including arrears.
(c) To be issued.
(d) Month in **Black** type indicates usual final dividend month.
(e) Dividends subject to statutory deduction of 4/6 in £1.
(f) Sterling, less Malayan Tax.
(g) Pari passu with "A" ords., but qualified voting rights.
(h) Dividends and capital guaranteed by Swiss Company.
(i) Sterling, but subject to British Income Tax.
(j) Preference dividends paid in full.
(k) Special bonus.
(m) Preference as to dividend only.
(n) Return of capital.
(o) Liquidation payment.
(p) Sterling.
(q) Part dividend tax paid.
(r) Including repayments of capital.
(v) No allowance made for tax rebate (if any) in calculating yield.
(x) Shares allotted to English Dunlop Rubber Co. Ltd.
(y) Rank alike with ordinary shares for dividends and in surplus assets on a winding up after repayment of ordinary capital.
(z) Tax paid.
(A) Based on latest accounts and, in the case of holding companies, latest consolidated accounts, when practicable.
(B) Based on last year's dividend, or rate suggested by an altered interim payment.
(C) Redeemable on or before March 25, 1969.
(D) Repayable after February, 1963, on six months' previous notice.
(E) Debenture capital or Unsecured Notes have been issued ranking ahead of share capital.
(F) Includes 33,250 forfeited shares in hands of company.
(G) Number of shares which can be held by each shareholder—Ballarat 1,000; Equity 1,000; National 1,000; Perpetual 500; Perpetual (N.S.W.) 2,000 until increase of capital; land 5,000 until increase of capital; Sandhurst & N 1,000; Trustees Executors & Agency 500 of origina and 500 of new series; Union 1,000.
(H) Holder has right to convert into ordinary shares befo December, 1956.
(J) Certain participating rights exist.
(K) Holder has right to convert into ordinary shares at p of 2/6 for cash or surrender of notes on 30/6/53.
(M) Redeemable on expiration of 90 days' notice by re holder for the company until April 1, 1960.
(N) Redeemable June, 1954, or earlier on six months' noti
(O) Holder has right to convert into ordinary shares on p of premium of 7/6 between 15th Sept. and 15th Oc
(P) Holder has right to apply for ordinary shares at p of 10/-. Refer to prospectus in Dec., 1952, Official I
(Q) Holder has right to apply for ordinary shares at par May, 1957.
(R) Holder has right to convert into ordinary shares at p December 31, 1955.
(S) Reserve liability per share—Banks—Adelaide £1; A.J Commercial of Sydney £12/10/-; New South Wale Gas—Aust. Gas Light "A" ords. £6—Trustees— £1/5/-; Equity £2; National £1; Perpetual £2/10/-; P (N.S.W.) £5; Queensland £1/2/6; Sandhurst & T 10/-; Trustees Executors & Agency £2/10/- (in add uncalled capital); Union £1.
(T) Holder has right to convert into ordinary shares at p of 5/- on 1st May, 1958, by giving notice before 1 1957.
(V) Redeemable on 60 days' notice by the company in v part at any time after June 30, 1960, at premium centum.
(W) To be issued to Courtaulds of England.
(X) Holder has right to convert into ordinary shares August, 1958.
(Y) Option exists to convert deposits of £13,614 into shares at par during year ended 31/8/55.
(Z) Redeemable at 23/- on 6 months' notice after June 30

*Adjusted figures from prospectus of July, 1951. Profits of the New Zealand subsidiary were converted to Australian in 1949 and 1950, but were included at the New Zealand figure in 1951.
†For fifteen months period.
‡Adjusted for £8,661 taxn. overprovided.

Factories in Melbourne, Sydney and New Zealand produce lacquers and related products manufactured under a long-term licence from American principals. Main users are the motor car industry, makers of furniture, machine tools, household requisites and implements, as well as the electrical trade and latterly, interior decorators.

A new subsidiary was opened in South Australia during the year.

The following address was given by the Chairman, Mr. S. Meltzer, to shareholders at the Annual Meeting on May 14:—

I am sure that you are pleased with the general financial position of the company and its wholly owned subsidiaries.

Liabilities including income taxes amount to only £36,017 which are very comfortably covered by current assets of £103,948.

Stocks on hand of each company have again been maintained at levels considered by your Directors as safe and reasonable.

Plant and machinery has been improved by the addition of new machines, etc., and as usual all plant has been kept in excellent condition. The total value of plant and machinery is £89,859 and same is fully and profitably employed.

The paid-up capital of the company is £110,000 which is covered by net tangible assets of £160,697 without taking into account the very valuable goodwill, patents, trade marks, etc., which cost the company £15,923.

The net profit of the year ended December 31, 1952, amounted to £16,456 after providing for income taxes and an unchanged amount of £750 for the employees' benefit scheme.

This company will carry forward a credit balance of £23,698 after payment of the recommended dividends.

It will be noted that the final ordinary dividend of 3¾% includes 2% paid from tax paid reserves which are now exhausted.

Bonus Issue

You have already received notification of meetings to be held on May 27, 1953, to consider among other things a bonus issue of 15,000 £1 ordinary shares in the proportion of 15 ordinary shares for each 85 held and the subsequent conversion of all ordinary shares into 5/- stock units.

Trading Results

As regards 1953 results, your Directors are of the opinion that same will be satisfactory because the results of all companies to date are good, contracts on hand are satisfactory, stocks are in excellent condition and the strong liquid position of the company enables the group to finance business offering.

*Amounts after payment of tax by the company; rate is gross.

Formed in 1949, the company has substantial funds invested in companies engaged in the production and treatment of base metals, and in other allied industries. These interests include holdings in the following companies—

(i) **The Broken Hill Corporation Ltd.**—A wholly-owned investment company with a substantial interest in New Broken Hill Consolidated Ltd.

(ii) **Consolidated Zinc Pty. Ltd.** (wholly-owned and through that company, including The Zinc Corporation Ltd., a 50% holding in The Broken Hill Associated Smelters Pty. Ltd.

(iii) **The Imperial Smelting Corporation Ltd.** (ordinary capital wholly-owned).

(iv) **Sulphide Corporation Pty. Ltd.** (wholly-owned).

(v) **Zinc Corporation Ltd.** (wholly-owned).

Following the return of lead to private trading the U.K. price fell from £131 per ton in September, 1952, to £73/5/- in April, 1953. Similarly, zinc fell from £110 per ton in September, 1952, to £63/15/- in April, 1953, representing a drop of over 40% in each case. As a result, marginal mines, particularly in U.S.A., have ceased production.

The Chairman's Annual Address, reprinted below, gives a comprehensive picture of the group's activities.

CHANGED PRICE LEVELS AFFECT RESULTS

MR. JOHN R. GOVETT ON GOVERNMENT POLICY.

The 4th Annual General Meeting of The Consolidated Zinc Corporation Limited was held on June 25 at 37 Dover Street, London, W.1. The following is the statement by the Chairman, Mr. John R. Govett, which was circulated to shareholders with the Report and Accounts for year ended December 31, 1952:

The trading balance for the year shows a severe decline compared with 1951 and reflects mainly the fall in the prices of lead and zinc. As a result the profit for the year before taxation amounts to £2,958,759, compared with £7,031,874 for 1951, a decrease of £4,073,115, after charging £769,533 for depreciation, compared with £701,318 in 1951.

The taxation charge reflects not only the lower level of profit and the reduced distribution, but also the manner in which the Taxation Authorities deal with the valuation of concentrate and sinter stocks held by Imperial Smelting Corporation Limited. In each of the last few years when metal prices were rising, substantial amounts of tax have been charged on unrealised stock profits, which have had to be included for tax purposes but which, in our view, cannot properly be regarded as trading profits as they arise only from revaluation, at the average current cost of replacement, of base stocks essential to the maintenance of our business. The converse is applicable in 1952 and, although no provision need be made for the lower value of our base stocks in that they have never been revalued in our books, there is a substantial stock loss chargeable for tax purposes which reduces the charge for taxation by something over £600,000. Taxation on profits the year is thus £1,215,734, compared with £4,483,113 in 1951, the net profit for 1952 amounts to £1,671,150, compared £2,404,708, a reduction of £733,558.

We are recommending a final dividend of 2/- per share, w with the interim dividend of 1/- per share will give a total tribution of 3/- per share. This compares with dividends tota 3/- per share plus a bonus of 1/- per share for 1951.

Appropriations have been made to General Reserve £1,000,000, of which £100,000 has been set aside by the parent pany, and £900,000 by subsidiary companies. This compares £900,000 transferred to General Reserve in 1951, but additio in that year a special appropriation of £350,420 was made to off patent processes and development expenditure which stoo the books at that figure. The surplus carried forward has increased by £107,327, which includes £73,958 for provision longer required in respect of taxation on previous years' pr Capital reserves have been increased by £201,039, largely thr similar credits due to over-provision made for taxation by sidiary companies in earlier years before their acquisition. I the total sum retained by the group out of revenue and ca profits for the year amounts to £1,308,366, which compares £1,747,302 in 1951.

Capital expenditure during the year on buildings, machinery and equipment amounted to £1,773,550, of which £88

ted to the smelting and other plants of Imperial Smelting poration Limited in the United Kingdom. In addition, there e capital commitments outstanding at December 31, 1952, unting to £2,305,000, in which is included approximately 00,000 for new acid and superphosphate plant to be erected by hide Corporation Pty. Ltd. at Cockle Creek, New South Wales. ing the last quarter of the year, as soon as it appeared that re might be a sustained change in the price levels for lead and , and therefore in the financial outlook for the Group, a com- hensive review was made of all capital projects included in the ent programme, and also of all capital commitments outstand- Wherever justified, capital expenditure on current projects is g curtailed and authority to proceed with new projects is be- given only where there is real necessity or where the expected nomic benefit to be derived from the expenditure is exceptional.

Markets and Prices.

The year 1952 was one of disillusionment and disappointment ead/zinc producers. Scarcely had the exhortations of both U.S. U.K. Governments to increase production become less intense h high prices and restrictions of use began to affect consump- . Current production was already in excess of current require- ts at the time when the U.K. Government decided to return e metals to private trading. This step presented a number of cult problems, particularly as it involved the question of Gov- ment stock disposal. Unhappily, it would seem that the sures to solve these problems were not as well contrived as might have been. The price of lead, which in the U.K. was on September 30, 1952, fell rapidly on the open market, until eached £73/5/- on April 23, 1953. In the case of zinc a similar ture can be shown; the price on December 31, prior to the ning of the market, was £110, and a low of £63/15/- was reached April 23, 1953. The resultant losses have been shared by pro- ers throughout the world, and must have totalled many millions pounds. If the stocks that have been released have eventually e into consumption, they have presumably done so only as a lt of the closing down of mines, mostly in the United States America. So we have this situation, namely, that in 1951 our pective Governments were clamouring for supplies and giving ry inducement for new production, whilst in 1952 some of the established mines of the U.S.A. could no longer operate econo- ally, and their remaining ore reserves may be lost indefinitely.

Now I must mention another painful matter, namely, the long- n contracts which Governments have entered into with new h-cost producers at floor prices, which are now well above any ings that established producers can hope to reach. Thus sub- sed metals from these high-cost producers will be added to rket supplies, and some old-established efficient producers may closed down to make way for this metal.

In my address last year I indicated that some part of the in- ities of Australian price control might soon be removed. As a lt of repeated applications by the Broken Hill producers, the tes' Prices Ministers consented to an increase in price from £A65 £A95 for both lead and zinc, to take effect as from September 4 . This increase in price, however, in the case of zinc was nted only on the condition that the industry made an additional nage available to Australian fabricators, hence at that time gain was tempered by the reduced tonnage available for the ort market. A further and final step was taken on April 17 of s year by the States' Prices Ministers, when they removed price trol from lead and zinc on the condition that the prices charged Australian domestic consumers should not be greater than those ng for export. Although consumption of zinc in Australia was y maintained during the year 1952, lead requirements fell short the tonnage that had been allocated to the domestic market.

I am indeed hopeful that at the prevailing level of prices. sumption of our metals will expand rapidly for civilian use, that a ready market will be found for our increasing produc- .

referred in my statement last year to the establishment of a ll subsidiary company in Canada—The Consolidated Zinc Cor- ation of Canada Limited. This company is still very much in infancy, but its first year has been well spent in gaining in- mation on the base metal mining potentialities of various dis- ts in Canada. It has also continued to provide useful services connection with the marketing in Canada of certain of our pro- ts.

In June last, Dr. W. G. Hiscock, General Manager of the elting group in the United Kingdom and a Director of Imperial elting Corporation Limited, was appointed a Director of your mpany. In welcoming him to the Board, I would like to say y much my colleagues and I value the contribution he makes our counsels.

I would like to conclude by repeating what is probably already preciated by all shareholders, and that is that our position has nged with much rapidity from one of great prosperity as a re- t of very high metal prices, to one where profits are greatly uced, and, indeed, can only be achieved with the utmost energy l efficiency on the part of all.

None of you, I know, will accuse us of having been lavish in distribution of dividends during our four years of existence, equally do I believe we have had your full approval to the ention in the business of comparatively large sums of money; se I can assure you have been—and will be—fully required, ecially in view of the difficult times which appear to lie ahead.

I do not wish to conclude this statement on too gloomy a note, let me add one word of a happier nature—we have built up a endid organisation both in the United Kingdom and in Aus- lia, our properties are in first-class order, and every opportun- is being taken both in exploration for minerals and in the de- opment of new processes, which we consider will be of benefit your Company. The spirits of all, management, staff and men, ains high, and, if I may, I would like to thank them on your alf for their contribution to a successful year.

SUMMARY OF ACTIVITIES

THE UNITED KINGDOM

Imperial Smelting Corporation Limited.

In 1951, transport difficulties in Australia slowed down the railing of zinc concentrates (concentrated zinc ores) from our own mines at Broken Hill so that we were unable to operate our smelting plants in the United Kingdom to full capacity. During 1952 this position was reversed and much of our accumulated stockpile of zinc concentrates has been shipped to our smelters, so that for the time being we have made less call on outside sources of zinc concentrates. Our production of virgin zinc metal could therefore be increased again during 1952, and by the end of the year it was running at a record rate.

For the first five months of 1952 the prices realised for our zinc metal continued at the unprecedentedly high levels to which they were raised towards the end of 1951, and to which reference has been made in the preceding statement. Allocations of zinc metal by the International Materials Conference to its member countries were stepped up in the second and third quarters of 1952 and, with a concurrently diminishing demand partly due to a protracted steel strike in U.S.A., the zinc price fell. This price was further depressed by the British Government's announcement that the London Metal Exchange would be reopened in zinc in January, 1953, coupled with the knowledge then becoming available of the very high stocks held by the British Government.

Sales of the Mazak alloys opened well at the beginning of 1952 but were not sustained, largely owing to a lower demand for die-castings for the motor industry. This followed partly from the reduction which then took place in Britain's export markets for cars, particularly to Australia, and was also due in part to a reduction in diecasters' stock levels when fears of supply shortages had been removed and when a continuing fall in zinc price seemed probable.

During the latter part of 1952 customers for some of our subsidiary zinc products such as zinc oxide and zinc pigments allowed their stocks to run down in the anticipation of a price fall. As a result a number of our products were affected and outputs had to be curtailed. Earlier in 1952 there had been a general recession in many trades in the United Kingdom, including the textile and paper trades, which resulted in a reduced demand for sulphuric acid required directly or indirectly in the production of these commodities. Also, due to world sulphur shortage, controls had been imposed on the consumption of sulphuric acid in the fertiliser industry, and the aftermath of this reduction was felt in the first part of 1952. Averaged over the whole year these setbacks resulted in some reduction in demand for our sulphuric acid, but the difficulties had been in the main surmounted before the close of the period. The pigment trade of the country also suffered from the general decline in trade already referred to, and our production of lithopone had therefore to be cut back to a much reduced level, and simultaneously our rate of mining barytes was reduced to conform with our lower pigment output. It was only towards the end of 1952 that there were signs of recovery in the demand for our various pigments.

There was a steady increase in our production of cadmium, one of the subsidiary metals present in our ores which is extracted from certain residuals of zinc smelting, and due to improvements in methods and efficiencies our cadmium output for 1952 was the highest on record.

Among our other manufactures, record sales were achieved of Cuprinol timber and fabric preservatives, partly for Government requirements. A substantial contract was entered into for the supply of anhydrous hydrofluoric acid, and the development of our fluorine products continued in a satisfactory manner, such as for boron trifluoride used in special brazing applications for the aircraft industry.

Our programme of modernisation was delayed during the early part of 1952 due to difficulties in obtaining construction materials. In spite of this, however, the pyrites-burning sulphuric acid plant at the Swansea Vale smelter was substantially completed by the end of the year, and similar equipment at Avonmouth was sufficiently advanced to be ready for starting in the spring of 1953.

Development of our "Imperial Smelting Process" for smelting zinc, or zinc associated with lead and certain other metals, made very good progress. A second commercial size unit was added, and by the end of 1952 this process was making substantial contributions to our production of zinc metal. Concurrently it has been found possible to fit additional retorts into our existing vertical retort zinc smelting plant, and this extension should be completed by the end of 1953. The new zinc smelting plants will add substantially to our up-to-date equipment, so that a considerable proportion of the modernisation scheme which we instituted as soon as conditions permitted after the war, has already been installed.

A very full programme of research work continues in our modern and well-equipped research laboratories, resulting in the important smelting and other developments referred to above. In our pigment research section, much effort has been directed to improving and expanding our range of pigment products, which has resulted in the manufacture of lithopone of increased strength and whiteness, while research continues vigorously on the application of the latest scientific discoveries in the field of surface chemistry to the production of still higher strength and more economical zinc pigments.

Associated enterprises in which we have investments, namely, British Titan Products Co. Ltd., Fisons Ltd., Capper Pass & Son Ltd., and The Wolverhampton Metal Co. Ltd., have again achieved good trading results and we much appreciate the wide basis of interest and exchange of information which liaison with these successful enterprises gives us.

The difficulties arising from the recession in trade mentioned above have inevitably had repercussions on our personnel. By

(Continued on next page)

CONSOLIDATED ZINC CORPORATION (Contd.)—

modifying our recruitment policy and transferring employees to other work, employment has in most cases been maintained, and notwithstanding the sharp fall in the demand for some products very few regular employees of the Corporation have been compelled to seek other work. Our established courses for training and education were continued and some special demands were met. For instance, during 1952 we experienced a difficulty in securing fresh instrument technicians, particularly for our new developments, and this situation was met by training members of our own staff to take over these new responsibilities. The fall in the value of money in the past 10 years has lowered the value of our Workmen's Pension Scheme and, after consultation with our employees, it was decided to share equally the cost of providing higher pensions on a contributory basis.

The Corporation has long been justly proud of the co-operation and high morale of all engaged in our industry, and in this period of changing conditions of trade these attributes have been of inestimable value and allow us to face the future with confidence.

AUSTRALIA

The Zinc Corporation, Limited

During 1952, the mine worked 229½ days. No major industrial disputes occurred, but 4 days were lost through stopwork days during the negotiations on the new industrial agreement, and 2½ days through two minor disputes.

The tons mined amounted to 447,344, the average tons per working day being 1,949, compared with 440,040 tons at the rate of 1,905 tons per working day in 1951.

Year	Ore milled tons	Lead per cent.	Silver ounces	Zinc per cent.
1952	449,282	13.5	3.1	11.2
1951	440,302	14.3	3.1	11.7

The year's production of lead and zinc concentrates compared with 1951 as follows:

Year	Ore milled, tons	Containing: Lead Concentrates Produced, tons	Recoverable Lead, tons	Silver, ounces	Zinc Concentrates Produced, tons	Grade per cent. Zinc.
1952	449,282	77,214	56,583	1,329,293	87,353	52.6
1951	440,302	80,789	58,982	1,283,819	88,872	52.4

In addition, the Zinc Corporation milled 190,368 tons mined by New Broken Hill Consolidated, making a total of 639,650 tons treated, as compared with 651,910 tons in 1951. Metallurgical efficiencies were again satisfactory.

Total sales in 1952, as compared with 1951, were as follows:

Year	Recoverable Lead tons	Silver, ounces	Zinc Concentrates tons
1952	52,830	1,265,934	59,887
1951	62,582	1,288,152	35,999

Realisations during 1952 were made on the basis of the following average metal prices, expressed in United Kingdom currency, compared with 1951:

Year	Lead: Australia per ton £ s. d.	Lead: Other Countries per ton £ s. d.	Silver: pence per oz.	Zinc: Australia per ton £ s. d.	Zinc: Other Countries per ton £ s. d.
1952	62 6 2	114 3 9	74.85	59 19 4	139 18 9
1951	53 6 9	147 9 10	79.67	50 10 0	176 10 7

In 1952, lead sales in Australia were 20.7 per cent. of the total sales and those to other countries 79.3 per cent. The Company's contribution to the Australian domestic zinc requirements amounted to 33.7 per cent. of its production.

The resale of ore to the Zinc Corporation by New Broken Hill Consolidated Limited, in replacement of the tonnage purchased by the latter Company under the Sale of Ore Agreement, has been deferred.

The general development of the Mine, mainly on Nos. 15, 16, 17 and 18 Levels, proceeded normally. Major works in progress included:

1. Sinking of the main shaft to 60 ft. below No. 21 Level.
2. Stripping and concreting of No. 2 upcast airway. This work had reached 1,200 ft. below the collar at the end of the year after delays due to a blockage in the pilot winze through which mullock is drawn and which has again delayed operations in the current year.
3. Sinking and equipping No. 2 sandpass from the surface.
4. Extension of No. 1 upcast airway from No. 16 Level to No. 18 Level.

The completion of these operations in 1953, particularly those dealing with the improvement of the ventilating system, will prove of great benefit in our operations in the future.

The blocked-out ore reserves improved and, at the end of the year, amounted to:

		Lead p.c.	Silver oz.
Lead lode ..	5,300,000 tons, assaying ..	15.4	3.1
Zinc lode ..	500,000 tons, assaying ..	6.8	1.4
Total	5,800,000 tons, assaying ..	14.7	3.0

This represents an increase of 100,000 tons in lead lode. T is little change in average grade.

Mechanisation of operations was continued with the intr tion of additional scraper hoists, hydraulic boom drill carr and additional items of smaller equipment. Drilling with hammer-airleg combinations and tungsten carbide tipped stee Throwaway bits was extended, and the majority of open st parties are now equipped with this type of drilling equipmer

Blasting with milli-second-delay electric detonators wa troduced in a number of open stopes and, in these cases, imp fragmentation of ore was obtained.

Despite these mechanical aids, general efficiencies hav mained almost static with a slight increase only in overall ency in 1952. 1953 has commenced with a further slight inc and we are more hopeful that the policy of supplying the mechanical equipment, coupled with good working condition slowly bearing fruit, to the advantage of the employees and selves. As a further step in the aim for increased efficiencies Mining Engineering Department was formed to take over the ning research and ventilation sections of our mining operat Improved results are being obtained from their studies, and work of the department will be intensified. Also, in 1953, a training department, under the direction of an experienced o will be created, and we look forward to seeing the results o application of modern industrial training.

The incidence of lost-time accidents continues to lessen, the efforts of our mine staff have been rewarded with steadily proved results. It is fitting to note, and is a matter for congra tion to our own staff and employees, together with those o other mining companies at Broken Hill, that in 1952, for the time, no fatal accident occurred in the Broken Hill mines.

Construction of the following major surface plant was tinued:

1. The extension to the changehouse was completed and new assay laboratory was recently occupied.
2. Construction of the concrete evasee and fan motor at the No. 2 upcast airway is in progress. The 2 diameter Walker-Macard axial-flow fan is now being livered to the mine and will be installed at the end of when the No. 2 upcast airway is due to be completed. modern fan will deliver 900,000 cubic feet of air per m and will result in further improvement in ventilation ditions in the mine.

It is also pleasing to report that the transport positio tween Broken Hill and Port Pirie has continued to improve the addition of more men, locomotives and large trucks, and now appears to be ample capacity to provide for the requiren of the industry.

Some difficulty was experienced with the operation of the m fied residential classification for employment introduced in which restricted recruitment of men in the new classificatio the greater part of the year. Early in the current year this culty was at least temporarily overcome, but the provision o adequate intake of new men remains a problem.

Despite the fact that the negotiations for the completion new Industrial Agreement have been protracted—the old A ment being due to expire in August, 1952—the industrial situ at Broken Hill was satisfactory. Negotiations for the new A ment were completed in April, 1953, following on voluntary ferences under a Conciliation Commissioner nominated by Registrar of the Industrial Court of New South Wales. The points of difference between the parties related to the qual tions for long-service leave, in particular in respect of past vice. In 1951 the New South Wales Parliament passed an Am ment to the New South Wales Industrial Arbitration Act ma it obligatory for employers in that State to provide long-se leave for their employees of three months for twenty years' tinuous service. Broken Hill was exempted from the provisio this Act on the understanding that corresponding benefits be granted by voluntary agreement retrospective to July 1, The long-service leave provisions now included in the new I trial Agreement are in many respects more favourable tha provisions of the Act, but are considered fair, having rega the conditions in the Broken Hill industry.

Rainfall in 1952 was up to average, being 991 points, bu fortunately, the rains fell evenly throughout the year and intakes into the reservoirs resulted. Emergency conditions n sitating the railing of water from the River Darling existed June 13, 1952, when the 24-in. diameter pipeline was comp and water was pumped into Broken Hill.

The various employees' housing schemes now being carrie in association with New Broken Hill Consolidated Ltd. have gressed satisfactorily. Through the Co-operative Societies the number of houses financed up to 1950 was 456; this figure incr to 607 by the end of 1951 and to 694 by the end of 1952.

NEW BROKEN HILL CONSOLIDATED LIMITED.

In September last, progress in connection with the pro of shaft and mill facilities reached the stage at which, for the time, ore hauled through the Company's shaft was milled own mill. The new mill operated very satisfactorily on a shift-per-day basis, with the expected high standard of met gical efficiency. A proportion of the production is still treated in the Zinc Corporation's mill, and this will continue completion and operation of the service shaft, expected in 1

Ore production from the Company's leases totalled 239,922 tons 1952, compared with 212,178 tons in 1951. During the year, 178 tons were treated on the Company's account, 45,110 tons in new mill and the balance in the Zinc Corporation's mill. Sales were less than production by 1,536 tons of recoverable , 24,726 ounces of silver, and 957 tons of zinc concentrates. average prices realised for metals sold during the year do materially differ from those obtained by the Zinc Corporation. The ore reserves at the end of 1952 were as follows:

	Lead %	Silver ozs.	Zinc %
ve No. 16 Level, 800,000 tons, assaying	5.2	1.0	14.2
ow No. 16 Level, 1,600,000 tons, assaying	13.3	3.4	9.3
l, 2,400,000 tons, assaying	10.6	2.6	10.9

Since production first started, just over a million tons of ore e been produced from the Company's leases.
In addition to the completion of the skip winder on the haul- shaft and the commissioning of the new mill, the surface plat the No. 1 changehouse were completed during the year and ght into use. The building accommodating the technical staff, ey staff and ambulance room and the maintenance building e been completed and occupied. The concrete headframe for service shaft is now under construction, and the 2,600 h.p. n cage winder for operation in this shaft is now being installed. In spite of difficulty in obtaining full requirements of man- er, a high proportion of the available production stopes have n manned during the year and satisfactory progress has been e in the planned development work, particularly in opening up lead lode ore bodies at the lower levels.

BROKEN HILL ASSOCIATED SMELTERS PTY. LIMITED.

The Broken Hill Associated Smelters Pty. Limited, jointly ed with North Broken Hill Limited and Broken Hill South ited, has continued to treat at its lead smelter at Port Pirie, th Australia, the output of lead concentrates from the Broken field. Operations continued normally throughout the year, ex- for two interruptions as a result of disputes with the unions; first occurring from June 1 to June 5, and the second from ember 23 until January 30 this year. This latter stoppage owed a breakdown in the negotiations for a new Industrial eement, on which a satisfactory settlement was finally reached. Company has completed the erection of a contact plant for production of sulphuric acid, and it is expected that this plant come into partial production during the second half of this . In the initial stages, acid will be produced with sulphur as raw material, but this is only a temporary expedient to pro- e at an early date the increased quantities of acid required by superphosphate industry in South Australia; the plant is de- ed to treat the sulphur gases available from the roasting of concentrates, and the roasting and gas cleaning plants are under construction.

SULPHIDE CORPORATION PTY. LIMITED.

This Company has continued to produce sulphuric acid, fer- ers and cement at Cockle Creek, New South Wales, and trad- results for the year have shown a considerable improvement those for the previous year.
On 29th October, following 12 months' prior notice, the agree- t with the Electrolytic Zinc Company of Australasia, under ch the Company roasted zinc concentrates on behalf of the trolytic Zinc Company in a plant belonging to that Company Cockle Creek, terminated. As a result, the roasting of zinc entrates was discontinued, and the plant was adapted to roast tes.
The Company also has on hand the construction of a new act plant for the production of sulphuric acid and the in- lation of two turbulent layer roasters to burn pyrites. Exten- s to the superphosphate plant have also been commenced.

CONSOLIDATED ZINC PTY. LTD.

The results achieved by the main subsidiaries of this Australian pany can be summarised as follows:—

Heron's Creek Timber Mills Pty. Limited.

The modernisation of the timber mills continued throughout year, resulting in higher output despite electricity rationing. Company has continued to supply a major portion of the timber requirements of the Zinc Corporation and New Broken Consolidated. Sales of building sizes of timber tended, how- to decline in the latter half of the year, mainly on account slackness in the building trade, and the availability of large ks of imported timber. The Company's forest areas have re- ed free of damage from bush fires, and reafforestation has inued normally.

Titanium and Zirconium Industries Pty. Limited.

Increased production of rutile and zircon has been available as sult of extensions and modifications to the existing separation t and generally the final products continue to be of a high allurgical grade. A preliminary assessment has been made of extent to which production could be further increased should re developments of titanium and zirconium metals and de- ds by other consumers of rutile and zircon in the U.S.A. and justify an expansion in output. Rutile prices have shown a ual increase, and are now almost double those ruling at the of 1951, as the availability of the material continues to be fficient to meet all requirements. On the other hand, zircon es have remained at a low level on account of limited demand, nly in the field of refractories. All the zircon produced was ped to U.S.A. and the Continent, and most of the rutile to the U.K. A pilot plant for the production of monazite concentrates commenced operations on a small scale towards the end of the year.

Southern Power Corporation Pty. Limited.

The Southern Power Station has operated satisfactorily throughout the year. A fifth diesel-electric generating set of 2,370 kw. has been added to the four which were installed in 1950, and is now in commission. Two Alley & MacLellan motor-driven air compressors are now operating, and a third is in the course of erection.

Enterprise Exploration Company Pty. Limited.

This Company has continued a wide search for new mineral deposits in Australia. Whilst some of the prospects examined have not lived up to the expectations afforded by preliminary reconnaissance, further investigation of others appears justified, and is being carried out in various parts of the Commonwealth. Diamond-drilling services have also been provided by this Company in the Broken Hill field and elsewhere in Australia.

Throwaway Bit Corporation Pty. Limited.

The production of steel detachable drilling bits by this Company, which is jointly owned with the Perry Engineering Company Limited, was suspended towards the end of 1952, when a sufficient stock of bits had been built up to meet known requirements over the next two years. While it was in operation, this plant has done all that was expected of it, maintaining a high standard of output at a cost factor in line with the original estimates. However, since the manufacture of this type of detachable drilling bit was commenced some two years ago, there has been a considerable change in underground drilling practice in most parts of the world, and particularly in Australia, through the introduction of jackhammer-air-leg combinations using tungsten carbide tipped integral drill heads. There are, however, uses in medium and soft rock formations for which the steel detachable bit still has an advantage over other types, and the future of this plant is being kept under close review.

Territory Enterprises Pty. Limited.

During the year, Consolidated Zinc Proprietary Limited agreed to undertake, on behalf of the Government of the Commonwealth of Australia, the management and operation of the uranium mining project at Rum Jungle, in the Northern Territory and, in October, a subsidiary company—Territory Enterprises Pty. Limited —was incorporated to perform this task. Responsibility for operations in the area was not assumed until 1st January, 1953, the new Company's activities late in 1952 being limited to preliminary planning.

19th Year ended December 31, 1952. Meeting May 29, 1953.

Consolidated profit of £440,845 was £17,000 lower than last ar's record, after reduced depreciation of £358,342 (last year 65,025, including £400,000 stock and plant depreciation con-gency). Ordinary dividend was again 12½%, being twice vered by available profits. Trading was difficult, and sales creased by 14%, due to the reduced demand for consumer ods.

In an informative address to shareholders at the Annual Meet-g on May 29, the Chairman, Mr. J. I. Carroll, said:

I am sure shareholders will have appreciated the satisfactory tcome of the year's trading so far as the profit is concerned. I ould, however, mention to you the difficult conditions which we ve experienced during almost the whole of 1952.

Sales and Profits.

You will remember at our last annual meeting I referred to e rapid decline in sales of certain consumer goods, which set in ring April and May. This tendency continued until the latter rt of the year, resulting in a decrease in sales of over 14% for e year, as against the previous year.

I find it difficult, as no doubt do many other shareholders, to derstand why there should have been such a sudden recession our economic conditions following a period of unprecedented ersea exports and internal prosperity.

The profit of your parent company for the year was £306,027, nich represented the small decrease of £5,098 under our record last year. The carry forward of profit was increased by £86,860 £303,366. The aggregate profit of your parent company, subliaries and affiliated companies was £440,845, a decrease of 6,639, as against last year. The carry forward in the profit and ss account was increased by £222,420 to £822,839.

Your Directors are recommending that a dividend and bonus e same as last year be paid; that is, a dividend of 10% and a nus of 2½%, making 12½% in all on the ordinary stock of the mpany. As an interim dividend of 5% was paid in October last, e final dividend now recommended is an amount of 5% plus a nus of 2½%, making the total payment of 12½% for the whole ar.

A dividend of 6% on the preference shares was paid during e year, for which your confirmation is now also sought.

Parent Company's Accounts.

You will notice in the parent company's accounts that the sub-ibed capital has increased by £50,737. This resulted from an ue of 202,950 5/- stock units issued at a premium of 5/- each exchange for the whole of the subscribed capital in Wildon y. Ltd. This, of course, also accounts for the increase in share emium reserve.

The reason for this acquisition was to retain the tenancy of the building which was occupied by one of our Melbourne subsidiaries.

The Wildon acquisition is reflected on the assets side in the increase in our holdings in subsidiary companies.

Consolidated Accounts.

Referring to the consolidated statement, you will notice quite a few changes. The reasons for the increase in subscribed capital and share premium reserve have just been explained. Sundry trade and other creditors have increased by £875,719, and this has been brought about by the substantial contracts which were current at the end of the year and to heavy receipt of stocks towards the close of the year.

Taxation, service and other provisions have increased by £357,162, due in large measure to fluctuation in payment dates of taxation assessments and also to some additional provisions for contingencies.

The decrease of £287,020 in sundry trade and other debtors is accounted for by the drop in sales for the year as against the previous year.

The substantial increase of £2,003,096 in stocks and contracts in progress is due to the receipt of substantial deliveries of materials towards the end of the year and the very large contracts in progress for the installation of electric power stations.

The increase of £271,098 for fixed assets is accounted for by the purchase of buildings and additional plant for several of our subsidiaries.

The increase of £49,869 in excess of cost over par value of shares is due to the Wildon share purchase.

Depreciation.

You will remember that in the last few years we have provided a special item in the accounts known as the special stock and plant depreciation contingency reserve, which, at December 31, 1951, amounted to £1,000,000. During the year under review it was not deemed necessary to make any further addition to this reserve, but depreciation has been adequately provided for in the accounts to ensure that our stocks are conservatively valued in relation to current day prices. This involved a considerable writing off in stock values, particularly with regard to oversea purchases of steel and non-ferrous metals.

£358,342 was provided for depreciation of fixed assets.

(Continued on next page)

EMAIL (Contd.)—

Power Plant Contracts.

Since our last meeting, when I referred to the power plant contracts that your organisation had in hand, we have made very substantial progress.

These contracts covered seven Westinghouse power stations and two diesel installations, and it is pleasing to record that the plants at Abermain, Queensland, Port Kembla, Penrith, Kempsey and Brookvale in New South Wales, are now in operation, whilst the remaining stations in Victoria and New South Wales are in an advanced stage of construction, and should progressively be operating by the end of the year.

Allied Credits Pty. Ltd.

Shareholders will have noticed that recently we formed a subsidiary company known as Allied Credits Pty. Ltd.

From time to time our distributors and dealers have experienced difficulty in securing facilities for hire purchase finance, because the finance companies engaged in this business are finding it necessary for various reasons to restrict the amount of finance they were willing to provide.

As you will understand, the successful operations of the distributors and dealers who sell our appliance lines depend very largely upon an adequate and continuous supply of hire purchase finance. The establishment of Allied Credits Pty. Ltd. will enable us to assist in meeting this need.

That is the only reason for the establishment of this company. We very much appreciate the assistance we have received and are still receiving from the established finance companies, and it is not our intention to engage in competition with them.

Allied Credits Pty. Ltd. has commenced operations and is already handling quite a volume of business.

Email Services Pty. Ltd.

Another subsidiary company formed during the year was Email Services Pty. Ltd.

This company has been formed to co-ordinate the servicing activities of our various subsidiaries and thereby will provide more efficient facilities for the servicing of our products.

Taxation Allowance on Initial Depreciation.

In my remarks last year I referred particularly to the Government's action in withdrawing the taxation allowance for initial depreciation of plant. Whatever reasons there may have been for discontinuing this allowance, surely those conditions do not now exist. I therefore draw attention to the matter again.

The Government so far has failed to recognise the urgency of the restoration of this initial depreciation allowance. Mr. Butler, the British Chancellor, dealt very differently with British industry. He provided in the British Budget for a 20% continuing concession as a stimulus towards increased investment in plant and higher output and lower costs. I trust that in the near future Australian industry may receive a similar stimulus in the form of a reinstatement of the former provision, so that at least the Australian manufacturer will not be at this further disadvantage compared with his British competitor.

Wage Costs.

At our last annual meeting I spoke at some length concerning the serious situation in which Australia was placed due to its constantly increasing wage costs, and I also referred to the trade and tariff agreements in which we were involved. I ventured to suggest that it was urgent that steps should be taken to deal with these matters and what action I thought might be helpful.

Unfortunately, the basic wage has continued to rise and the position to deteriorate still further without any apparent effective corrective action being taken.

There will be no need for me to repeat what I then said, as shareholders will no doubt read the comments and warnings constantly appearing in our press from responsible and well-informed leaders of industry and commerce. Indeed, one well known economic research publication goes so far as to say that "the Australian basic wage system contains the seeds of economic disaster." To say the least, our economy at the moment appears to be uncertainly poised between progress and recession.

Many Australian industries, including several in your group of companies, are relying in a large measure on the protection from overseas competition, which is given to them by the restrictions imposed on imports by the licensing system. The Government has made it clear, however, that this system was established to preserve London funds and will not be used to protect Australian industry. It will be removed when no longer required for the purpose for which it was established.

In these circumstances we are forced to look and hope for more permanent measures to be instituted to establish stable and balanced operating conditions. In fact, with no change in trade policy, there appear to be two main alternatives. We may adjust our wage level, or we may depreciate our currency to achieve equilibrium in a monetary way.

Until something of a lasting nature is done, we will live in a world of uncertainties, of short-term emergent policies and therefore of natural hesitancy by industry to develop those long run expansion plans upon which progress so intimately depends.

In the absence of a forthright and direct attack by the Government on this problem, it is only natural that manufacturers are being forced to seek a greater measure of tariff protection.

We have in the main good management and efficient workers, but it is just a matter of simple arithmetic; we cannot pay twice the wages and still compete. Therefore, the future success of Australian manufacturers, including, of course, your own manufacturing companies, depends to a very large degree on decisions which the Government must now make.

Conclusion.

In conclusion, I would again take this opportunity of expressing appreciation to our executives, our staff and all of our employees for their splendid work and co-operation throughout the year.

John Buncle Commando Limited

Things some men talk about.....

. . . particularly in the restful atmosphere of their club, often touch upon things personal. Last night, for instance, Frank brought up the subject of wills—he had recently revised his in view of the changing circumstances of to-day and the possibilities of the future and intended appointing a trustee company as executor . . .
He asked my opinion of the appointment of a trustee company as executor to which I replied, ". . . well,

wise men do.....

and, to be perfectly frank, I think it is the best idea; after all, you have broad interests, business interests, I mean . . . you're interested in the share market, real estate, and there is, of course, the business itself. I think you have done wisely appointing a firm of Trustees—the National—to look after your family's interests . . .

National Trustees is the complete *Trustee organisation providing a staff of specialists in every phase of business and estate management—a* permanent *organisation that will carry out your wishes for your family with the same personal attention you would give to those matters yourself. Free literature giving details of NATIONAL TRUSTEES comprehensive service is available on request, by 'phone or mail.*

In addressing stockholders at the Annual Meeting held on June 26, the Chairman, Mr. C. York Syme, reported that a record number of bales of wool was received. Mr. Syme said:

I would first like to make reference to the great loss we have sustained in the death of our late Chairman, Mr. K. M. Niall. When he died in April last, he had been Chairman of this company for 18 years, and he had been a Director for 16 years before he became Chairman. He was untiring in his devotion to the company's affairs and to the pastoral industry in general. His energy and enthusiasm accounted for a very great deal of our progress, and in a personal as well as in a business way we have missed and will continue to miss him very much indeed. We are fortunate that he left a suitable successor to his seat on the Board in the person of a son, Mr. G. M. Niall. With his appointment we have been able to maintain the tradition of having a member of the Niall family associated with the control of the company since Mr. J. M. Niall was appointed General Manager in 1900.

The Board appointed me as its Chairman in place of Mr. K. M. Niall.

Balance Sheet.

Liabilities show a substantial reduction as compared with last year, but you will recall that they were unusually large last year, due mainly to credit balances held for clients to meet the heavy income tax assessments which became payable in April/June, 1952. The book value of premises has again increased very substantially, largely due to major additions to our wool stores in Adelaide and Perth, a small addition in Melbourne, and purchase of A.W.R.C. Stores in Newcastle. In Adelaide our wool receipts are now nearly 50% higher than in the last pre-war season, and in Perth over 100% higher. The store extensions in these places are now becoming fully available and will provide effective facilities for handling the increased business.

Stocks — mainly merchandise — show a substantial reduction from the abnormally high figures recorded last year. For reasons mentioned later, the resumption of Station properties has had little effect on the balance sheet figures.

Profit and Loss Account.

The wool clip this season has shown a marked increase in the Eastern States and in South Australia. The total of receipts into the company's stores, viz., 445,000 bales, constitutes a record. We handled about 9,000 bales more than in the previous year and, because of the well-grown clip, the bales averaged nearly 6 lbs. heavier. The carry-forward is up considerably.

We handled a greater number of stock than in the previous year — sheep sold totalling 5,200,000 as against just under 4 million; the cattle total at 445,000 was up by 10,000, and pigs at 120,000 slightly down. The value of land sold — £4,600,000 — nearly £2,000,000 lower than last year.

The reduction in merchandise turnover was not great, p owing to increased prices ruling for superphosphate and packs. Recently the price of woolpacks has been reduced by a pack.

Expenses continue to increase, although quite a substa proportion of the present year's rise relates to the incr amount of wool and stock handled.

We have received some benefit from the cancellation of Fe Land Tax, but you will see that the total required under various taxation headings exceeds the net profit for the year

Despite the continued high rate of taxation, the ratio o profits to stockholders' funds has been more than maintained the main reason for this position lies in the high prices for stock and land that have been ruling in recent years. The ri the prices of the commodities we handle has been far gr than the rise in stockholders' funds, and consequently the ra profits to stockholders' funds is higher than it was in pr years. As a natural corollary, our liquid position is less s than it used to be, and it has become increasingly difficult to the legitimate calls of our clients and to provide for the ess expansion of our wool store accommodation and other faci The retention of part of our profits has in the past helped this direction, and we have been greatly assisted by the fact Australia as a whole has been free from a major drought for years. We cannot expect our good fortune in this regard to tinue indefinitely, nor can we assume that a general fall i price level will reduce our working capital requirements. It i state of affairs which led your Board to decide to increas amount of the company's share capital, this being necessary i opinion for the satisfactory conduct of our existing business, some margin to provide for a drought or other like emerge

Company's Own Properties.

Seasonal conditions for the year have been favourable. lambings have resulted and the prospects for the current y are good — all sheep being in excellent condition and the pa assured for some time ahead. Rabbits have been greatly re but blowflies have given some trouble.

You have been advised in recent years of the serious eff our earning capacity to be anticipated from the resumption of portions of our four Stations situated in the Western Divis New South Wales. Some country has already been lost and f blocks will be lost periodically until the final resumption in 1955.

The effect on our balance sheet will not be great as ad provision has been made for this contingency, but you will

our Profit and Loss Account must suffer considerably. Dur- the current year we will have to lighten down sheep numbers. se sales will assist profits temporarily, but the ultimate result his arbitrary resumption will be that stockholders will be los- the net income from approximately 75,000 sheep.

You will have noticed that the High Court has recently held the wool profits distributions under the 1948 Act are not ject to income tax. The Government has announced that it is ing an appeal to the Privy Council, and until the case is finally ded we are maintaining the taxation provision already made. have, of course, lodged the objections necessary to protect our ts if the final decision is favourable.

Pests.

The dingo continues to be a serious problem in Central and thern Queensland and in many other districts adjacent to ken country. Noogoora burr has increased, particularly on ded areas. The blowfly has been troublesome, although it has n satisfactorily coped with in most districts.

The rabbit pest has been very markedly reduced as a result nyxomatosis, and the follow-up efforts of landholders, and bene- in increased carrying capacity are obvious in many districts. le it appears that the disease is not the complete answer to rabbit, it may serve to prevent infestations of plague propor- s, such as the pastoral country has been subject to from time ime in the past.

THE SEASON in **New South Wales** has generally been very urable excepting for the Central West, South-West and West- Riverina which missed the good summer break experienced by rest of the State.

In **Queensland** severe drought conditions existed in 1952, but l relief rains were received between November and February considerable flooding occurred. Pastures are now drying off dly and further general rain is required. Surface water is t in some districts.

In the far north of **South Australia** and the **Territory** an ex- ional season is being experienced, a break having occurred in ober/November, 1952, and having been followed by further vy falls early this year. The main portion of the State has generally dry; little summer rain was received in districts th of Goyder's Line.

Most of **Victoria** also had not had a good fall since the end of uary. In both States falls in the last fortnight have been use- although we cannot expect much new feed until the Spring.

The **Western Australian** agricultural districts received a good y break and conditions are now excellent. In the Great South- and South-West good rains fell in May and the season is im- ving. Some inland pastoral areas are still very dry but, gener- , conditions are very good. In parts of the West Kimberleys ditions remain bad.

Stock Markets.

Prices for store sheep have generally followed the rising trend the wool market. The demand for cattle has been limited by uncertain feed position. Prices in the fat markets have been erally firm.

The Wool Market.

The 1952/3 season's clip was particularly well grown due to unusually favourable seasonal conditions experienced in most tricts during the growing period (with the notable exception of th of Queensland). As a result of the heavy average cut per d, the total Australian clip will probably just exceed the pre- us record clip of 1943/4, although sheep numbers would still by some millions to reach the total recorded before the 1944/5 ught.

The market opened in September, 1952, at sound levels and ce then has, with some minor checks, moved steadily upward. re has been a welcome absence of the very marked fluctuations ich characterised previous seasons recently. Average price lised for greasy wool has been:—

Season 1949/50	.. .. ..	63.35d. per lb.	
,, 1950/51	.. .. ..	144.19d. ,,	
,, 1951/52	.. .. ..	72.42d. ,,	
,, 1952/53	.. .. ..	82.72d. ,,	(11 months)

The United Kingdom has been the outstanding purchaser dur- most of the year and West European countries also took sub- ntial supplies. Japan purchased the greatest quantity she has e since the 1930's. It is understood that considerable quantities this were processed on American account for the forces in rea.

In the closing months of the season, Russian enquiry again me a factor after being practically out of the market since hectic days of early 1951. That country is at present buying l style merino normally used for the better style worsted hs.

Australian mills were not prominent early in the season but me more active as the season progressed.

American buying has been on a modest scale. It is under- d that considerable quantities of Argentine carry-over wool been absorbed there.

Estimates of consumption indicate that world production (ex- for relatively minor weights absorbed in military stockpiles) eing processed and absorbed by the retail trade.

It is understood that the U.K. Ministry of Materials does not present contemplate further stockpile purchasing next season as against this, it appears that the Argentine carry-forward been markedly reduced. The steady strength of the market is ry satisfactory feature.

During the year synthetics have received even more publicity usual, and the threat is real. Wool has been ousted from e fields, such as furnishings. However, the synthetics have us weaknesses, particularly for wearing apparel, and practic- the whole of the Australian clip is suitable for clothing. It as significant that figures for American consumption of wool still show increases, in spite of the extraordinary propaganda in favour of synthetics being conducted there.

The substantial recovery in sheep numbers in recent years has been mainly in the higher rainfall closer settled areas where pas- ture improvement work is a major factor. This explains the marked increase of comebacks and crossbreds as compared with merinos.

With our rapid rise in population, meat production is an in- creasingly important side of the industry and constitutes a useful hedge against falls in wool prices.

However, merino wool is still by far the country's most valu- able export and the basis of Australia's prosperity. It is of vital importance to maintain the standard of production as the large well-known clips are cut up into numerous small ones, and the company's wool and stock experts exert a very considerable in- fluence in this matter.

Kenaf.

At periods during and since the last war considerable diffi- culties have been experienced in maintaining the supply of jute packs essential for marketing the clip. For many years substitutes for jute as a material for packs have been sought without success, but recent tests of packs made from kenaf fibre have been quite satisfactory. This fibre comes from a type of hibiscus which has been grown in small plots in New Guinea.

This company has now joined with a number of other leading wool brokers and others interested in the wool and sugar industries to investigate the possibilities of producing the fibre on a com- mercial scale in that country.

New Share Issue.

Applications close on July 8, and any stockholders who have not yet taken advantage of their rights in accordance with the terms of the offer should do so promptly.

After allotment is completed we propose to call another General Meeting to convert the new shares into stock. The procedure we are following is made necessary by the provisions of the Companies Act.

This issue when completed will mean that the company's authorised capital has been fully availed of, and your Directors think it wise to ask you to increase the nominal capital to £6,000,000 in case it should be considered desirable to make another issue at some future date. I would emphasise that there is no present intention of making another issue in the near future.

General.

I have already referred to the changes in the Australian clip as a result of the development which is occurring in our better- rainfall areas. The discovery that very much country, hitherto practically useless, required — in addition to large quantities of superphosphate and the nitrogen-building effects of the native clovers — minute quantities of certain minerals, is a result of scientific work of the past 15 years, and much credit must go to the C.S.I.R.O.

It takes some years to bring country from its virgin state to the point where reasonable returns are received, and during that time many pounds per acre (as an approximate average, say, £15) must be spent.

In some States, Governments, private organisations and in- dividuals are doing most promising work, and, when the work is done efficiently, there is prospect of satisfactory returns, provided today's price levels continue.

As you will realise, the amount of capital and labour required means that only a limited area of country can be tackled with the resources immediately available, and this question of the wisest use of our national resources poses a problem of vital importance. We consider that expenditure on improving this type of country and providing the transport facilities necessary for its production should be given the highest priority.

At last year's meeting the hope was expressed that the efforts of the Government and Central Bank to stabilise the value of the currency would be successful. Definite progress has been made during the year, but there is still much uncertainty in the minds of business people as to the likely future movement of costs. There are indications in many industries that our costs are dangerously high relative to costs and prices overseas, and strenuous efforts by all partners in production are necessary to put our economy on a sounder basis.

As a result of a run of good seasons, payable returns, the dis- covery and application of improved pasture and farming practice, and the availability of better equipment, primary production gener- ally is showing considerable advances in efficiency. However, this country is subject to severe climatic variations, and it is now eight years since the breaking of the last general drought. We could have a recurrence at any time and, if so, the whole economy would face very great difficulties.

Staff.

As you know, our business is largely dependent on the ability and experience of our staff, and we are continuing to give much attention to their development. Your Directors record their ap- preciation of the loyal and able work of the company's staff.

*Include insurance fund and bad debts provn., which show the following unexplained additions: 1953, £284,631; 1951, £111,639; 1950, £717,820; and in 1952, an unexplained decrease of £85,379. The insurance fund carries a small part of the cover of the company's fleet.

In addition to its merchandise activities in Australia and New Zealand, and through its subsidiaries in the Pacific Islands, the company provides shipping services between Australia, New Guinea, New Hebrides, Solomon Islands and Singapore, as well as inter-island services in the Pacific.

The company owns a two-thirds interest in Burns, Philp (South Sea) Company Ltd., handling Western Pacific trade.

The merchandising division includes Penney's chain-stores, in New South Wales and Queensland, and retail houses in Albury, Goulburn, Wagga, Cowra, Narrandera, Leeton, Singleton and Nowra.

The company also has substantial funds invested in several prominent public companies, including Queensland Insurance Co. Ltd., Bankers' and Traders' Insurance Ltd., and Jantzen (Aust.) Ltd.

Conditions in the shipping division remained difficult, loss of time through delays in ports was somewhat red Earnings are inadequate to enable reserves to be set aside replacement of existing tonnage.

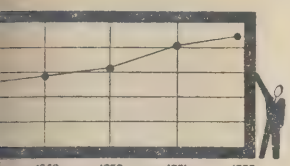
ontinues to make History

NEW BUSINESS IN 1952 OVER £108,000,000

104th Annual Chairman's Report

Highlights from Address given by the Chairman of the Principal Board (Mr. Cecil H. Hoskins) at Head Office, Sydney, on 5th June, 1953.

EW BUSINESS RECORD



1952, the Society issued ,141 new policies, assuring a al of more than £108 mil-n," said Mr. Hoskins. "This tablishes a new record for underwriting of life assur-ce by an Australian life as-rance society . . . there are rious factors in the growth d prosperity of the Society's siness, and the degree of our ccess is subject to many in-ences. Perhaps the most portant of these are the in-nsic worth of the policies offer, the loyalty of the staff, d the efficiency of our or-nisation."

AYMENTS TO POLICYHOLDERS

he Society has been provid-life assurance on the mutual nciple in this country for r 100 years and also for con-erable periods in New Zea-d and the United Kingdom. ring this time, it has ful-d all its obligations arising respect of thousands of cies owned by members m all walks of life. In 1952 he, the Society met claims maturity of over £5 million claims by death of over million. Obviously A.M.P. cies are regarded as sym-sing the best in life assur-e."

MANAGEMENT COSTS

"Our total costs of operation have naturally increased with the growth of our business. However, I am particularly pleased . . . that, although the costs of salaries and of materials rose, a slight reduction has been effected in the ratio of expenses (including taxes) to premium income in the Ordinary Department. In the Industrial Department, however, the expense rate again rose."

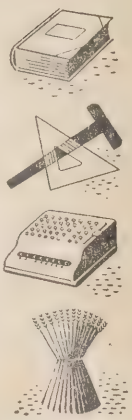
ASSETS EXCEED £255,000,000

"At the close of 1952, the Society's assets exceeded £255 million. Investments have had to be selected to absorb the amount of over £16 million by which the Society's funds increased in 1952, and provision has been made for the reinvestment of the proceeds of maturing securities. Throughout the year, demands for investible funds were considerably in excess of supply and . . . the Society was in many instances compelled to decline apparently sound investment propositions." The continuance of a wider investment policy, and the rise in interest yields, resulted in a further improvement in the effective rate of interest earned.

MEDICAL RESEARCH

Mr. Hoskins expressed the Society's pride in being associated with other leading life offices in the Life Insurance Medical Research Fund of Australia and New Zealand, in the establishment of which it had played a leading part. As already announced in the press the first task which the Fund has set itself is the investigation of diseases of the cardio-vascular system, currently the prime destroyer of life.

STAFF



"I want to thank the Staff, both indoor and outdoor for their splendid contribution to the success attained," said Mr. Hoskins. He went on to note that the Society had on its staff officers qualified in such varied subjects as "actuarial science, medicine, accountancy, agriculture, architecture and many other fields of learning." He further observed, "that the opportunities for those wishing to serve a career in industry grow as our business grows and our operations become more complex and diverse."

LAND DEVELOPMENT SCHEME

Work on the Society's Land Development Scheme in South Australia grows steadily. Recent official declarations on primary production underline the national character of the Project.

BONUS RATE MAINTAINED

"The surplus available for distribution to participating policy-holders provides for reversionary bonuses at the same rate as last year." Since bonuses in the Ordinary Department are calculated on a compound basis, "many policyholders will receive a slightly greater bonus for the year 1952 than for 1951."

CORONATION

In conclusion, referring to the coronation of Queen Elizabeth II, Mr. Hoskins said: "I am sure that the thoughts of all our staff and policyholders turn towards London at this time in loyalty and devotion to Her Majesty."

NEED FOR SAVINGS STRESSED

"There is," said Mr. Hoskins, "one aspect of our economic affairs on which I would like to raise my voice. It is a simple but fundamental matter. I refer to the role of savings in our economy." In countries like Australia and New Zealand, with undoubtedly great scope for development, there was a danger that, excluding the use of inflationary methods, savings would fall short of the amount required to finance an optimum scale of development. We should not be too complacent about obtaining sufficient finance from abroad. In illustration of this point, Mr. Hoskins quoted from the statement issued after the Commonwealth Economic Conference held in London last year.

> **"The amount of savings which will be available from external sources will, at the best, be small in relation to the size of the development programmes of the countries of the sterling Commonwealth and it is therefore essential that these countries should themselves adopt policies which increase the flow of savings."**

"Put quite simply, the problem is this," said Mr. Hoskins, "we cannot expect others to lend us their savings if we are not ourselves prepared to save . . . **Life assurance is one of the most important channels by which savings, reach the capital market.**"

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

Head Office: 87 Pitt Street, Sydney. General Manager: M. C. Buttfield.

The Great Boulder Proprietary Gold Mines Ltd.

A higher profit and an improved labour position were reported by the Chairman, Mr. A. M. Coulson, in his address to stockholders at the Annual Meeting held on June 10, 1953. His address reads:

Owing to the sudden death of the Chairman, Mr. P. F. Cody, I have been asked to preside at this the Fifty-seventh Annual General Meeting of stockholders of The Great Boulder Proprietary Gold Mines Limited. Before beginning the formal business of the meeting I should like to express the sorrow of the Directors at the great loss this company has suffered, and wish to convey our deep sympathy to his family in their bereavement. Mr. Cody was appointed Chairman of Directors shortly after the control of the company came to Australia, and his wise counsel will be greatly missed.

The Directors' Report and Accounts for the year ended December 31, 1952, have already been circulated to stockholders, and I would now like to draw your attention to some of the more important items.

Finance.

The net profit for the year ended December 31 last, as shown in the accounts submitted, was £195,145, as compared with the previous year's figure of £128,661—an increase of £66,484.

At the last Annual Meeting it was anticipated that there would be a decline in the working surplus which, it was hoped, would be offset by the amount of premium received from sales of gold in the free market.

It is gratifying to be able to report that the actual results were better than anticipated. During the year under review, despite increases in the basic wage amounting to £1/13/3 per week, and the continuing upward trend in the cost of stores, greater efficiency throughout the mine and an improved labour position made it possible to treat a larger tonnage, with the result that the cost per ton treated was actually 1/1.46d. lower and the drop in working surplus negligible.

So far the construction of the new power plant has been financed from the company's resources but, to provide the funds necessary to complete this work, an agreement has been made with Loloma (Fiji) Gold Mines N.L. to advance up to £150,000 on a debenture, the sum so advanced to be repaid by six annual instalments.

Dividends.

An interim dividend of sixpence (Australian) has been paid in respect of 1952, and a final dividend of the same amount is recommended by the Board for your approval at this meeting. If approved, the dividend warrants will be posted to stockholders next Friday.

Power Plant.

The second Crossley Premier engine and two alternator passed satisfactory tests, and are now packed ready for shi They will be sent by the first available ship. If the rem alternators are shipped as scheduled, the power plant sho finished and ready for a trial run by the end of September

Future Prospects.

We are still passing through a difficult period. Our hop an increase in the official price for gold, which has remai $35 per oz. since 1934, have not been realised. Apparently t American administration is just as firmly opposed to an i in the dollar price as were their predecessors, and we ca hope that there will be a change in their ideas at some r distant date.

In 1952, receipts from premium on gold sales amoun £69,646, and we anticipate receiving approximately the same during the current year. Because there are so many factors can affect the amount of premium, it would be unwise to f beyond that date. Generally speaking, the tendency at pre towards a smaller premium.

Costs of stores are still rising but, thanks to measures by our present Federal Government, basic wage increase been slowed down and, on the basis of the last two qu adjustments so far announced, the total increase for th should be considerably lower than was the case for last yea and the previous year, 1951. To offset this year's increas expected that there will be a considerable saving in the power when the new power plant is in operation.

The future of the mine is dependent largely on satis developments at and below the 3,100 feet level. So far, sults have been encouraging but, in common with the exp of other mines in the area, it would be logical to expect t grade of ore will be progressively lower with depth.

We are now treating approximately 35,000 tons of month, which is the maximum the plant is capable of ha With this rate of production, it is unlikely that the grade treated will show any substantial increase and consideration the facts leads to the conclusion that the profits available tribution in the next two or three years should, with a cont of present costs and gold price, remain at much the same year's level.

Before closing, I would like to express the thanks Board to the General Manager (Mr. Elvey) and the executiv and employees of the company for their efforts during th under review.

Guinea Airways Ltd.

Reg. Office: 132 North Terrace, Adelaide. **Directors:** S. Powell (Chairman), A. M. Moulden, R. B. Wiltshire, W. I. Potter, A. T. Cole. **Auditors:** Neill, Neill, Bulk & Co.

32nd Year ended February 28, 1953. Meeting May 21, 1953.

Increased passenger and freight traffic resulted in a profit £3,500 higher at £23,842.

	1953.	1952.	1951.	1950.
Revenue from cargo, passengers, dividends, etc.	£374,988	£369,150	£300,064	£203,448

Guinea Airways Ltd.

The following address was given by the Chairman, Mr. S. rell, at the Annual Meeting on May 21:

The net profit of the year after providing for depreciation, 268, and income tax, £17,966, was £23,842.
The income from investments amounted to £16,455.

Balance Sheet.

The only major change in the assets is a reduction in the n "Investments" which appear at £343,745, compared with 5,076 a year ago. This change is due to the sale of £140,000 mmonwealth Government Loans and the reinvestment of only tion of the proceeds at balance date in shares in other com- ies. Your Directors deemed it expedient to make this change view of the comparatively low return from Commonwealth ns, the interest from which is subject to tax in the hands of company. No tax is, of course, payable by the company on dends it receives on shares in other companies.
The sale of the Commonwealth Government Loan involved a of £7,902, which was charged to investment fluctuation re- ve. This account was supplemented during the year by a trans- of surplus provisions for air route and other charges previously ated and not now required, viz., £10,744, and the proceeds from sale of New Guinea leases, viz., £155, with the result that the nce of the reserve now stands at £33,384.
The present market value of the investments is less than ir book value. It is inevitable that fluctuations in market es will occur, but since the object of the investment of funds o secure a regular income, such fluctuations are not a matter serious concern.
A schedule of the investments held at February 28, 1953, is ended.
The fixed assets at £8,007 stand at considerably below their sent intrinsic value.
The item "Sundry Creditors and Provisions, £110,631" includes 352 (as against £45,770 at February 29, 1952) set aside to meet estimated accrued costs of necessary overhauls of aircraft and ines.

Dividend.

Your Directors recommend a final dividend of 6½% on both inary and preference shares, which with the interim dividend 3½% paid on November 22, 1952, represents a return of 10% the year.

Air Services.

The number of passengers carried during the year increased 81,732, while freight carried was materially higher at 2,088,640

In January last, the service to Ceduna was taken over. This ht incorporates Pt. Lincoln as a stopping place and gives that n an additional service.
Negotiations are proceeding for the establishment of a new vice to Naracoorte in the South-east and to Minnipa on Eyre ninsula.

Staff.

During the year our Manager, Mr. Archibald, with the Direc- s' concurrence, accepted an appointment to a senior position h A.N.A.
Mr. Archibald served the company with marked ability, and him is due much of the credit of reorganising the business er the Darwin service was taken over by T.A.A. and establish- our present services on a satisfactory basis. We extend to him congratulations on his appointment and our best wishes for success in his new sphere.
Mr. C. A. Window, our former accountant, was promoted to ceed Mr. Archibald. To him, to Captain Buckley, and to our ts and joint operating staff, we record our appreciation of their tinued and efficient loyal service.

An improved cash position was reported by the Chairman, Mr. V. S. Meyers, to shareholders at the Annual Meeting held on April 30. His address reads—

Again it is my pleasure to present to you what I, and your Directors, think is a very satisfactory Balance Sheet.

The year behind us was not the easy, happy-go-lucky, can't-go-wrong kind of year that we experienced during the latter part of the war, and the first post-war years.

The trading year opened with two poor months, and the summer season started late, in fact we thought it wasn't going to start at all, as we had no warm weather worth speaking about until after Christmas. But we got our stocks down by £78,500 from £269,959 to £191,459 so we felt pretty safe, and by pursuing a conservative, if unspectacular, trading policy we built up our trade wherever we could, and, although our sales are down, they are not so very far behind last year's record turnover.

Because our stocks are down and because of our conservative trading policy, careful and cautious buying, our cash position improved enormously and we turned our £13,861 bank overdraft into a handy £96,142 credit balance, an improvement of £109,583 in our cash resources. Expenses were watched very carefully and were little different from last year, in spite of rising costs. For this we have to thank our chief executive officer and depart managers, for their care and sincerity in carrying out their Our profit of £66,777 when viewed in the light of the difficulti countered during the year, e.g. slightly lowered turnover season and other physical trading factors, is, we think good compared with last year's record £73,000.

Our sundry and trade creditors at £39,217 shows an incre £1,738 on last year. This small increase is merely due to t conditions and is a matter of the amount of goods delivered The provision for taxation is almost the same as last year

Trade debtors are down by £7,089 from £21,640 to £14,5 just so happened that at balance date people owed us this less. Prepayments is up by £300. This is mostly in rates are considerably higher than last year. Fixtures and fittings an increase of £4,909 which is mainly represented by the of the fire sprinkler installation which I referred to at ou general meeting. Plant and machinery is up by £99. This is sundry items.

Our general reserve is up by £20,000 to a round £200,000 brings our reserve to £315,000 and our total shareholders' are now £793,617, an increase of £27,777 since our last meeting.

Other items in the balance sheet remain unchanged.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings. Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

THE NATIONAL BANK

OF AUSTRALASIA LIMITED

(Incorporated in Victoria)

MacRobertson (Australia) Ltd.

Reg. Office: 210 Argyle St., Fitzroy. **'Phone:** JA 3171. **Melbourne Register:** C/o Flack & Flack, 128 William St. **Sydney Register:** C/o Flack & Flack, 31 Macquarie Pl. **Directors:** N. N. Robertson (Chairman and Manag. Director), L. G. Atkinson, G. R. Brewer, E. F. Robertson, H. Taylor. **Auditors:** Sherlock & Wilson.

Year ended December 31, 1952. Meeting June 11, 1953.

Despite higher selling prices, the monetary value of sales was less than in the previous year. Profit declined by £16,000 to £179,615, and ordinary dividend was 1% lower at 7%.

"The company's share of the total value of production has been maintained, despite the loss of a large part of our export trade owing to continued increases in costs," said the Chairman, Mr. N. N. Robertson, at the Annual Meeting on June 11. His address reads:

The consolidated balance sheet sets out the corresponding figures as at December 31, 1951 and 1952, and, in comparing these, you will doubtless recall that last year we reported that stocks on hand were unusually heavy, but that opportunity had been taken to acquire certain raw materials at very favourable prices. During the past year, a large proportion of these stocks was used, and, as replacement stocks were then more freely available, we were able to reduce our total stockholding, and found it unnecessary to commit ourselves so heavily for future deliveries. A considerable reduction in stocks of finished goods has also been achieved, and these factors, together, account for the major part of the decrease of about £557,000 in current assets. The reductions in stocks and debtors are the main items contributing to a decrease of £609,000 in current liabilities, under the headings of bank overdraft, sundry creditors and liability under forward contracts. Consequently, the ratio of current assets to current liabilities has improved, and the company's financial position has become stronger.

Net additions to fixed assets during the year were about £30,000, principally for plant and equipment for confectionery manufacture and for our subsidiary company, Colorprint Pty. Ltd.

Trading Conditions.

This industry, in common with most others, suffered from steep decline in general trade experienced during the latter po of the year. Reduced public spending power affected particu the more expensive lines, and even the sales of lower priced i suffered. This is shown by the decrease in total chocolate confectionery production in Australia recorded in figures publ by the Government Statistician. This information, I am gl say, indicates that the company's share of the total value of duction has been maintained, despite the loss of a large pa our export trade, owing to continued increases in costs. This of loss, unfortunately, has been sustained by many other tralian manufacturers during the course of the last year or

Some difficulties were experienced as a result of the di import restrictions imposed early in the year, and higher p were paid for some raw materials, supplies of which were lir but, in the main, these obstacles were overcome and the com did not suffer greatly in consequence.

Having regard to the very difficult conditions affecting entire national economy during the period, the Directors regar result of the year's operations as satisfactory.

Sales.

Whilst some of our subsidiaries exceeded their sales fi for the previous year, others fell slightly short, and the net r as mentioned in the Directors' Report, was that the total mon value of sales of our subsidiary companies was slightly less

1951. After allowing for relative prices in the two periods, the rd is of the opinion that the operating companies' overall sales the year were very creditable, under the prevailing conditions.

Costs of Raw Materials.

Some of our principal, basic raw materials, such as cocoa ns, sugar, glucose and milk, continued to advance in cost dur- the past year, and there have been further increases in the e of sugar, milk and glucose since the end of 1952.

The 1952/53 crop of cocoa beans will exceed in tonnage the rious year's crop, and it was hoped that the price for this com- lity might fall below the general level of the previous year. wever, the price has advanced since December last, and there ears to be little prospect of a substantial fall before the re- nder of the crop is sold. While our purchases have been made a satisfactory figure in relation to the present price, it is to be ed that prices for the next season's crop will fall to lower levels.

Labour and Overhead Expenses.

The alarming quarterly rises in the basic wage were partly cked during the latter half of the year, and a substantial de- ase in the rate of labour turnover enabled the company to keep increase in manufacturing wages within reasonable bounds.

However, during the year, there were substantial increases in er expenses, particularly selling and distribution costs, some ng beyond our control and others being incurred through the essity of meeting competition.

Increases in labour and other costs will continue to be a major blem during 1953, and the company is endeavouring to offset m by means of a continuing campaign designed to enhance ciency wherever practicable.

Selling Prices.

As reported in the Acting Chairman's address last year, there a general increase in prices of our products in March, 1952, this was followed, in October, by a further small rise in the es of sugar confectionery. In February, 1953, there were minor reases in the prices of various chocolate tablets and sugar con- tions, but no alterations were made in certain others, although se would have been justified. These adjustments were not en- ly adequate to recoup the company for the increased costs ich had occurred during 1952, and, if labour and expense rates the cost of raw materials continue to rise, further increases y be necessary, unless relief can be obtained in some other way.

It is not surprising that the buying public sometimes com- ins that the prices of chocolate and confectionery are too high, you will see, from the charts appended to this address, that retail selling prices of some of our typical, more important ducts average 258% of the 1939 prices. However, today's basic ge is 290% of that prevailing in 1939. In view of this and also the large increases in costs of raw materials (some 800% in ase of cocoa beans) it is evident that, although prices are ch higher than we wish, strenuous endeavours have been made keep them as low as practicable.

Subsidiary Companies.

The operations of our subsidiary companies were satisfactory, thanks to improvements which have occurred in interstate nsport conditions, loss of turnover due to stock shortages was atly reduced.

Trading Prospects.

During this year, i.e., 1953, sales to date have shown consider- e improvement, but, as previously mentioned in this address, main problem will be to offset the continuing rise in costs ich we expect will again become evident later in the year.

It is likely that future trading conditions will continue to be ficult, but the Board is hopeful that buoyant sales can be main- ned throughout the year, so enabling the company and its sub- iaries to continue to show reasonable profits.

Taxation.

We have never complained merely because we have found es uncomfortable, but when they have become obviously unjust, a threat to industry and the national economy, I feel the tter can no longer be ignored. The following remarks present hing new, and certainly are not exhaustive, but are put before kholders as a warning of the prospect facing them and other estors if the Federal Government cannot be brought to a proper reciation of the seriousness of the present situation.

Income tax alone consumes approximately one half of this pany's net profits. When sales tax, customs and primage duties, are taken into account, the total of taxes contributed to the asury as a direct result of the company's operations, now sub- ntially exceeds one million pounds per annum.

A brief examination of sales tax, in particular, is illuminating. rate applicable to our products is now 20%, as against 5% in 9. As this fourfold increased rate is collected on today's greatly reased prices, the amount of sales tax being paid by the public ay, on a given volume of our products, is more than nine times high as in 1939! This is shown in graphical form by one of appended charts.

The present company tax rate of nine shillings in the pound es little enough for reasonable dividends and reserves, but the situation is worse than that. Depreciation allowances under Income Tax Act are utterly unrealistic. Only in certain special umstances is any deduction allowed for depreciation of build- s, and, in respect of other assets, the allowances are based on inal cost, being, therefore, quite inadequate to meet cost of acement at today's prices. Industry and, therefore, the com- nity, cannot, in the long term, endure such a policy, and it is erative that relief be given, to permit proper provision for reciation, an adequate ploughing back of profits, and a reason- e return to shareholders. The alternative would involve, ulti- mately, further increases in the price of manufactured products and a fall in the standard of living.

I am aware that the Federal Government has some formidable problems on its hands. But, if it does not awaken within the next few months to the seriousness of the effect of its taxation policies upon industry, its problems will undoubtedly grow considerably greater. I think it behoves us all to try to arouse the Government to the danger confronting us.

New Products.

You will, perhaps, have read my letter to stockholders, which appears on page 15 of the Report, drawing attention to the recent release of a new milk chocolate.

Although, hitherto, our trade in plain milk chocolate has been substantial, the Board, for some time, has believed that it could be expanded, and, therefore, after much research, we have produced this new and outstanding product, which we believe to be superior to anything offered by our competitors. The initial release has been quite overwhelmingly successful, and we are hopeful of substantially improving our trade as a result. We commend the product to our stockholders and ask them to make it known to their friends.

In a letter to stockholders included in the 1951 Annual Report, Mr. Eric F. Robertson referred to negotiations with two overseas companies for the use of special processes. It was decided, after considerable investigation, that one of the processes did not warrant adoption, but negotiations in respect of the other have continued. We have reached agreement regarding the general terms and now await completion of the formal agreement.

Under the agreement proposed, we shall be producing a small range of products under licence from the famous British firm of John Mackintosh & Sons Limited, whose reputation throughout the confectionery world stands very high. Prior to the recent imposition of import restrictions, some of these lines were being imported and readily sold in Australia. It is proposed that Mackintosh's should supply us with plant, formulae and technical co-operation, and that we should manufacture and market some of their principal lines in Australia. The Board is very gratified that this arrangement has been concluded, and believes that it will prove of considerable benefit to the company. Some time will elapse before the necessary plant can be supplied and installed, but we are proceeding with these arrangements as speedily as possible.

Dividend Policy.

The recommendation of the Board, that the final ordinary dividend of 4% be paid from tax paid reserves, is not meant to imply that ordinary dividends should continue to be paid wholly from tax paid reserves until these are exhausted. On this occasion, the Board decided to recommend payment of the dividend in this manner because of the possibility that income tax rates may be lower in future, and it was thought desirable to give stockholders the benefit of the tax-paid dividends whilst tax rates are high.

Future recommendations as to whether ordinary dividends shall be paid partly or wholly from tax paid reserves will depend upon available profits and other conditions prevailing at the time.

Contingent Asset.

In the financial notes appended to the accounts, reference is made to an estate duty refund of £58,111. This refund was the result of an objection by the estate of the late Sir Macpherson Robertson to the Federal Taxation Commissioner's assessment of estate duty. The amount of £58,111, which was received by the estate subsequent to December 31, 1952, has now been paid to the company, and the general reserve account accordingly will be increased by this amount.

Conclusion.

Before closing, I should like to express the thanks and appreciation of the Board to all those executives and employees of the company and its subsidiaries who have given of their best under the difficult conditions of the past year, and I feel sure that stockholders will wish to join with us in our appreciation.

In addressing shareholders at the Twenty-third Annual neral Meeting on June 22, the Chairman, Mr. Staniforth cketson, said:

CORONATION OF QUEEN ELIZABETH II.

Before proceeding with the business of the meeting, the airman said:—

Ladies and Gentlemen:

You will, I know, join with the directors in placing on record r deep sense of loyalty to our gracious and beloved Queen izabeth II on the occasion of her Coronation on Tuesday, ne 2, 1953.

This great event was characterised by one of the most oving ceremonials ever witnessed in the proud history of the itish race. Its significance, indeed, extended far beyond the nglish-speaking peoples and called forth almost universal monstrations of admiration and affection without parallel recent times.

These demonstrations represented, not only the expression of e deep sense of gratitude which many nations entertain wards Britain for her tremendous sacrifices in the cause of orld freedom, but also recognition of the spiritual leadership ven by the British Royal Family. Indeed, I think you will agree that in our present Queen we have the embodiment the highest ideals of virtue and integrity as well as public rvice. During her reign, Her Majesty has shown herself, by rsonal example, to be capable of becoming the symbol of that is best in the Christian faith and of preserving and tending the best traditions of national and individual conduct.

May her reign usher in a new era of peace and happiness for world sorely-beset by doubts and troubles, and may she and r Consort long enjoy the esteem and affection of the English-eaking peoples and of nations of the world as a whole.

ACCOUNTS OF THE COMPANY.

Turning to the affairs of the company, you will have seen m the directors' report and statements of account, which ve been in your hands for some time, that, due to the nge in economic conditions, the rate of growth in stock-ders' funds in the year ended March 31 last was rather less n in the preceding year. However, this need cause no con-n as any organisation of a permanent character must essarily reflect the periodic changes in general conditions ich are inevitable.

National Reliance, the second oldest company in the Capel Court Group, was formed just before the economic depression of the early nineteen-thirties. Since then alternating periods of prosperity and recession, including nearly six years of war and the post-war period of readjustment, have been experienced. The company was registered on December 24, 1929, and commenced business with an initial paid-up capital of £50,082 in shares of 10/ each. By 1938, the figure had been increased to £250,000 by successive new issues at par to shareholders, but no further expansion of capital was possible until after the war ended.

Subsequent to the war, new issues to shareholders were resumed and, as a result of the recent issue of 140,000 shares of 10/ each at par, the paid-up capital, which stood at £630,000 at the last balance date on March 31, 1953, has been increased to £700,000.

GROWTH IN CAPITAL.

Stockholders who have joined the company in recent years may be interested in the following summary of the new issues made since formation:—

NEW SHARE ISSUES

		Price of Issue	Proportion	No. of Shares	Amount	Total Paid-up Capital
Paid-up Capital at 31st March, 1931						£50,082
New Issue May, 1935		Par	1 for 4	25,041	£12,521	62,603
,, ,, Feb., 1936		Par	3 for 5	75,123	37,561	100,164
,, ,, June, 1936		Par	1 for 1	199,671	99,836	200,000
,, ,, Mar., 1937		Par	1 for 4	100,000	50,000	250,000
,, ,, Mar., 1947		Par	1 for 5	100,000	50,000	300,000
,, ,, Feb., 1948		Par	1 for 6	100,000	50,000	350,000
,, ,, Feb., 1949		Par	1 for 5	140,000	70,000	420,000
,, ,, Mar., 1950		Par	1 for 4	210,000	105,000	525,000
,, ,, Mar., 1951		Par	1 for 5	210,000	105,000	630,000
,, ,, May, 1953		Par	1 for 9	140,000	70,000	700,000

From the foregoing table, it will be seen that an investor who held 400 shares of 10/ each fully paid in 1934, retained his original holding and took up his full proportion of new shares in the ten new issues since made, would now hold 5,600 stock units of 10/ each, which would have cost him (at par) £2,800. As at our last balance date on March 31, 1953, the net assets backing for each 10/ stock unit, based on the market value of the investment portfolio was 13/, so that the net assets value of the total holding of 5,600 stock units (bought at cost, £2,800) would be approximately £3,640.

The assets value, however, is materially greater than the market quotation for the stock units, which, in common with

(Continued on next page)

NATIONAL RELIANCE INVESTMENT CO. LTD. (Contd.)—

all other Australian equities, is much below the levels ruling in the peak years of 1950-51 and 1951-52. On the basis of the dividend rate paid in each of the last three years, the stockholder would be receiving a return of 5¾ per cent on his outlay.

BUILDING UP INCOME-EARNING FUNDS.

Owing to the steady accumulation of reserves, total stockholders' funds are appreciably greater than the paid-up capital, the income-earning capacity of which has thereby been increased. Owing to the smaller revenue received in 1952-53, when dividends paid by many companies whose shares are included in our portfolio were reduced or omitted, the rate of increase in stockholders' funds in that year was less than in the preceding period. Nevertheless, whilst the 5¾ per cent distribution was maintained in respect of the 1952-53 year, it was possible to add £10,593 to reserves and undivided profits. These now total £133,407 equal to over 21 per cent of the paid-up capital of £630,000 at the balance date, or 19 per cent of the present paid-up capital of £700,000.

Reserves and undivided profits are made up as follows: General reserve (increased by £8,000), £71,000; revenue appropriation account carry forward (up £2,569) £10,732; and investment fluctuation reserve (representing net capital gains on changes of investment over the years) £51,675.

USE OF OUTSIDE MONEYS.

Under the conditions of higher interest rates on bank accommodation which have developed during the past two years, plus, of course, the statutory limitation placed on secured borrowings by investment companies, it has not been possible to use loan funds to the same extent as formerly to augment the earning capacity of stockholders' funds. At the balance date, current liabilities and provisions totalled £170,687, as against £207,417 at March 31, 1952. Of the total, £73,122 (up £22,769) represented bank overdrafts against security; £45,611 (down £2,848), loans against security; and £1,163 (down £50,448), deposits.

The balance of the current liabilities and provisions comprised: provision for taxation, £12,188 (down £7,477); provision for dividend as recommended, £36,225 (unchanged); and sundry creditors and securities bought but not delivered at the balance date, £2,378 (up £1,274).

INVESTMENT PORTFOLIO.

The main asset of all such companies, is, of course, the investment portfolio. In the case of National Reliance, this comprised 368 individual stocks at March 31 last, as compared with 366 at the corresponding date in 1952. As is normal in periods of inflation, the bulk of these stocks (91 per cent of their value in 1953) represented ordinary shares giving a cross-section of industry, trade and finance (almost entirely in Australia). The balance was made up of 8.6 per cent in preference shares and 0.4 per cent in bonds and debentures.

All investments are carried in the books at cost, which in 1953 was shown as being £926,321, an increase of £18,527 on the cost valuation at March 31, 1952. It is the invariable practice to include in the balance sheet for the information of stockholders the market value at the balance date of the securities held. At March 31 last, the total market valuation was shown to be £979,767, representing an appreciation of £53,446, or 5.8 per cent on cost.

The market value of investments at any particular date is merely of academic interest in the case of a continuing entity such as an investment company. This is because such companies are concerned mainly with the prospects of earning reasonable revenue and paying reasonable dividends over a period, whilst at the same time ensuring maximum practicable safety of capital and aiming to derive benefits from the growth in income-earning funds and from the long-term appreciation of the stocks they hold. As with all other financial operations, the assets values and income-earning power of investment companies inevitably fluctuate in accordance with ever-changing economic, seasonal and political conditions.

The fluctuations which have taken place in the market value of securities held by the company over the last nine years are shown in the following table, comparing the balance sheet valuation of investments held with the market value at M 31 in each year:—

Year to 31st March	Cost	Market Value	Appreciati Amount	Per
1945	£365,473	£369,464	£3,991	
1946	367,248	421,012	53,764	1
1947	383,315	495,583	112,268	2
1948	514,284	656,803	142,519	2
1949	608,486	726,293	117,807	1
1950	697,682	923,624	225,942	3
1951	722,247	1,145,682	423,435	5
1952	907,794	1,006,567	98,773	1
1953	926,321	979,767	53,446	

From the foregoing figures, it will be seen that, in e year, the market value at March 31 was in excess of the However, had the valuation been at other periods of each the results might well have been different owing to the flu ations which take place in security prices from time to t

NEW ISSUE PARTICIPATIONS.

As part of the comprehensive information provided stockholders, the Capel Court Group of investment compa publish with each year's balance sheet a detailed list of inv ments held at the balance date. This enables stockholder appreciate the manner in which their funds have been inve In addition, full lists of purchases and sales made during year are appended to the balance sheet, together with sched setting out details of allotments of shares in new issues reorganisations of capital in companies whose securities included in the portfolio.

In the directors' report and statements of account, you observe that, through rights attaching to existing hold and purchases in the market, the company during the acquired new issue holdings totalling 67,347 units in 32 s rate companies. These figures include 10,944 6 per cent r tered unsecured notes of £1 each in Repco Limited and equivalent number of share options in that company, as as 1656 6 per cent registered unsecured notes of 10/ each 3,312 share options in Moulded Products (Australasia) I ted. In addition to these new issues, the company receive the form of bonus issues, 4,487 shares in three other compa

OTHER ASSETS.

As indicated, practically all the funds of the company invested in securities at the balance date, the only other a being: Securities sold but not delivered at the balance £1,893; sundry debtors, £4,238; and cash at bankers, £1 The last-named item had been reduced from £46,410 a March 31, 1952, the bulk of the money having since bee vested in securities.

REVENUE AND EXPENDITURE.

As a result of the unfavourable change in economic c tions during the year, resulting in the omission or redu of dividends by many companies, total income (after deduc interest paid on loan funds) fell from £67,077 in 195 £53,544 in 1953. Mainly due to a reduction of £2,850 in vision for taxation (to £650), total expenses were reduce £3,273 to £6,750.

Administrative expenses, including rent, salaries, and and general expenses at £5,060 (as against £5,460 in 1952) be regarded as moderate for a company which employed funds of £882,419 during the year. This is made possibl the existence of the joint secretariat which manages the a of the eight companies in the Capel Court Group and appor the expenses over all the companies on an equitable basi

After deducting all expenses, the net revenue in 1953 £46,794, a reduction of £10,260 by comparison with the pre year. This represented earnings of 7.4 per cent on pa capital, as compared with 9.1 per cent in 1952. Neverth earnings were sufficient to enable the directors to add £1 to reserves and undivided profits, after making provisio the maintenance of the 5¾ per cent dividend, requiring £3

DIRECTORS.

It is the sad duty of the directors to place on recor loss of a most valued colleague and beloved friend i person of Sir George Dalziel Kelly, who had been a di of the company for 14 years. Sir Dalziel was a direct

ch of the other investment companies in the Capel Court roup, having joined the boards of the four oldest companies September, 1938, and subsequently becoming a director of each the newer companies as formed. During his association with e group, he made splendid contributions to the development the various companies and to their prestige, just as he did the many other spheres in which he was known as a man of tstanding ability and integrity.

To fill the vacancy caused by the demise of Sir Dalziel elly, Colonel F. H. Wright, O.B.E., V.D., accepted an invitaon to join the board of this and the other companies. Mr. E. ston Lloyd was appointed to act as alternate director for olonel Spowers during the latter's absence overseas.

UNCTIONS, ACTIVITIES AND POLICY OF "MANAGED" INVESTMENT COMPANIES.

Origin of Investment Companies.

Since J. B. Were & Son sponsored the formation, in 1928, the first Australian investment company of the management pe, the movement has undergone considerable growth in this untry. Based on the experience of the United Kingdom and e United States of America, the scope for further development is almost unlimited. The history of the movement here as followed very much the same course as in those countries, ough it was initiated in Australia at a much later date and s growth here has been somewhat slower.

Investment trusts (or investment companies, as they are own in Victoria), originated in Scotland in the eighteenxties. being developed in their early stages largely to exploit e great opportunities offering in America following the Civil ar. Later, the movement extended to England, where, in the te 'eighties, some 12 investment trusts were operating. From at time, expansion, both in Scotland and in England, was pid and continuous until the system came to be recognised forming an integral part of the investment market in the nited Kingdom and as a means of marshalling reservoirs of vings which contributed materially to economic development that country.

It was not till after World War I that the movement obined a hold in the United States of America, but the growth ere has since been phenomenal. The securities of "open-end usts," which represent an adaptation of the system to the peculiar conditions of America, are now widely recognised as appropriate avenues of investment, not only for large and small private investors, but also for considerable amounts of collegiate, endowment and other trust funds.

The Movement in Australia.

The first investment company to be established here was Were's Investment Trust Limited, the name of which was subsequently changed to Australian Foundation Investment Company Limited. That company was registered in Melbourne on July 13, 1928, with an authorised capital of £1,000,000 in ordinary shares of 5/ each. The initial public issue of capital, namely 500,000 5/ shares, was quickly subscribed by 850 applicants, and further issues in subsequent years brought the paid-up capital to £375,000 by 1936. Though progress was interrupted by World War II, the company today has a paid-up capital of £1,200,000, and, at the last balance date (June 30, 1952), total shareholders' funds amounted to £1,439,038. The company at that date held investments which cost £1,711,678 and had a market valuation of £1,912,640.

In 1929, J. B. Were & Son sponsored a second company, National Reliance Investment Company Limited, which was followed by Capel Court Investment Company (Australia) Limited in 1936 and Jason Investment Company (Australia) Limited in 1937. These four companies, established prior to World War II, formed the nucleus of what is now known as the Capel Court Group of Investment Companies, the number of constituents of which was increased to eight by the flotation of four new companies in 1950. In the meantime, other interests in Australia had established investment companies of the management type, whilst some concerns originally established with a different objective had also developed into investment companies.

The expansion of the Capel Court Group over the last quarter of a century provides striking evidence of the growth in popularity of this type of investment. From the initial capital of £125,000 of the first company, the group has grown steadily until, at their last balance dates, the eight companies had total issued and paid-up capital aggregating £3,090,000 (including the recent new issue by National Reliance), total stockholders' funds of £3,571,616 and total investments with a cost value of £4,185,305. The table published hereunder shows their present position.

Date Registered	Company	Paid Capital	Reserves & Undivided Profits	Stockholders' Funds	Investments Cost	Investments Market Value	Nominal Value of Stock Units	Net Tangible Assets per Stock Unit†	No. of Stockholders	Average Holding Stock Units	Average Holding Amount
13/ 7/28	Australian Foundation ..	£1,200,000	£239,038	£1,439,038	£1,711,678	£1,912,640	5/–	6/10	3,237	1,483	£371

Attractions of Investment Companies.

The functions, activities and policies of investment comnies of the management type will be known to most of you, t for stockholders who have entered this field only in recent nes, the major features may be summarised as follows:—

1. **Co-operative Investment:** Investment companies operate on the co-operative principle, pooling the savings of a large number of people and investing them in a wide variety of stocks under expert and experienced management.
2. **Spread and Diversification:** Holdings in such companies enable investors to obtain spread and diversification of investment which is denied to people of limited resources. For example, stockholders in National Reliance Investment Company Limited have interests in no fewer than 368 individual stocks, representing a cross-section of trade, industry and finance (almost wholly in Australia). Some 91 per cent of these holdings comprise ordinary shares, thus affording protection against the depreciation in the purchasing power of the currency resulting from continuing inflation.
3. **Long-Term Benefits:** Investment company shares are essentially a long-term investment designed, not to reap quick market profits, but to provide reasonable income whilst at the same time capitalising the continuing growth and development of the economy. Australia's population has increased from seven million to nearly nine million since 1939, and a further two million may

(Continued on next page)

NATIONAL RELIANCE INVESTMENT CO. LTD. (Contd.)—

be added during the next four to five years. That would provide opportunities for the further expansion of the operations and capital of a large number of companies in which National Reliance holds shares.

4. **Close Contact with Markets:** The Group is under experienced management, which is in hour-to-hour contact with Stock Exchange markets and has special facilities for keeping abreast of economic and market developments. This enables desirable changes of investment to be made from time to time to protect stockholders against altered conditions or variations in the prospects of specific industries or individual companies whose shares are included in the portfolio.

5. **Growth in Capital and Income:** Normally, during the period of growth, dividends paid by investment companies are moderate, one of the major aims being to accumulate reserves and thus build up income-earning funds to support the permanent capital of each company; borrowed funds in moderate amounts are also employed for this purpose.

6. **Strong Security:** Security for capital and income in these companies is greater than that indicated by the published accounts which show—
   (a) the cost of investments (and, as a footnote, their market value at the balance date); and
   (b) the actual revenue derived from dividends and interest on investments.

   Consequently, the investment in company shares is supported by the assets backing behind each individual investment, and by earnings of companies, whose shares are included in the portfolio, over and above the actual dividends paid. For the purpose of illustration, let us assume that the 17,000 5/ ordinary shares in A. G. Healing Limited, held by National Reliance, were carried in the books at an average price of, say, 9/2 per share or a total of £7,769. Analysed accounts of A. G. Healing Limited, however, show that the net tangible assets backing for each 5/ ordinary share is 21/3, which would indicate a total assets value of £18,063 for the 17,000 shares against the cost valuation of £7,769 in the books of National Reliance.

   For the year ended June 30, 1952, A. G. Healing Limited disclosed net earnings at the rate of 48.3 per cent on paid-up capital, equal to an annual amount of £2,053 in respect of 17,000 shares. The dividend paid for the year ending June 30, 1952, however, was at the rate of 15 per cent per annum, equal to £638 on 17,000 shares; so that the National Reliance had an equity of 33.3 per cent (or a total of £1,415) in respect of the 17,000 shares held, over and above the dividend of 15 per cent received from A. G. Healing Limited.

7. **Stockholders Fully Informed:** Investment companies give more comprehensive information as to their operations and assets than any other type of company. Ordinary trading or manufacturing companies usually list their assets only under general headings, such as "Land and Buildings," "Plant and Machinery," "Shares in Other Companies," "Stocks," "Debtors," etc., and it is impossible for anyone other than high executives of a particular company to form even an approximate estimate as to values. Every company in the Capel Court Group, however, publishes as addenda to its balance sheet:—
   (a) A detailed list of the investments held at the balance date, specifying the class of security and the quantity held;
   (b) The total cost of the investments held and the market value at the balance date;
   (c) Detailed lists of purchases and sales made during the year;
   (d) New issue shares obtained by allotment or purchase in the market, or through capital reorganisations;
   (e) A schedule classifying investments according to industries;
   (f) Details of sub-underwriting transactions and t results thereof; and
   (g) The total amount of brokerage paid in each ye

   Moreover, in the chairman's address at each annu meeting of stockholders, a detailed survey of the counts and operations of each company, and of eco mic, seasonal, political and other conditions affecti the investment market, is given.

8. **Statutory Safeguards:** The interests of stockholders investment companies registered in Victoria (but in other States) are strongly protected by the sa guards provided under the Investment Compan Section of the Victorian Companies Act 1938, and the comprehensive listing requirements of The St Exchange of Melbourne. By virtue of the statut provisions, which will be dealt with in more detail a later stage in this address, investment compan proclaimed as such under the Victorian Companies A are given a legal status possessed by few other types companies except trustee and insurance companies certain public utility concerns.

9. **Marketability of Shares:** The shares of the eight co panies in the Capel Court Group are listed for quo tion on The Stock Exchange of Melbourne. It is t possible to obtain a market value for them at any ti and, subject to existing market conditions, purcha and sales can be made with reasonable facility.

10. **Management Expenses Moderate:** Through the ex ence of a central secretariat managing the affairs the eight companies in the Capel Court Group, ann expenses are moderate. Total investments held by eight companies at their last balance dates were sho at cost, £4,185,305. Management expenses of those ei companies in the financial year concerned total £25,929, inclusive of audit fees, directors' fees, re salaries and office and general expenses, but exclus of brokerage paid on investment changes and the sm amount of interest payable on borrowed money. To revenue of the eight companies for the year (af deducting interest paid) amounted to £277,584.

Disclosure of Information.

Ever since the first of the Capel Court Group of Investm Companies was established, it has been the policy of the direct to keep shareholders fully informed as to the operations their companies. From its inception in 1928, Australian Fo dation Investment Company Limited, the pioneer of the gro published annually with its accounts a full list of all inv ments held, although, in the earlier years, there was no sta tory or Stock Exchange obligation to do so. It also inclu as a footnote to the balance sheet, a statement showing approximate market value of the investments at the bala date.

The same policy was pursued by National Reliance Inv ment Company Limited and Capel Court Investment Comp (Australia) Limited after formation in 1929 and 1936 resp tively. The Investment Company sections of the Victor Companies Act did not become operative until 1938. Since th the information made available to shareholders has inclu not only the list of investments held, but also schedules sh ing purchases and sales during the year, together with det of shares acquired through reorganisation of capital, bo issues, etc.

All the Capel Court Group of companies then in existe or subsequently formed have meticulously observed all sta tory and Stock Exchange requirements in regard to the closure of information, the limitations imposed on their vestment policy and the contents and form of the accou presented. In some respects they have gone even further, as il trated by the practice of publishing with the accounts det of underwriting transactions and a schedule giving a dis tion of investments under various industrial categories. main provisions of the Victorian Companies Act and of Stock Exchange of Melbourne listing requirements are set in the schedule opposite.

Victorian Companies Act	Stock Exchange Listing Requirements.
orrowing Powers: No Investment Company shall borrow a greater amount than) per cent. of its paid-up share capital and of that amount no ore than 25 per cent. of the paid-up share capital shall be bor-owed otherwise than by an issue of debentures. Any debenture so issued—(a) Shall not be redeemable (except the option of the borrower exercised not earlier than 2½ years fter date of issue) within five years of the date of issue; and) shall not be issued to a bank as security for an overdraft.	An Investment Company shall not incur indebtedness greater than its paid-up share capital and free reserves.
imitations on Investments: (a) A greater amount than 10 per cent. of the paid-up share apital of an Investment Company cannot be invested in any one ompany. (b) No Investment Company may hold more than 5 per cent. f the subscribed ordinary capital of any one company. (d) No Investment Company shall purchase or hold shares in debentures of—(a) Any other Investment Company; or (b) any ıvestment Company registered in any other State, or Common-ealth Territory or New Zealand which has been proclaimed as n Investment Company under the Victorian Act. (e) If the above proportions are exceeded as a result of an nderwriting transaction the Investment Company is allowed 12 ıonths in which to reduce its holding to statutory limits. (f) Trading in raw materials or manufactured goods is for-ıdden.	(a) An Investment Company shall not invest more than 10 per cent. of its paid-up share capital in any one company. (b) An Investment Company shall not hold more than 5 per cent. of the subscribed ordinary share capital of any one company. (c) An Investment Company shall not invest more than 10 per cent. of its paid-up share capital in unlisted securities, excluding new issues for which official quotation is to be sought. (d) An Investment Company shall not hold shares in any Australian Investment Trust Company. Nil Nil
nderwriting Activities: No Investment Company shall underwrite or sub-underwrite— a) Any issue of Trustee Securities to an amount greater than 40 er cent. of its own paid-up share capital; or (b) to an amount xceeding 20 per cent. of its own share capital in any issue of ny other kind of securities.	An Investment Company shall not underwrite or sub-underwrite an issue of Trustee Securities to an amount in excess of 40 per cent. of its own capital, or any other issue to an amount in excess of 20 per cent. of its own capital.
rticles of Association: Both the Articles of Association and every prospectus must tate— (a) The type of security in which it is among the objects of he company to invest; (b) whether it is among the objects to invest within Aus-ralia or outside Australia or both.	Nil
ists of Investments, etc.: (a) A complete list of all purchases and sales made during he period covered by the accounts must be published with the Balance Sheet. (b) A complete list of all investments held, stating names and uantities of each, must be published with the Balance Sheet.	(a) Nil. (b) A complete list of all the holdings of an Investment Company showing names and quantities, must be published with the Balance Sheet, provided that an amount equal to 10 per cent. of either the paid-up share capital of the Investment Company, or the cost of the investments (whichever is lower) may be combined under the heading "Miscellaneous Securities." An Auditor's Certificate must include a statement that all these "Miscellaneous Securities" have been held for less than one year.
Brokerage Payments: A statement must be appended to the list of purchases and ales showing the total amount of brokerage paid by the company uring the period and the proportion thereof paid to any share-roking firm, a principal, employee or nominee of which is a direc-or, manager or officer of the company.	Nil
nvestment Fluctuation Reserve, All profits and losses from the purchase and sale of securities ıust be respectively credited or debited to an Investment Fluctua-ion Reserve, which shall not be available for the payment of ividends.	All realised profits or losses on security transactions shall be excluded from Profit and Loss Account and credited or debited to an Investment Fluctuation Reserve. Should a debit balance occur therein, it shall be shown in the Balance Sheet as a deduction from Profit and Loss surplus or as an addition to Profit and Loss deficiency. This reserve shall not be available for current dividends.
ncome from Underwriting: The profit and loss account of every Investment Company shall how separately income from underwriting (including sub-under-riting).	Income from underwriting (including sub-underwriting) must be shown separately in the accounts of the company.
eneral Provisions: Nil ,, ,, ,, Nil ,, ,,	(a) Not more than one member (or employee or nominee) of any sharebroking firm shall be a member of the Board of Directors at any one time. (b) An Investment Company shall not be domiciled in a share-broker's office. (c) There shall be no special association with any broker's office through the secretary or staff of an Investment Company or in any other way. (d) All dealings in securities (other than underwriting) shall be effected through members of recognised Stock Exchanges. (e) An Investment Company must not act as stock and share brokers. (f) An Investment Company must deal direct with any member of a recognised Stock Exchange and not necessarily restrict its business to any one broker or firm of brokers. (g) An Investment Company must not advertise except as to the publication of (a) its prospectus on formation; (b) its periodical statement of accounts and matters relative thereto.

(Continued on next page.)

NATIONAL RELIANCE INVESTMENT CO. LTD. (Contd.)—

No Inter-Company Dealings.

Both the Victorian Companies Act and the Stock Exchange Regulations preclude an investment company from (a) holding more than 5 per cent of the subscribed ordinary capital of any other company; (b) investing more than 10 per cent of its own paid-up capital in the shares of any other company; or (c) holding shares in any other Australian investment company.

The last-named provision definitely refutes loose statements which have been made from time to time about inter-locking shareholdings between the companies in the Capel Court Group. Such a practice is precluded, not only by Stock Exchange listing requirements, but also by the Victorian Companies Act. Moreover, there are no inter-company transactions of any kind in securities as between the eight companies in the Capel Court Group, each of which operates as an entirely separate entity.

Sub-Underwriting Transactions.

The Capel Court Group companies have from time to time had the opportunity of participating, through J. B. Were & Son, in sub-underwriting transactions. Under favourable conditions, such transactions offer prospects of reaping reasonable profits, but, by their nature, they involve risks—quite substantial risks during periods of changing economic conditions. Recognising this, the directors of the Capel Court Group have adopted a prudent and conservative sub-underwriting policy. This is demonstrated by the following tables which show the sub-underwriting transactions entered into by National Reliance during the last four years:—

DETAILS OF SUB-UNDERWRITING TRANSACTIONS AND COMMISSIONS RECEIVED 1/4/49 TO 31/3/53.

Company and Details of Issue.	Amount or No. Sub-underwritten.	Amount of Commission.	Result of Issue.*

* The entry "No allotment" signifies that the issue was fu subscribed.

Summarised, these transactions over the last four ye have involved 59,050 shares and £27,000 of debentures a unsecured notes, representing a total of £96,206. Of this to your company has been required to take up only 4,003 sha and £1,400 of debentures and unsecured notes, represent in all a monetary value of £5,580. Underwriting commissi received by the company in respect of these transactions ha amounted to £971/12/4 over the four-year period.

It is a normal expectation that anyone belonging to underwriting group should be prepared to share the risk w the primary underwriter in every issue which the group handl It should, however, be made clear that your directors ha never been asked by J. B. Were & Son to operate on that pr ciple. In common with other companies in the Capel Co Group, your company has been offered sub-underwriting J. B. Were & Son only in issues the success of which appea reasonably assured.

Accumulation of Savings.

Holdings of stock or shares in investment companies rep sent an ideal investment for people of moderate means and a for provident, superannuation and other similar funds. Th constitute a trouble-free investment under expert and expe enced management and ensure that holders will reap progr sively the benefits of the expansion of the economy of country or countries in which the funds of the company invested.

Such companies are not designed to produce spectacu results, the major aim being to pay reasonable dividends a to build up income-earning funds through the steady accu lation of reserves and undivided profits. The shares of s investment companies, therefore, provide a satisfactory medi for the progressive investment of the savings of folk who concerned with safety of their capital and the building up their resources through the growth and development of country in which they live.

SURVEY OF ECONOMIC CONDITIONS.

Tax Reductions Promised.

As a result of the Senate elections, held on May 9 l political conditions are likely to be more stable during the n nine or ten months than appeared probable before the electi were held. Though the Liberal-Country Party Government able to retain control of the Senate with a majority of t the Labor Party obtained a substantial majority of the vo cast. Consequently, the Government's policy between now the general elections due about April or May next will influenced by its very natural desire to recover the ground during the last couple of years.

Already, the Commonwealth Treasurer, Sir Arthur Fad has given what he termed "a firm and unqualified undertaki that the Government will announce tax reductions in the Bud for 1953-54 to be presented to Parliament about the end August next. The Government rightly refused to commit it during the Senate election campaign, or, indeed, until the res of the full financial year had become available, as to detail proposed taxation cuts. The general and logical expecta is that the relief to be given will cover a wide field of di and indirect taxation, with particular attention to indivi rates in the lower and middle income brackets. At the s time, it should be realised that heavy commitments for def and the difficulty of making any worthwhile reduction in mal public service expenditures may make it difficult for Government to provide really substantial tax reductions.

evenue Exceeds Estimates.

Treasury returns for the first 11 months of 1952-53 show at Commonwealth revenue receipts are running well ahead those for the corresponding period of 1951-52 and will easily ceed Budget estimates for the current year. These Budget timates forecast total revenue of £1,009 million for the full ar, but, up till the end of May, receipts had reached £904 llion, so that, with the June revenue, expected to amount to me £125 million, still to come, the budgetary position will much better than appeared likely. It is most gratifying to ow that Commonwealth expenditure is well below the esti-ates, and it now appears that, in place of the expected sur-us of £500,000 foreseen in the Budget, the excess of revenue er expenditure may amount to something like £20 million at e end of this month.

The position has been greatly helped by the considerable provement in wool prices for the larger clip, and the grati-ing results obtained in other primary industries. The gene-lly better trading conditions experienced in the second half the financial year, as well as the increased customs revenue sulting from some relaxation of import restrictions, should so make the task of the Government easier. In the light of ese facts, and the very favourable overseas trade balance for e current financial year, it seems probable that tax conces-ns, though they may be less than optimistic public hopes, ll yet be far more than a token gesture. Consequently, apart om their practical benefits, they should have a stimulating luence on public psychology.

lation May Be Accentuated.

The granting of such concessions will give some fillip to lationary pressures which, though less dominant than 12 18 months ago, are still exercising a profound influence on e Australian economy. Bank liquidity is greater than for ne years, and ample funds are available to finance normal ding activities. Stocks are tending to run down, and many ders are finding themselves under the necessity of replen-ing their inventories through both local and overseas rchases.

The first quarterly adjustment to the basic wage for 1953, nounced in February, indicating that the weighted average r all six capital cities had remained unchanged for the first ne since 1944, gave some slight hope that the continuous es in wages might be approaching an end. However, this pe was not encouraged in the second quarter, when increases 2/ per week were shown for Brisbane and Perth, 3/ for dney, Melbourne and Adelaide and 7/ for Hobart. The extent the rise since before World War II is shown by the follow-table setting out the basic wage payable in Sydney in the ond quarter of each of the following years:—

2nd Quarter	Basic Wage Per Week
1939	82/-
1946	99/-
1947	110/-*
1948	116/-
1949	127/-
1950	138/-
1951	180/-†
1952	223/-
1953	241/-

* Includes 7/- per week granted by the Arbitration Court on xation of "wage pegging."
† Includes 19/- "prosperity loading" granted by the Arbitration rt in November, 1950.

On present indications, it does not appear that the end of ge rises is yet in sight and this in itself is one of the most minant inflationary influences affecting the Australian nomy.

of Central Bank Credit.

Major interest lies in Commonwealth Government policy h regard to the financing of State public works programmes ough the use of Central Bank credit. This, of course, is in-ately wrapped up with the question of loan finance, not only the various State Governments, but also for the semi-governmental authorities, which have large-scale works on hand. It will be remembered that, in 1950-51, the Commonwealth Government, largely by means of increased taxation, budgeted for a considerable revenue surplus. With funds derived from other sources, the whole of that surplus was made available to the State Governments in the form of a short-term loan of £160 million to supplement new money loan raisings in the public market on behalf of the States and so ensure to the latter the full amount of £225 million guaranteed by the Commonwealth Government.

For 1952-53, however, the Commonwealth declined to accept the odium of making heavy tax imposts to help out State public works programmes and announced that public loan raisings for this purpose would be supplemented by issues of Treasury Bills. Although, at the Loan Council meeting in May, 1952, the States used their voting majority to approve State loan programmes for 1952-53 aggregating £247 million, out of a total of £351 million sought by the States as a whole, the Commonwealth refused to accept this figure. The matter again came up at a further Loan Council meeting in July last, when the Commonwealth intimated that the maximum amount which it was prepared to guarantee to the States for 1952-53 was £190 million. Of this it was anticipated that from £50 million to £60 million at most, would be obtainable from the public loan market. To make up the difference, the Commonwealth "agreed to arrange special assistance in respect of Loan Council programmes in 1952-53 up to a maximum amount of £135 million." Included in the total amount were £30 million for Housing Advances to the States and £2 million to provide "special assistance" to Western Australia.

Success of Commonwealth Loans.

During 1952-53, the Commonwealth made two approaches to the public loan market. The first of these was a relatively small cash loan of £20 million, issued in November, 1952, at 4½ per cent for nine years. This loan was fully subscribed. Then, in March, 1953, a cash and conversion issue of £77 million was launched. Of the total, £47 million was required to meet a 2 per cent loan of £47 million due to mature on April 15, whilst the balance of £30 million represented new money requirements. The loan was in two sections, 4½ per cent being offered at par for a currency of 9½ years, and 3 per cent at £99/10/ for a currency of 2 years and 8 months, the yield to redemption on the latter being approximately £3/3/10 per cent per annum.

This second issue was also a success, an amount of approximately £44 million being provided in the short-term section and £35 million in the long-term section. After full provision had been made for the conversion or redemption of the maturing loan, a balance of some £32 million remained available as new money. As a result of these two issues, therefore, the public loan market in 1952-53 provided a total of £52 million towards State works programmes (Commonwealth works are financed from revenue). On the basis of the £190 million State works programme aproved by the Commonwealth, this would have left a total of £138 million to be provided from sources other than the public market. Of this amount, the Commonwealth had agreed "to arrange special assistance" up to a maximum amount of £135 million, which implied the issue of Treasury Bills.

"Public" Issues of Treasury Bills.

At the recent Loan Council meeting, held on May 18 and 19, nothing was said which would confirm the previous existing belief that the whole of this £135 million would come from Central Bank credit—nor was anything said to indicate that it would not. However, in some well-informed circles, there has been considerable speculation as to the means which will be taken by the Commonwealth Government to implement its guarantee in respect of State loan programmes for the current financial year, 1952-53. This has been prompted by the course of "public" issues of Treasury Bills since June 30 last, when the total was £153 million, an increase of £45 million on the previous year's final figure of £108 million.

In the normal course, public issues of Treasury Bills rise steadily over the first nine months of each financial year, in

(Continued on next page)

NATIONAL RELIANCE INVESTMENT CO. LTD. (Contd.)—

consequence of advances made to finance approved State works programmes. In the final three months of the financial year, however, these Treasury Bills are usually progressively retired as Commonwealth revenue flows in with increasing rapidity.

"Internal" Treasury Bill Issues.

In addition to the "public" issues of Treasury Bills, certain "internal" issues are made. Thus, in the Budget Papers issued after the close of the last financial year, it was disclosed that, as well as the £153 million of "public" issues of Treasury Bills outstanding at June 30, 1952, there were certain "internal" issues which aggregated £252 million at that date.

These "internal" issues, which had fallen by £37 million during 1951-52, represented the investment of some £185 million standing to the credit of the National Welfare Fund at the end of the year, and of £67 million comprising investment of unspecified "general trust funds" controlled by the Commonwealth Government.

Thus, the total issue of Treasury Bills outstanding at June 30, 1952, was approximately £405 million, comprising "public" issues, £153 million, and "internal" issues, £252 million. This is a different story from that currently accepted by the general public, whose attention has been wholly concentrated on the "public" issues of Treasury Bills. Both issues bear interest at 1⅝ per cent per annum, but, whilst the maturity dates of the "public" issues are stated as being "various," the "internal" Treasury Bills are specified as maturing on June 30, 1953.

A close study of the Budget Papers for 1952-53 also discloses that, as at June 30, 1952, there was an item of "debentures," aggregating nearly £39 million, bearing interest at one per cent per annum and with "various" maturity dates. These "debentures" were apparently issued on behalf of the States, which were responsible for the payment of the interest applicable thereto. In the absence of any explanatory notes, it is impossible to assess the inflationary effect or otherwise of the movement in "internal" issues of Treasury Bills, or of the "debenture" issues made on behalf of the States.

Will Commonwealth Revenue be Used?

In respect of the "public" issues of Treasury Bills, the normal course was pursued during 1951-52 until late in June, 1952, but on the 30th of that month it was disclosed that the total "public" issue had risen by £45 million. This year, despite the guarantee by the Commonwealth to the States, the rise in Treasury Bills during the peak period has not been as great as might have been anticipated. The maximum was reached early in April, 1953, when the total was over £300 million, some £40 million above that existing at the corresponding period in 1952. Since then, there has been a progressive reduction and, early this month, the figure was down to around £210 million, which was only about £30 million above the total at the same time last year. The fact that the increase is so relatively small may be accounted for by the greater rapidity with which Commonwealth revenue has been collected during the current financial year. In view of these circumstances, the final result at the end of this month is being awaited with the greatest of interest.

If it is finally disclosed that the "public" Treasury Bill issue has been increased by the amount of £135 million envisaged under the Commonwealth guarantee to the States, then the effect will have been to intensify very materially the inflationary influences at work in the economy. If, however, the Commonwealth, finding itself with a substantial revenue surplus of unanticipated proportions, possibly around £20 million, decides to follow somewhat the same course as that pursued in 1951-52 and use all or part of that surplus to assist State works programmes, the degree of inflation will be less than had been originally anticipated.

No details of the trend of "internal" issues of Treasury Bills, or of the "debentures" issued on behalf of the States, will be available until the Budget Papers are issued subsequent to the presentation of the 1953-54 Budget to Parliament.

States' Loans Programme for 1953-54.

At the Loan Council meeting last month, the Commonwealth Treasurer, Sir Arthur Fadden, presented a stern front to the States, five of which are now under Labor control. The St had put forward loan programmes totalling £316 million 1953-54, whilst the Commonwealth Co-Ordinator-General Works was reported to have assessed their practicable ex diture for that year at the reduced figure of £284 million. Arthur Fadden, however, was quite definite that the maxi amount to which the Commonwealth would agree would be million, representing an increase of £10 million on last ye Commonwealth-approved figure. Included in the total was million for Commonwealth Housing Advances to the States compared with £30 million for this purpose in 1952-53. mately, the States, using their six to two majority on the Council, voted themselves £231 million, but Sir Arthur Fa remained adamant that the Commonwealth would not beyond £200 million—and even up to the latter amount onl certain eventualities.

From published reports it was deduced that this £200 lion was conditional on £100 million being available from public loan market—in other words, that the Commonwe guarantee over and above whatever amount it proved practic to raise from the public market would be limited to a maxi of £100 million. It is believed that the Commonwealth Gov ment's view was that the public market was unlikely to £100 million in 1953-54, indeed, that it felt that £75 mi was the absolute maximum which could be expected from source.

It was reported also that the Commonwealth guarantee made subject to the States agreeing to restrict semi-gov mental borrowings to "reasonable market expectations" "at rates no better than those currently authorised by the Council"; further that the States should accept the prin of works priorities based on national interest and co-ope with the Commonwealth towards that end.

From all this, it will be seen that no clear view can ye obtained of the extent of the inflationary Treasury Bill fin to be employed over the next twelve months. If, after the of the financial year, it is disclosed that the Commonwealth used Central Bank credit to finance the 1952-53 public w programmes to the full extent promised last year, namely, million, and then increases the issue by a further £100 mi in 1953-54, the total issue of Treasury Bills outstandin June 30, 1954, will be raised to £388 million. This would pare with £108 million outstanding at June 30, 1951, and million at June 30, 1952. In other words, the total issue at end of the 1953-54 financial year would be 3½ times existing on June 30, 1951, and 2½ times the final figure at 30, 1952. The inflationary influences of such an expansio Central Bank credit are too obvious to need further elab tion here.

It should be borne in mind that the Commonwealth Gov ment has command of certain internal sources of loan fin such as Commonwealth-controlled trust funds, and could, so desired, also utilise all or portion of any revenue su for the purpose of making loans to the States. Conseque it may later be found that Central Bank credit has not used to the full extent that now appears possible. Neverth on present information, a further material increase in T ury Bills appears probable over the next twelve months.

Semi-Governmental and Local Body Loans

Further conflict between the Commonwealth and S took place in regard to the permissible borrowings of governmental and local authorities in 1953-54. Whilst the S sought approval for a total of £122.5 million for these pur in the coming financial year, as against £128 million (£ million for semi-governmental authorities and £17.5 millio local authorities) approved under the "Gentlemen's A ment" for 1952-53, the Commonwealth would not agree amount greater than £90.5 million, comprising £75.5 millio the semi-governmental authorities and £15 million for authorities.

Although no official statistics are available as to the a amounts raised, publicly and privately, for semi-governm and local authorities, it is believed that, for 1952-53, the governmental bodies alone will receive approximately million in respect of this year. Consequently, the Loan

il decision as to the amount to be provided for them in 1953-54 s much more realistic than has been the case for several years.

In respect of the local governing bodies, the same degree f realism is not apparent, and the amount of £15 million fixed or them for 1953-54 may prove to be something like twice as nuch as they are likely to obtain. This was probably in the nind of the Commonwealth Treasurer, Sir Arthur Fadden, vhen, in addressing the N.S.W. Shires' Association in Sydney n June 10, 1953, he said that he was opposed to local governng bodies becoming directly dependent upon the Commonwealth Government for financial aid. "In recent years of financial difficulty," he said, "I have noticed a tendency for some local government men to suggest a form of centralisation, under vhich local governing bodies would become more closely reponsible to the Commonwealth Government than to State Governments. They suggest that the Constitution should be altered so that the Commonwealth might assume responsibility for providing finance direct to local governments."

Sir Arthur Fadden pointed out that, under the present Constitution, no such power existed and that it was undesirable because it would necessarily imply that the Commonwealth vould have the right to assume also the power to interfere n local government affairs. This would defeat the true purpose of local government, and, in his view, the appropriate solution vas for the States to accept greater responsibilities for local government.

Need for Statistics

Unfortunately, official statistics are not available showing the total amount of actual loan-raisings (public and private) on behalf of semi-governmental and local authorities in each financial year. The absence of reliable official statistics in this respect, and also in regard to public and private debenture and unsecured notes issues on behalf of companies, represents a grave deficiency in Australia's financial system. Lack of these statistics precludes any reliable conclusions being reached as to the total amount of fixed interest capital required in each year in relation to the funds available to meet such demands.

The Commonwealth Treasury, which provides such comprehensive and authentic financial information in the Budget Tables and Papers, could render great service to the financial community, and to Australia as a whole, by publishing annually statistics setting out the details of such loan raisings.

Course of Interest Rates.

As might have been expected from a Loan Council meeting dominated by an overwhelming majority of State Labor Governments, the proceedings indicated a definite desire to maintain the arbitrary pegging of interest rates. Indeed, according to the press reports published subsequent to last month's meeting, the Loan Council decided not to permit any variation in the 4½ per cent rate for Commonwealth loans or 4¾ per cent for semi-governmental loans during 1953-54.

These reports appear now to have been exaggerated, and it is understood that, whilst the five Labor-controlled States were in favour of this course, no formal resolution to peg interest rates at current levels for the whole of 1953-54, was adopted by the Loan Council, or even submitted to it. Such misunderstandings as to the actual decisions reached at Loan Council meetings are by no means uncommon. They could be avoided very simply if a detailed official statement were issued and published in the press in full as issued) immediately after the conclusion of each meeting, setting out particulars as to the policy decisions reached, and as to the loan programmes approved under the various headings and the means by which they were to be implemented.

Such a course would not only result in keeping the public fully informed on vital matters of government and semi-governmental finance; it would also protect the Commonwealth and State Governments and their expert financial advisers from adverse criticism based on inadequate information.

In respect of Commonwealth loans, it may prove to be practicable to hold the rate at 4½ per cent following the success (though not overwhelming success) of the last two Commonwealth loans issued in November, 1952, and March-April, 1953, respectively. Provided demands on the market are reasonable although under the approved plan it is proposed by the States to seek up to £100 million of new money from the market in 1953-54, as compared with £52 million actually raised in 1952-53—it would appear that a degree of stability has been reached in the Commonwealth loan market. This is supported by the recent strength of the Stock Exchange market for Commonwealth loans, in which public buying has been considerably greater in proportion to "official support" buying than at any time during the last two and a half years.

The 4½ per cent rate is, indeed, the best which has been available from Commonwealth loans since 1931, and its attractions are materially enhanced by the tax rebate of 2/ in the £ conceded in respect of interest derived therefrom. The same degree of stability has not been reached in respect of semi-governmental loans. The maximum rate for public issues in this category is pegged at 4¾ per cent per annum, whilst private issues are not permitted at a higher rate than £4/17/6 per cent without, in either case, any tax rebate similar to that applying to Commonwealth loans.

Splendid Wool Returns.

The present position of, and the immediate outlook for, Australia is materially better than appeared probable in the closing months of the last financial year. This improvement has been largely fortuitous—it has resulted mainly from a continuation of the long period of good seasonal conditions, and particularly, from the unexpectedly favourable wool market which has ruled during the second half of the selling season. Due to the excellent seasonal conditions, and also in a large measure to the wholesale destruction of rabbits through myxomatosis, which has increased carrying capacity up to 25 per cent in some areas, the wool clip for 1952-53 will be substantially greater than last season. According to the "Annual Review" of Winchcombe, Carson Limited, published under date May, 1953, this season's clip will approximate 3,700,000 bales, as compared with 3,391,000 bales in 1951-52. This represents an increase of around 309,000 bales.

For the first 11 months of this season, the average price realised for greasy wool was 83.15 pence per lb., as compared with 73.23 pence per lb. for the corresponding period of 1951-52. With greater realisations at higher prices, total receipts from wool sold in 1952-53 appear likely to be some £80 million above those for the previous season.

Consequently, although wool revenue for the full season will not be anything like as high as the £636 million received in the record season of 1950-51, when the average price of greasy wool was 144.94 pence per lb., it will still represent the second best season in Australia's history. Moreover, with the building up of Australia's sheep population to around the previous all-time record figure of 125 million, and the cutting of larger fleeces per sheep, the production outlook appears very favourable, conditional on continued good seasons. On the other hand, wool prices have shown some decline during the last few weeks of the selling season, and the trend of values in the new selling season, which commences in September, will be awaited with interest and perhaps a certain amount of anxiety.

Resurgence of Primary Industries.

But wool, whilst easily the largest contributor to Australia's prosperity, is not the only product which has given cause for satisfaction in 1953. Quite a transformation has come over the primary industries during the past few years through much greater mechanisation, a vast improvement in scientific methods, particularly in soil treatment, which is bringing large areas of poor-quality lands into production, and, once again, the providential good seasons and satisfactory prices. According to the Commonwealth Bureau of Agricultural Economics, the gross value of rural production in Australia in 1952-53, is estimated at £1,090 million, which is 17½ per cent above that of the previous year, though 7½ per cent below the record figure of £1,173 million in 1950-51, when the pattern was distorted by fantastically high wool prices.

Great significance must be attached to the phenomenal growth in sugar production, to which reference was made at the annual meeting of The Colonial Sugar Refining Company

(Continued on next page)

NATIONAL RELIANCE INVESTMENT CO. LTD. (Contd.)—

Limited by the chairman of that great company, Mr. E. R. Knox. According to his statement, favourable conditions, particularly in Queensland, suggested that Australia's raw sugar crop in 1953 would be about 1,200,000 tons, representing an increase of nearly 30 per cent on the 1952 record crop of 916,000 tons. This large increase would be due to the excellent growing conditions experienced, new lands settled under the expansion plans of recent years, and increased milling capacity (provided largely by The Colonial Sugar Refining Company Limited, which has been in existence since 1842, and which has been outstanding amongst Australian companies for long vision and efficient long-term planning).

Mr. Knox also referred to the fact that, last year, the term of the British Commonwealth Sugar Agreement between Empire exporting countries and the Government of the United Kingdom, had been extended by one year to 1960. The price payable by the British Food Ministry for 314,000 tons of export sugar from Australia had been increased by £3/16/8 sterling per ton. This tonnage is known as the "negotiated price export quota." The balance of raw sugar for export, he said, "has to be marketed to the best advantage in preferential tariff markets, i.e., on the basis of world price plus preferences. Over the past year, the world price has fallen and is now appreciably below the price payable by the Ministry of Food for 'negotiated price' sugar. Australia expects to fill its total quota, 600,000 tons of raw sugar."

Other Primary Products.

In addition to wool and sugar, the output of various other primary products, including milk, butter, cheese, lamb, mutton, beef, dried fruits, wine, rice and cotton, are all well above that of last year. Production of oats and barley reached record levels in 1952-53, whilst wheat held its position quite well. The outlook for cereal crops in the coming season has been improved by recent, though rather belated, rains in the growing areas.

During the years of high prices which have been experienced since 1945, farmers and graziers have enjoyed high incomes and have been able to devote substantial sums to the improvement of their properties. Thus, despite high costs, their position is better than it ever was before in the history of Australia.

Key Industries Better.

As far as secondary industry is concerned, there has also been a remarkable increase in the production of basic requirements, aided by the improved coal position, which has undergone a complete reversal during the last three years. Up till 1949-50, an acute shortage of coal existed in consequence of industrial upheavals. Now, however, Australia is faced with the problem of disposing of substantial excess stocks. For the first time for a decade, Australian steel works are working to capacity, and this year's output will approximate 2,000,000 tons of ingot steel, thus providing cheaper steels to replace high-priced imports and possibly leading to a moderate export trade. Building materials are also more plentiful.

On the other hand, a number of industries, particularly those associated with textile production and the manufacture of non-essentials, have been passing through some difficulty. Nevertheless, employment numbers are high and are increasing, and the proportion of genuine workers without work is no greater than is normal allowing for customary seasonal fluctuations.

Favourable Trade Balance.

As a result of these improved conditions, plus the restriction of imports, which, however, has been relaxed to some extent in recent months, Australia has been piling up a very satisfactory favourable overseas trade balance, which looks like reaching about £300 million for the full year, as against an adverse balance of £383 million last year. This has resulted in a considerable augmentation of gold and balances held abroad, which have risen from about £300 million at June 11, 1952, to £477 million for the week ended June 10 last. Due to these factors, also, as previously pointed out, bank liquidity has been materially improved. Retail trade is not as buoyant as it was earlier in this calendar year and the more cautious buying policy on the part of the public, whi developed early last year but was later relaxed for a tim seems recently to have reappeared.

The major problem confronting trade and industry in Au tralia still remains that of high and constantly rising cost In this connection, I was most interested to read a few wee ago a press report recording the comments of the Honourab David F. Brand, chairman of The English, Scottish and Au tralian Bank Limited, who had recently visited various Stat in Australia. After remarking that he had paid a previo visit to Australia two years ago, Mr. Brand said:—

> Travelling round, I did strongly get the impression th production costs in this country have risen and are risi out of line with general world trends. It is obvious to an one that the current overseas trade position of Austral is excellent . . . The position is sound today, but, if pr duction costs are not kept down, there might well be dif culties ahead . . . In my opinion, Australia has got a ve high standard of living, and there is no earthly reason wh she should not maintain it, but the people cannot hope have that standard of living unless they are prepared give a related amount of effort. I feel that there are dange in the cost structure at present but that the solution comparatively simple — the people must produce a litt more for the same reward . . . It is not increased productio that causes unemployment. It is just the reverse. It inability to produce at the right price that might lead unemployment . . . I do not see the necessity for a long working week than 40 hours, but I feel that a real effort put 40 hours work into a week would achieve great thing

That appears to me to be an admirable summing up of th position in Australia by a man of wide experience and balanc judgment.

Implications of Korea.

In view of the improvement which has taken place in Au tralia's economy since early in 1952, the greater, though pe haps temporary, political stability resulting from the Sena elections, and the certainty of increasingly strong inflationar pressures, it would normally be reasonable to expect that ord nary shares in soundly-established Australian companies wou command increased interest and rising prices. Once agai however, it has been borne in upon us that Australia cann live a separate existence, unaffected by the influences whi govern the course of world affairs. Consequently, the pro pective ending of open warfare in Korea must affect Australi just as it will affect the United States of America and th United Kingdom, because it will reduce the demand, and there fore the prices payable, for certain basic materials. Alread there has been evidence of declining prices for base metals, an this may well be followed by decreased values for othe commodities.

At this stage, it is not possible to make even an approx mate estimate of the effect which an armistice in Korea wou have on the economies of the Western Democracies. It may l that, economically, we shall find that there is a large price to pa but, whatever the price may be, it will not be too high, long as it results in relieving the men who have been fightir our battles in Korea from the suffering and risk of death a disablement which they have incurred on our behalf.

Australia's Future Position.

Apart altogether from international considerations, gre problems still remain to be surmounted in Australia. T greatest of these is that of adjusting costs to world standard In this respect, it has been gratifying to learn in a number quarters that improved techniques, more efficient and mo scientific management, and greater earnestness and concentr tion on the part of employees, is serving in some industri to offset to some extent the disabilities resulting from Au tralia's high cost structure.

This improved atmosphere if extended into other fiel should greatly increase confidence in Australia's future and the ultimate attainment of a sound economic base, which wou enable national development to proceed at a steady and perha accelerated pace.

Winterbottom Motor Co. Ltd.

Distributors of Motor Vehicles and Tractors.

Reg. Office: 199 St. George's Tce., Perth. **Directors:** E. Blanckensee (Chairman), N. W. Harper, D. Grayden, J. S. Foulkes, C. R. Angell. **Auditors:** McLaren & Stewart.

37th Year ended June 30, 1952. Meeting September 26, 1952.

Demand for some makes of motor vehicles exceeded the supply, which was limited by import restrictions. Sales of farm machinery by the company held their place in the market.

Profit was slightly lower at £241,730, giving a fourfold cover for the 20% dividend, which was reduced from 35% because of the high overdraft.

17th Year ended Dec. 31, 1952. Meeting June 25, 1953 (London).

Although ore production was 13% higher at 239,992 tons, lower prices for output combined with increasing costs, resulted in a lower profit of £558,020 (last year's record was £656,872). Cost of mine development was higher at £251,681 (£196,344 in 1952).

Dividend was reduced from 50% to 30%, the same as in 1949 and 1950.

During the year, further progress was made towards developing the mine as an independent producer. Total tonnage milled was 235,478 tons (211,608 tons last year).

Ore reserves are stated at 2.4 million tons, assaying 10.6% lead, 2.6 oz. silver and 10.9% zinc.

A comprehensive review of the company's activities is contained in the Chairman's Annual Address reprinted opposite.

New Broken Hill Consolidated Ltd.

Lower Metal Prices Affect Results.

COMPANY'S OWN MILL COMMENCES OPERATIONS

SATISFACTORY EXPANSION OF ORE RESERVES.

MR. JOHN R. GOVETT ON MINE DEVELOPMENT COSTS.

The Seventeenth Annual General Meeting of New Broken Hill nsolidated, Ltd., was held on June 25 at 37 Dover Street, ndon, W.1. The following is the statement by the Chairman, Mr. n R. Govett, which has been circulated with the report and ounts for the year ended December 3, 1952:

The profit for the year 1952, before providing for taxation, ounted to £818,780, compared with £1,338,884 for 1951. This re- tion of £520,104 results from lower prices having been realised lead, zinc and silver than in the previous year and from an in- ase in costs generally and particularly of wages. The profit has n arrived at after charging £251,684 for mine development, as inst £196,344 in 1951, and after providing £245,600 for depreciа- n, as against £178,000 in 1951.

The charge for taxation, including profits tax, on the profits the year amounts to £260,760, which compares with £719,860 the previous year. This leaves a net profit for the year of 8,020, a reduction of £61,004 on the result for 1951. Out of this fit the board has decided to transfer the sum of £400,000 to eral reserve, compared with £300,000 last year.

An interim dividend of 9d. per share was declared in Novem- 1952, and the Board now recommends that a final dividend of per share be paid, making a total distribution for the year of per share. This compares with 2/6 per share for 1951, but is same as the distribution for 1950.

An amount of £37,848 has been transferred from provision for ation, being in excess of requirements for previous years, and surplus carried forward is £241,836, compared with £226,663 year.

Capital expenditure was again a considerable figure, £655,090 g spent on mine development, including shaft-sinking, during year, and £678,083 on machinery, plant, buildings and equip- t, giving a total of £1,333,173 for the year.

Production.

Productive operations were carried out on 229½ days during year 1952. Four days were lost on account of stop-work meet- s in connection with the negotiations for the new Industrial eement, and two days and a half were lost as a result of two or disputes which were satisfactorily settled.

Ore production from the company's leases in 1952 totalled 922 tons, compared with 212,178 tons in 1951—making a total e production first commenced of just over a million tons. The e of production per working day was 1,045 tons, compared with tons in 1951. Details of production are as follows:—

	Tons.	Lead. P.C.	Silver. Oz.	Zinc. P.C.
16 level and above—				
evelopment	16,342	4.9	1.0	13.6
toping	108,276	4.9	1.0	15.2
ow No. 16 level—				
evelopment	28,862	11.0	2.7	9.1
toping	86,442	12.8	2.9	9.7
Total for 1952	239,922	8.5	1.9	12.4
Total for 1951	212,178	8.6	2.0	12.3

oduction from above No. 16 level was wholly zinc lode drawn n No. 7 to No. 16 levels, and production from below No. 16 l was mainly lead lode from Nos. 17, 18 and 19 levels.

Tonnage milled and concentrates produced in 1952, as com- d with 1951, were as follows:—

	1952.	1951.
milled (tons)	235,478	211,608
l concentrates produced (tons)	25,284	22,883
age grade—		
ad (per cent.)	75.9	76.0
lver (oz.)	16.0	16.9
aining—		
coverable lead (tons)	18,430	16,706
lver (oz.)	405,801	386,617
concentrates produced (tons)	51,838	46,231
e per cent. zinc	52.4	62.4

In September last, with the completion of the 2,600 h.p. skip er on the haulage shaft, the surface crushing plant, crude ore eyor and No. 1 section of the mill, the hoisting of ore through haulage shaft and milling in the company's own mill were nenced. The tonnage so treated up to the close of the year 45,110 of the above total of 235,478 tons, and was practically rom stopes above No. 16 level. The lead concentrate from the ment of this ore averaged 1.5 per cent. to 2 per cent. copper, investigations are in hand in the mill with a view to recover- he greater part of this copper as a separate concentrate.

Pending completion of the service shaft, expected in 1954, the ge shaft is required to handle men and supplies into the mine mullock out of the lower levels, and haulage of ore has there- to be confined to one shift. This limits the tonnage hauled to oximately 1,000 tons per day, which is sufficient to maintain mill on a two-shift basis. All ore production in excess of the shift capacity of the haulage shaft will continue to be hauled gh the Zinc Corporation's main shaft and treated in their il until the service shaft is in operation.

The resale of ore to the Zinc Corporation in replacement of the tonnage purchased by the company under the Sale of Ore Agreement has been deferred.

Ore Reserves.

The expansion of ore reserves continues satisfactorily with an inclusion of a greater amount of the richer lead lode.

The classification of ore reserves as adopted for 1951 has been retained and the ore reserves as at December 31, 1952, are calculated as under:—

Above No. 16 level, 800,000 tons, assaying 5.2 per cent. lead, 1.0 oz. silver, 14.2 per cent. zinc.

Below No. 16 level, 1,600,000 tons, assaying 13.3 per cent. lead, 3.4 oz. silver, 9.3 per cent. zinc.

Total, 2,400,000 tons, assaying 10.6 per cent. lead, 2.6 oz. silver, 10.9 per cent. zinc.

The increase in ore reserves of approximately 400,000 tons under the classification "below No. 16 level" is largely due to development on No. 19 level. These ore reserves are fully outlined by development openings or are in process of being stoped. Blocks of ore partially developed or only outlined by diamond drilling are excluded.

Development and Diamond Drilling.

Development has been concentrated on the opening up of the lead lode ore-bodies on No. 19 level where 2,446 feet of driving and cross-cutting was completed in 1952, on development of plats, cross-cuts and ore passes in the haulage and service shaft areas on Nos. 19 to 22 levels, and on the excavation for the underground crusher station.

The development of the trial sub-level stope in the zinc lode between Nos. 14 and 16 levels, referred to in my statement last year, has continued.

Further transverse drilling on No. 19 level outlined the complicated No. 1 lens overlying the Nos. 2 and 3 lens of the lead lode.

On No. 22 level (3,240 feet) an important series of lead lode intersections was obtained from a fan of five boreholes drilled from the haulage shaft. These intersections show that No. 1 lens in the eastern syncline continues strongly, and the eastern limbs of Nos. 2 and 3 lens on the main lead lode anticline are also strongly developed. Two boreholes were extended sufficiently to show that the downward extension of the western lead lode limbs does not reach No. 22 level at this section.

These boreholes on Nos. 19 and 22 levels considerably extend our knowledge of the outline and extent of the ore bodies near the main shafts, and the plans and sections accompanying this statement show the satisfactory results obtained from this drilling and from development work on No. 19 level.

In the exploratory drilling campaign from the surface at 3,000 ft. south of the boundary or 2,000 ft. south of the haulage shaft, deflected borehole No. 250A was completed at an inclined depth of 4,307 ft., equivalent to a vertical depth of 3,200 ft. Between 3,860 ft. and 3,993 ft. inclined depth, the borehole intersected several seams of low grade mineralisation, at approximately 500 ft. below No. 18 level. This mineralisation resembles the lower limits of the lead lode as known in more northerly parts of the field. It strengthens the belief that flat reversal of the southerly pitch of the main lode system has brought the lead lode horizons higher on this section than at the haulage shaft. Such reversals have occurred further north in the leases of Broken Hill South Ltd., and of the old Proprietary Mines.

The result of this exploration has been to centre the exploratory target area at or closely below No. 18 level over the entire distance between the haulage shaft and 2,000 ft. further south. Thus, the exploratory drive, at present advancing from the haulage shaft on No. 18 level, which on May 1, 1953, was 1,125 ft. south of the shaft, is expected to be within continuous short drilling range of the target area as far south as borehole No. 250A. Since the drive is expected to advance to this position by early October of this year, and it affords sites which present superior opportunities for testing lode extensions, drilling will be carried out from these sites in preference to further long, costly and difficult deflection drilling from the surface borehole No. 250A which, nevertheless, has provided valuable information.

The first borehole (No. 326) from No. 18 level south drive—at 360 ft. south of the haulage shaft—was drilled horizontally in a westerly direction for a distance of 779 ft. It is intersected 77 ft. averaging 6.4 per cent. lead, 1.2 oz. silver, and 10.9 per cent. zinc in the lower extremity of the eastern zinc lode before passing through the overwall gneisses of the lead lode anticline, and entering the low-grade mineralisation on the western side. A depressed borehole (No. 333) from the same drilling station has since been commenced to test for the lead lode on the same section as borehole No. 326. This hole had reached a depth of 420 ft. on May 1; after passing through 15 ft. of eastern zinc lode ore assaying 9.9 per cent. lead, 2.2 oz. silver and 12.2 per cent. zinc, further intersections were obtained over a width of 35 ft. assaying 11.3 per cent. lead, 2.1 oz. silver and 29.1 per cent. zinc, considered to be the eastern limb of the No. 1 lens orebody. Drilling is still in progress.

(Continued on next page)

NEW BROKEN HILL CONSOLIDATED (Ltd.)—

A further borehole (No. 330) from the No. 18 level south drive—at 730 ft. south of the haulage shaft—was also drilled horizontally in a westerly direction and was completed at 937 ft. The geological succession intersected by this hole is similar to that in hole No. 326, including 116 ft. of eastern zinc lode, averaging 4.0 per cent. lead, 0.9 oz. silver, and 6.7 per cent. zinc. The lead lode was not intersected in the anticlinal position, but the highly folded and crenulated gneisses closely resembled those known in the overwall of the lead lode and indicate that the lead lode is not far below No. 18 level at this section. A depressed borehole (No. 336) from the same drilling station as borehole No. 330 has just been commenced.

The similar relative positions of comparable intersections in boreholes Nos. 326 and 330, and of the zinc lode boundaries, indicate that the pitch of the lode system is almost horizontal in this vicinity.

The widths, positions and grades of the intersections conformed with our expectations.

Shaft Development.

The work on the service shaft has continued to be slower than we had hoped, owing to difficult ground conditions and blockages in the pilot winze through which broken rock from stripping operations is drawn.

To recover some of the lost time. the shaft operations have been divided into three sections. In the first section, which extends from the surface to No. 8 level, 168 ft. of steel sets have been installed; this work has now been suspended while the concrete headframe is being constructed. In the second section below No. 8 level, steel sets are being installed, and at May 1, 1953, installation of 575 ft. had been completed. In the third section below No. 16 level, stripping of the shaft to full size and concreting are being carried out, and at May 1, 1953, these operations had reached a depth of 2,835 ft. and 2,813 ft. respectively.

Surface Works.

The surface construction programme is well advanced. In addition to the mill which was commissioned on September 8, the surface plat and the No. 1 changehouse were completed during the year and brought into use. The building accommodating the technical staff, survey staff and ambulance room and the maintenance building have since been completed and occupied. When the concrete headframe for the service shaft is completed towards the end of the present year, the greater part of the original surface construction programme will have been accomplished. Good progress has also been made with the layout of roads and the general development of the surface area adjacent to the shafts and other surface buildings.

All plant and equipment operated satisfactorily, except that vibration developed after some 2,000 hours' running in the No. 1 motor generator set driving the skip winder. Adjustments subsequently carried out in conjunction with representatives of the manufacturers should enable this set to operate until the No. 2 set, erection of which has been accelerated, is ready for use. The No. 2 set will then be used to drive the skip winder, while any modifications that may be found necessary to the No. 1 set are undertaken. In the meantime, I am glad to be able to say that although this trouble has involved considerable expense and inconvenience to the company, our production has not been affected.

Water Supply.

Rainfall at Broken Hill in 1952, although up to average, was evenly distributed and intake of water to the storage reservoirs was almost negligible. From March until completion of the Darling River pipeline in June, 1952, we were entirely dependent on water brought in by rail, but fortunately our operations were not interrupted. The Darling River pipeline is now in use at reduced capacity with pumping equipment temporarily installed, and the permanent pumping stations and auxiliary equipment should be completed shortly.

Transport of Concentrates.

In the course of 1952 a substantial improvement took place in the rail services provided by the South Australian Railways as a result of additional rolling stock and locomotives having been brought into service during the year. In addition to handling the current output of lead and zinc concentrates from the Broken Hill mines, the accumulation of zinc concentrates belonging to all the mines, which had built up at Broken Hill over the recent years when rail services fell substantially short of requirements, including deliveries over the N.S.W. system, was reduced by more than 70,000 tons.

Employees and Industrial Relations.

It is a matter for congratulation, not only to our own staff and employees, but also to those of our associated companies at Broken Hill, that 1952 was the first year since the field commenced in which no fatal accidents occurred in any of the Broken Hill mines. This reflects the progress made in safety and accident prevention. In our own case, 1952 is the third year in succession without a fatal accident on the company's leases, and special congratulations are due to all those responsible at Broken Hill.

The industrial situation at Broken Hill continued to be satisfactory, despite the fact that negotiations for a new agreement to replace the one due to expire in August, 1952, were not completed until the middle of April, 1953, and that the negotiations had reached a stage at the end of March when a stoppage was threatened by the unions. However, a Conciliation Commissioner was nominated by the Registrar of the Industrial Court of New South Wales, and in voluntary conferences a settlement was reached on claims which had not already been resolved. The final points of differences between the parties related to the qualifications for long-service leave, in particular in respect of past service. In 1951 the New South Wales Parliament passed an amendment to the New South Wales Industrial Arbitration Act making it obli tory for employers in that State to provide for their employ three months' long service leave for 20 years' continuous serv Broken Hill was exempted from the provisions of this Act on understanding that corresponding benefits would be granted voluntary agreement retrospective to July 1, 1951. The long-serv leave provisions now included in the new Industrial Agreement in many respects more favourable than the provisions of the A but are considered fair, having regard to the conditions in Broken Hill mining industry.

Negotiations also took place in relation to increased bene payable under the contributory pensions scheme for employees Broken Hill. These were concluded after the end of the y under review, when a new scale of benefits was agreed involv an increase in both employer and employee contributions fr the present rate of A.5/- each per week to A.7/6 each per week

At the end of 1952 the number of our daily paid employ had increased to 729, as compared with 639 at the end of 195 a gain of 90. Some difficulty has been experienced with the ope tion of the modified residential classification for employment troduced in 1950. This still gives preference to men born or p viously resident for a certain period in Broken Hill. Some these men, for various reasons, are unsuitable for the mining dustry, but, until other employment can be found for them or unions agree that they are unsuitable, we are restricted in engagement of men under the modified qualifications. Whilst available lead lode and other important development faces w manned during the year, the zinc lodes, as a result of this rest tion of engagement, were not completely worked. Early in current year the difficulty referred to was at least tempora overcome and the labour force at April 18, 1953, showed a furt increase of 66, making a total of 795 men.

The various employees' housing schemes now being carr out in association with the Zinc Corporation have progressed sa factorily. Through the co-operative societies, the total number houses financed up to 1950 was 456; this figure increased to 607 the end of 1951 and to 694 by the end of 1952. We shall conti to extend these schemes and encourage our employees to t advantage of the facilities offered.

Industrial Training.

Increased attention to the problems of industrial training to the decision early in the year to set up, in association with Zinc Corporation, a new department at the mines to co-ordin and extend the training programme of both companies. An off with experience of industrial training in England has been pointed to take charge of the new department, and two offic from Broken Hill have been given training overseas in the meth adopted in England. The new training programme will be int duced during the present year and excellent results are confide expected from this development.

Sales.

In 1952 sales were less than production by 1,536 tons of coverable lead, 24,726 ozs. of silver and 957 tons of zinc conc trates.

Total sales in 1952 as compared with 1951 were as follows

Recoverable Lead—		
1952	16,894 t	
1951	18,592 t	
Silver—		
1952	381,075 o	
1951	422,325 o	
Zinc Concentrates—		
1952	50,881 t	
1951	34,201 t	

Realisations during 1952 were made on the basis of the foll ing average metal prices expressed in United Kingdom currer compared with 1951:—

	1952 per ton £ s. d.	195 per £ s.
Lead—		
Australia	62 17 6	53 11
Other countries	112 16 3	147 1
Silver—		
Pence per oz.	74.78	7
Zinc—		
Australia	59 19 4	50 1
Other countries	139 10 8	162 7

In 1952 the company's lead sales were divided as to 20.5 cent. in Australia and 79.5 per cent. to other countries. The c pany's contribution to the Australian domestic zinc requirem amounted to 33.5 per cent. of its production.

Conclusion.

The year 1952 marks an important stage towards the com tion of the 10-year programme commenced in 1945 for develo and equipping the mine. Hitherto, use has been made of the Corporation's main shaft and concentrating mill to hoist and t all the ore produced from the company's leases; towards the c of the year under review the hoisting of a substantial propor of the company's ore through the new haulage shaft and its sequent treatment in the company's own mill were commen There is still, however, some way to go before the original gramme can be regarded as completed. Shortages of materials late deliveries of equipment have delayed construction work the surface, and in some cases upset our schedule for diffe sections of the work; our progress in developing the work underground has also been retarded through lack of skilled mi in sufficient numbers to cover the full needs of our develop and stoping operations, and to some extent, as indicated earli this statement, by unexpected delays in shaft sinking due to

und. Whilst we are therefore behindhand on our original nedule, I feel that in view of all the circumstances the point w reached in carrying the programme into effect can be re-ded as satisfactory, and reflects with credit the great efforts ich our management, staff and employees have put into the re-ts achieved.

Our original long-term budget provided for an output in 1953 270,000 tons of ore. In the current year to date underground ciency has shown a marked improvement, indicating that the icy of providing the most up-to-date underground mechanical ipment is being justified to the advantage of the employees and company, and subject to any unforeseen circumstances beyond control of the management, we shall be disappointed if the ve tonnage estimate for the year is not substantially exceeded, h ore of approximately the same grade as in 1952. This, to-her with the indications that the rise in the basic wage in stralia has been checked, should stabilise if not reverse the up-rd trend in costs with which we have been faced since the de-opment of the mine commenced. Nevertheless, the sharp decline the prices of our products must have a serious effect on our enue.

In 1948 we had anticipated that the total cost to completion of 10-year programme would be £5,100,000, including expenditure £1,565,000 up to the end of that year. Throughout the whole of development period to date we have, however, been faced with stantly increasing costs of construction, which in total have n very considerable. Looking back to 1945, when we com-nced the programme, and taking that year as 100, the basic wage in 1952 was 206, lead bonus 530 and cost of stores 338. As a result we now estimate that the total cost of completion will be approximately £8,000,000, of which £5,539,000 has been spent up to December 31, 1952. This has been financed by the subscription of approximately £3,000,000 by shareholders and the retention of profits, including provision for depreciation, to the extent of £2,343,000. The balance of expenditure on shafts, buildings, plant and equipment is at present estimated at £1,200,000, and further mine development to be met out of capital funds during the next three years may involve a like sum. Approximately £1,000,000 would normally be set aside in that period for depreciation, thus leaving a balance of requirements of £1,400,000.

We remain confident that the mine will be among the lowest cost producers in the world, but with the immediate outlook for metal prices it is not possible to estimate now with any accuracy probable future revenue, or, indeed, how much we may be able to retain in the business to meet the balance of capital expenditure for the completion of our programme.

While it is hoped that this completion may be achieved without having recourse to further permanent financing, some additional finance of a temporary nature will be required until we see some turn in the trend of metal markets and prices once again become more remunerative.

Finally, it gives me pleasure to pay tribute once again to the loyal services rendered by our staff and employees, and I am sure that shareholders will wish to be associated with the Board's sincere appreciation of all that has been done by them throughout the year to further the success of our undertaking.

Tecnico Limited

Manufacturers of Electrical and Aircraft Equipment, and Radio Component Parts, Importers and Wholesalers.

f. Office: 83 Renwick St., Marrickville, N.S.W. **Directors:** A. C. Millingen (Chairman and Manag. Director), L. A. Lister, R. L. Richards, R. V. Bridekirk, J. N. Kirby, L. Fyvie Watt. **Auditors:** Offner, Hadley & Co.

h Year ended June 30, 1952. Meeting November 7, 1952 (Sydney).

Although trading for the first six months was satisfactory, the latter part of the year sales of domestic appliances fell ay substantially. Profit was £21,461 lower, and ordinary idend was reduced to 3¼% (8% last year).

General and Produce Merchants, Station Suppliers.

Reg. Office: 31 King St., Melb. **'Phone:** MB 2771. **Directors:** W. J. Allison (Chairman and Manag. Director), H. M. McBean, A. V. Walker, C. L. Kimpton. **Auditors:** Messrs. Godfrey, Darling & Co.

69th Year ended January 31, 1953. Meeting May 12, 1953.

Turnover of £6.5 million was lower than last year's record of £7.3 million, due largely to a reduction in imported heavy hardware lines. Trading in locally-produced goods increased. Profit was 40% lower at £90,992 and dividend was 1% less at 11%.

In his address to shareholders at the Annual Meeting on May 12, the Chairman, Mr. W. J. Allison, said:—

This is the first time for ten years that your Directors have not been able to report better figures in turnover, gross profit and net profit than in the preceding year. As stated in the report, turnover in the previous year was substantially increased by sales of imported heavy hardware lines. The demand for such goods fell away about eighteen months ago and, indeed, in some lines ceased altogether. In 1951-52, sales of such goods amounted to nearly £1½ million. The absence of this trade had its effect upon the turnover of the company, which fell from £7,300,000 to £6,500,000. It will be seen from these figures that general trade, apart from imported goods, increased.

The result for the year—net profit of £83,401—enabled the Directors to allocate to general reserve £23,875, and to recommend to you today a final dividend of 5%, plus bonus of 1%, making dividend of 10% and bonus of 1% for the year, and absorbing £55,000. The balance of £4,526 is added to the "carry forward", increasing it to £40,548.

Gross earnings declined from £954,000 to £857,000, whilst expenditure, apart from provision for taxation, increased from £660,000 to £712,000. Economies were effected during the year, but, notwithstanding this, expenditure rose as the result of an increasing wage level during the year and the higher cost of services and materials used in the conduct of our business.

Balance Sheet.

The balance sheet shows that your Directors were able to achieve a greater liquidity in the company's position. Stock on hand was reduced during the year from £1,333,000 to £832,000—a drop of half a million pounds. Trade debtors were also decreased from £657,000 to £563,000. Freehold land and buildings increased from £222,000 to £271,000 due to the rebuilding of branch premises at Bourke, N.S.W., previously destroyed by fire, and extensions and alterations at other branch premises. Trade creditors are lower at £381,000 compared with £538,000 twelve months earlier, whilst the net overdraft at January 31 last, was £61,000 compared with £411,000 at the end of the previous year.

I should add that in addition to the reserves shown in the balance sheet, the company has a substantial doubtful debts reserve which is deducted from the total of book debts.

Trading.

It is interesting to recall trading conditions over the last thr years. The first two were a period of great trading activity; la year was a period of uncertainty and adjustment. The current ye should be a period of stability and, therefore, of consolidation.

During 1951, the position in relation to Australia's exports cloud the future. In the current financial year Australia's export incor should reach £800 million, making it the second highest on recor This comes when we are reaching a greater degree of stability wage levels. During the nine months ended August, 1952, the ba wage increased by 13¼%. In the next nine months ended last mon the increase was 3¾%. Whilst the financial aspect of our expo is satisfactory, there has been reduced production in some prima products in relation to the growth of population, and this is a mat for concern and for correction.

Your company trades mainly with primary producers. With pa able prices, in the main, for their products, their financial positi generally is good, and with increasing stability in expenditure yo Directors expect to be able to further consolidate the activities the company in the current year.

Staff.

On behalf of shareholders and the Board of the company express to the executive officers, branch managers and all memb of the staff of the company our warm thanks for their work dur last year.

It has been the practice of the company to make incentive pa ments to the staff over recent years, and that was continued i year, although, because of the reduced net profit, on a lower sc

There are over 200 members of the staff who are shareholde in the company.

Established thirty-one years ago, the company's staff provid fund has been a major factor in maintaining a contented st Employees of the company now have standing to their credit a to of over £200,000. This is invested in trustee securities, freehold p perty, and in loans on mortgage to members for home purchase home building purposes. The balance is placed on deposit at with the company.

Shareholders can rest assured that the company has a compet and loyal staff.

Union Trustee Co. of Australia Ltd.

The following address was given by the Acting Chairman, Mr. T. H. Richardson, to shareholders at the Annual Meeting on y 6:

The Directors' Report and audited statements of account for year ended February 28, 1953, have been sent to shareholders o have had the opportunity of examining them. The further inase in the cost of salaries is the principal feature in the Profit l Loss Account of the year and is reflected in larger contributions the officers' provident fund and in the payment of pay roll tax. e increases in costs were partly offset by slightly greater earns in commissions, rents and interest and the saving consequent on the abolition of federal land tax.

Rates of Commission.

In the report of the Directors, reference was made to the amendnts to the Company's Acts in New South Wales and Queensland, owing the company to amend its scale of charges, with the result t in respect of new estates and trusts the remuneration bears a re equitable relationship to the cost of carrying out its work n the former scale of charges permitted. The report also advised reholders that the Government of Victoria had been informed of pressing need for an amendment of the Trustee Companies Act this State. It is hoped that the provisions relating to the charges trustee companies will be framed in a manner suitable to the atly changed conditions of the present day and that companies not much longer be faced with the impossible task of trying to et current costs within the limit of the scale of charges considered ropriate to the general and commercial conditions existing when original Act was passed 70 years ago. It is only by a re-arrangent in the method of charging for their services in individual tes that companies will be able to recoup the cost of the work ried out.

The justness of the request to Parliament is emphasised when s appreciated that increases in remuneration will apply only to tes and trusts committed to the care of companies after the ndments in the scale of charges have been effected. The administion work in hand must be continued and completed at the uneration based on the scale of charges which has applied in past. As stated in my address last year, this will mean that company will continue to carry out a great amount of its work a cost appreciably more than the remuneration received.

Interest Rates.

The past twelve months has seen a hardening of interest rates. ly in the year advances made by way of loan on mortgage for t terms were considered as favourable to our trusts, but since increase in Commonwealth Loan interest to 4½%, the maximum of 5% does not attract investment of trust moneys on mortgage.

Seasonal Conditions.

Victoria and southern New South Wales experienced an unusuwet winter and spring, but the dry period for the past four ths has not been favourable to dairying and grazing in southern oria particularly. During the past year drought conditions in hern Queensland and other parts of Northern Australia have caused large losses in stock and it will be some years before the herds are built up to the usual numbers. After the long dry spell good rains have now been received in Queensland and northern New South Wales and the greater part of eastern Australia is in good heart.

The wool market has been firm during the 1952/1953 season and the prices realised for the sale of the clip have been most satisfactory.

Trading Conditions.

Manufacturing and trading concerns experienced during 1952 the earlier consequences of the change from the boom, when the general objective had been to acquire property and goods, to what we may regard as nearer to normal conditions. The means of obtaining finance became more restricted and this, with the import controls which were suddenly imposed, had a marked effect on the welfare of many businesses. It must be recognised that the policy which was implemented has proved of substantial benefit to the community as a whole.

It is pleasing that there has been some check in the steep rise in the cost of living. Nevertheless the high costs of production in Australia are very disturbing. For the protection of our economy we require during the next few years wise and thrifty government, a gradual and cumulative correction of the high cost structure linked with a sound and confident outlook by business and financial interests.

Staff.

I wish to express the appreciation of my Board for the work performed by the management and staff of the company at all offices during the past year.

You're money ahead when you own a super-swift, easy, accurate

Burroughs Adding Machine

A Burroughs gives you the answers you need in the simplest, surest, fastest way possible—protects profits—reduces operating costs—saves you money every time you touch the keys! Call the Burroughs man and have him demonstrate bigger results in less time with Burroughs . . . see how it will pay for itself many times over in savings.

* * *

A MODEL EXACTLY SUITED TO YOUR NEEDS. Standard adding and bookkeeping machines. Electrically and hand-operated. Wide and narrow carriages. Capacities from £9,999-19-11½ to £9,999,999,999-19-11.

Burroughs outlasts them all!

For many businessmen, Burroughs is a once-in-a-lifetime investment. 67 years' experience helps Burroughs make the very finest. And the world-famous Burroughs Service Plan keeps your machine always at peak efficiency.

You can count on

Burroughs

Offices throughout Australia, New Zealand and Fiji.

4¾%

for optional term of 7, 15 or 25 years

An amount of £2,600,000 is sought for capital works now being constructed to increase electric power resources. Since these works are essential for national development, subscription of funds on the attractive terms offered merits the earnest consideration of both large and small investors.

STATUS OF COMMISSION
The Commission is Australia's largest electricity authority. Capital assets now approximate £152,000,000. Revenue for last financial year was approximately £21,000,000, and operation of the business continues to show a satisfactory surplus. Expansion of the undertaking can be financed only by loan money.

MAXIMUM INTEREST
The maximum gilt-edged interest rate of £4/15/ per cent will be paid. Interest begins immediately funds are lodged, and will be paid half-yearly during the term selected.

GILT-EDGED SECURITY
Regular payment of interest, and repayment of principal in full at maturity are secured upon the Commission's revenues and guaranteed by the Government of Victoria.

PRICE AND TERM
Inscribed stock or debentures will be issued at par. Investors on application may choose a term of 7, 15 or 25 years. Any amount in multiples of £50 may be invested.

INSTALMENT PAYMENTS
Investments may be made by an initial deposit of one-tenth, and the balance in one amount or three equal instalments by October 15, 1953.

TRUSTEE INVESTMENTS
The loan is an authorised investment for trustees in Victoria, Queensland and Tasmania, and is particularly attractive for non-taxable funds.

FREE OF EXCHANGE
Application money will be accepted and interest will b payable free of exchange throughout Australia.

PROSPECTUS AND APPLICATIONS.

The full prospectus can be obtained from and applications may be lodged with any office of the Commonwealth Bank or The National Bank (including The Queensland National Bank); members of recognised Stock Exchanges; or any of the Commission's offices. The loan will close not later than Tuesday, August 25, 1953.

Underwritten by J. B. Were and Son.

State Electricity Commission of Victoria. Head Office: 22 William Street, Melbourne

New Issues

BLUE SPEC MINING CO. N.L.—Applications close Aug. for 624,000 5/- shares to be issued as fully paid on payent of 2/6 per share; 4-for-5 held July 30; payable 6d. on plication, 2 calls of 1/- (first call due on Sept. 9, 1953); subct to consent of meeting to be held on July 29.

COLONIAL GAS ASSOCIATION LTD.—A new holding mpany, Colonial Gas Holdings Ltd., to be formed to acquire lonial Gas Association Ltd.; books close July 23; basis of quisition:

1. Four 6% cumulative preference in Colonial Gas Holdings for three 8% non-cum. pref.
2. Five 20/- ordinaries in Colonial Gas Holdings for 4 ordinary shares.

THE COMMERCIAL BANK OF AUSTRALIA LTD.—plications close Aug. 7 for 2,105,868 10/- ordinaries at preium of 7/6 per share; 1-for-2 ord. or pref. held July 7; payle 10/- on application (incl. 5/- premium) and a call of 7/6 ncl. 2/6 premium) on Feb. 8, 1954.

DIE CASTERS LTD.—180,000 6% Registered Notes of 20/- par; 1 Note for each 8 ordinary 5/- stock held; 6 years' rrency; Notes will carry an option certificate entitling the lder to convert into four 5/- ordinaries at par in 5 years.

E. T. BROWN LTD.—Applications close Aug. 24 for 35,000 20/- ordinaries; 1-for-3 held July 23; payable 5/- and calls of not more than 5/- at not less than 3 monthly intervals; dividend ranking from 1/7/53 on amount paid up.

HOLEPROOF APPAREL LTD.—Offer by Holeproof Ltd. to allot one 20/- cumulative 5% "C" third preference share in Holeproof Ltd. in exchange for each 5% cumulative preference share held; to be accepted by the holders of not less than nine-tenths in value by Sept. 7.

NORTH KALGURLI (1912) LTD.—Proposed to capitalise reserves sufficient to issue to shareholders one fully paid share for each share held; books close July 17; subject to meeting to be held July 29.

R.V.B. ENGINEERING LTD.—Bonus issue 1-for-10 subject to Capital Issues consent.

SIDNEY COOKE LTD.—150,000 6% registered convertible Notes of 20/- at par repayable Sept. 30, 1959; ordinary and preference shareholders will be given prior right to subscribe to 100,000 Notes; books close Aug. 7; application lists open Aug. 10 and close Aug. 28; payable in full; Notes carry the right to convert into an equal number of ordinary shares at par.

The whole of the issue of 500,000 shares now offered for public subscription has been underwritten and taken firm by the Underwriting Brokers.

OBJECTS OF THE COMPANY:

The objects of the Company are to explore, test and develop gold properties adjacent to the Hill 50 Mine in the Mount Magnet district, Western Australia.

PROPOSALS:

An Agreement has been entered into by Kenneth William Craig as Trustee for the Company, which provides the Company with the right to prospect and develop certain selected properties in the Mount Magnet goldfield.

This Agreement, dated 18th June, 1953, with James Pringle Clark (in whose name the various Leases and Options are held as Nominee for the Boogardie Syndicate) provides for:—

(a) Assignment to the Company of the following Options:
  (i) Purchase Option dated 20/2/1953 from William Cassey to W. L. W. Dray, which has been assigned by Agreement dated 17/6/1953 to J. P. Clark over Lease 1361M (known as Jupiter) expiring 18/3/1954. Purchase price £12,500.
  (ii) Option dated 8/12/1952 from Arthur Bertram Landw Thomas William Sadler and Norman Blackie over L 1457M (known as Saturn) expiring 1/12/1953. Renew to 1/12/1954 on payment of £1,000. Purchase price £8
(b) Option of purchase over Leases Nos. 1461M and 1462M d 20th February, 1953, and 1469M and 1470M dated 13th 1953, all in the name of James Pringle Clark.

Refer to the heading "Consideration" for purchase price det

A copy of Certificate dated 12th June, 1953, issued by the Pri pal Registrar of Mines, Perth, in respect to the above Lea appears in the prospectus.

Exploration will be carried out initially by mapping and logical analysis, and will be followed where warranted by diam drilling. Arrangements will be made with a competent contra to carry out the actual diamond drilling. As a precaution, h ever, sufficient funds are being made available to purchase esse drilling equipment.

Direction of the prospecting operations will be in the ha of Dr. M. D. Garretty. Mr. W. E. Munro (recently Undergro Manager of the Lake View and Star Mine, W.A.), will watch Company's interests in Western Australia in his capacity as L Director.

It is estimated that the funds in hand will be adequate carry out all the desired investigations and complete the appr mately 10,000 feet of drilling estimated to be required.

PROSPECTS:

The properties already secured under option adjoin the Hil leases, and are considered to be attractive diamond drilling p pects.

Attention is drawn to the accompanying abridgements f Reports by Dr. Garretty and Mr. Morton Webber. It is consid quite likely that formations exist in the areas to be prospe comparable to the important Hill 50 ore bodies.

It is the intention of the Company to form an operating c pany or companies to work mineral leases where warranted. such cases, this Company's interests will be transferred to operating companies and substantial benefits should accrue shareholders in this Company.

ABRIDGED REPORTS:

(Copies of the complete Reports may be inspected at the gistered Office of the Company or at the offices of the Underwrit Brokers).

Report dated May 22, 1953, by Dr. M. D. Garretty, D.Sc., M.I.M. M.A.I.M.E., M.Aust.I.M.M., Consulting Mining Geologist, Melbou (Prepared for inclusion in the Prospectus).

The purpose of my visit to Boogardie on the Mount Mag goldfield was to make a brief examination of the leases held James Pringle Clark on behalf of the Boogardie Syndicate, adj ing the holdings of the Hill 50 Mine. It was desired to deter whether the leases were such as might worthily be tested in hope of finding substantial orebodies capable of being worked a profit.

The area has attracted interest recently because of the not high grade ore being met within the Hill 50 Mine. Some days spent on the field examination, and in order to appraise the Booga Syndicate leases, adequate attention was given to the environm A brief study was made of the geological conditions governing occurrence over the whole of the field, and the courtesy of the 50 Gold Mine N.L. in affording access to their underground worki was gratefully availed of.

The Mount Magnet field has been a substantial producer gold in the past. The Hill 50 Mine itself, to June 30th, 1952, duced 641,172 tons containing 161,968 ounces of gold, an averag just over 5.0 dwts., per ton. However, there have been also a few other producers with substantial tonnage reports on the fi Most of the latter ore came from open cuts. The Hill 50 M which is currently producing about 7,000 tons of ore per mo from workings above the 820 ft. level is much the deepest mine the field.

The Boogardie Syndicate has acquired a number of leases applications for leases in its own right. These are numbered 146 1462M, 1469M and 1470M. In addition options have been obtai by the Syndicate over the Jupiter lease 1361M, and the Sat lease 1457M. The leases are all at Boogardie, and adjoin th held by the Hill 50 Gold Mine N.L. The Syndicate leases h several features which commend them for testing in the hope disclosing substantial ore of payable grade.

Two diamond drill holes were put down in 1935 and results lied to the Mines Department by the interested party. There vidence in them of a succession of jaspilite bars, with appreciable content. It should also be recognised that the drill holes were placed in what we would regard as the best positions to get ore. first drill hole was aimed directly under the open cut, but at epth of 500 ft. The core intersection from 521 ft. to 540 ft. aging 2.5 dwts., over a true width of 13 ft., is in just about right position to represent the jaspilite beds of the open cut nward on their dip (the rich intersection between 285 ft. and ft. represents an outcrop further to the north-east). Therefore, e the pitch of ore is almost surely not vertical—my preliminary rvation suggests a pitch to the south—the result of 2.57 dwts., a true width of 13 ft. is encouraging. The criticism of this is not the fact that it was aimed at a depth of 500 ft., but implied assumption that the ore would pitch down to it vertically the open cut.

I consider that the Boogardie Syndicate's leases, and the Saturn e in particular, merit sound prospecting by diamond drilling. ever, it must be preceded by adequate and competent geological ping and study to lay-out the testing programme.

The general scheme of drilling should be such that the inter- ation of results from earlier holes is available to guide later s. Drill holes should be planned on the now well-known prin- s of "maximum and minimum limits" and "overlapping areas robability."

In general, my views of drilling are similar to those expressed Mr. Morton Webber in his report. Furthermore, I agree with that a substantial footage of drilling should be contemplated. least 10,000 ft. of drilling should be considered.

If the procedure outlined above is carried out, there is, in view, a good prospect of obtaining sufficient indicated ore to ant development and mining.

Report dated February 9, 1953, by Mr. Morton Webber, M.I.ME., ulting Mine Valuer, Perth, W.A. (Prepared for inclusion in the pectus).

The Boogardie Syndicate either owns or controls by option mining leases of irregular size adjoining the southern extremity ne leases of the Hill 50 Mine situated at Boogardie in the nt Magnet district of the Murchison goldfield.

The object of the undersigned's examinations of the Syndicate s was to form an opinion as to the prospect of discovering -seated profitable ore similar to the valuable ore bodies of Hill 50 Mine. With the object of making a competent report, undersigned was afforded the courtesy of a study of the Hill 50 ings from the surface to the 820 ft. level, the present bottom of the Mine. His object in requesting this courtesy was to ve the change in rock structure and ore change in the geologi- l column of 820 ft.; the intention being to endeavour to apply by gy this evidence to the leases under examination. The work- in the Syndicate leases are shallow and furnish only superficial nce.

In the experience of the undersigned, he has found that Mines in the same mining field have usually similar characteristics in respect to depth and length of profitable ore, provided the rock structure is similar and the period of mineral deposition is probably coincident.

The foregoing is presented to explain the importance of the study of the geological column of the Hill 50 Mine. In the opinion of the undersigned, the rock structure of the Hill 50 Mine and the leases of the Syndicate are similar and it is also his opinion that the period of ore deposition is probably coincident. The area controlled by the Syndicate lends itself to diamond drilling from the surface by using depressed holes. A drilling programme should be of sufficient scope to give the enterprise a fair chance. The surface evidence indicates there is about 2,500 ft. of ore channel (including evidence of parallel series) that could justify drilling. A drilling budget should be sufficient to contemplate a minimum of 8,000 ft. of drilling, excluding the cost of competent supervision due to the essentially elastic nature of the programme.

By applied logic as outlined in the body of this report, namely, as the leases of the Boogardie Syndicate are similar in surface rock structure to the Hill 50 Mine and it is also the opinion of the undersigned that the ore deposition is of probably coincident period, and as the surface operations of the "old timers" are as impressive on the Syndicate ground as the early workings of the Hill 50 Mine, the persistence of profitable ore with depth is a reasonable expectation, particularly in view of the adjacency of the enterprises.

CONSIDERATION:

Leases and Options as already detailed and held by Mr. J. P. Clark on behalf of the Boogardie Syndicate will be assigned or optioned to the Company for the sum of £1,500 in cash, plus the right, should any option over lease or leases be exercised, to require Hill 50 Extended No Liability to issue as fully paid to the Syndicate or its nominees 100,000 5/- shares at present held in reserve.

STOCK EXCHANGE LISTING:

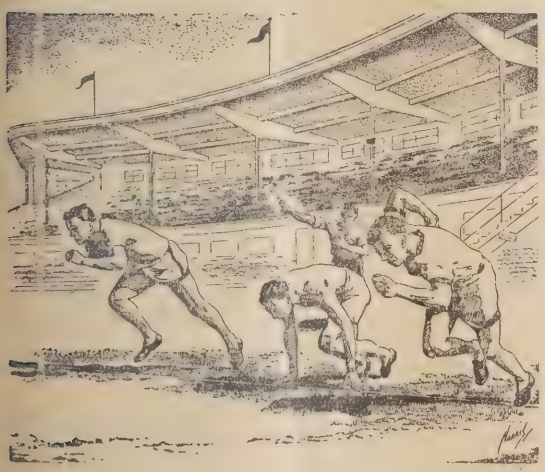
Application will be made as soon as practicable after allotment for the official quotation of the Company's shares on the Stock Exchanges of Melbourne, Perth and Adelaide.

UNDERWRITING AND BROKERAGE:

The whole of the issue has been underwritten and taken firm by Messrs. Leonard G. May and Saw, Reid & Cambridge, Members of The Stock Exchanges of Melbourne and Perth respectively, for a commission (including brokerage) of 1½d. per share.

ALLOTMENT:

The Directors reserve the right to allot such number of the shares as they deem fit up to the number applied for by each applicant, and also to reject any application.



Make Sure of a Winning Start

In any race a good start helps greatly to achieve success. Particularly is this true of that greatest of all events — the "race for success" in life. Success in life, as everyone knows, commences with the careful handling of money.

If you want to get ahead—to get out of the rut—to enjoy a greater measure of happiness — and to look forward to a carefree independence, pay into your savings account regularly. It isn't how much but how often that counts with savings.

THE STATE ELECTRICITY COMMISSION OF QUEENSLAND

For Information Only

QUEENSLAND
State
ELECTRICITY

Loan £4/15

10 OR 25 YEARS TERM *PER CENT INTEREST*

In every part of the Commonwealth, the Queensland State Electricity Loan receives the special recognition it has earned. As a high-yielding, completely safe investment, the support it enjoys is outstanding. In the vigorous, realistic purpose which it serves — the steady expansion of electric power resources throughout Queensland — it has proved itself of major significance to all whose interests are on a national scale.

FEATURES OF THE LOAN ARE:

MORE THAN DOUBLE BANK INTEREST, PAID HALF-YEARLY
YOU CAN INVEST £50 OR ANY MULTIPLE OF £50
REPAYMENT IN FULL AT MATURITY IS GUARANTEED BY THE QUEENSLAND GOVERNMENT
YOU CAN INVEST FOR TEN OR TWENTY-FIVE YEARS
Subscriptions are free of Exchange

APPLY  NOW TO

. . . any branch of the Commonwealth Bank, direct to the office of the Queensland State Electricity Commission in Brisbane, or to any member of the Stock Exchange.

The Loan is Underwritten by
J. B. WERE & SON, MELBOURNE

LOAN CLOSES
JULY 18th, 1953

Company Meeting

COLONIAL MUTUAL'S GOOD YEAR

Another year of steady progress was reported to members of The Colonial Mutual Life Assurance Society Ltd., by Mr. G. Healy, Chairman, at the Annual Meeting in Melbourne on May 27.

"I feel justified," he said, "in drawing special attention to some of the fine results of the Society's work during 1952.

		Increase on 1951
New business in ordinary and industrial departments	£55,523,459	£2,098,514
Payments to policyholders in ordinary and industrial departments	5,162,121	702,534
Income in the ordinary department	12,619,917	1,020,049
Income in the industrial department	2,344,723	140,276
Income in the accident department	439,057	57,538
Funds in all departments	76,900,727	7,001,765
Gross interest rate on assurance funds	4/6/11%	2/7%
Net rate after allowing for taxation	3/19/10%	—

"The increase in new business by the substantial amount of £2,098,514 upon the very large total for the year 1951 is a result which reflects great credit upon all those responsible for this aspect of our efforts.

"This is especially so since the year 1952 did not show a repetition of the exceptional economic conditions of the immediately preceding years.

PAYMENTS TO POLICYHOLDERS

"As I have already mentioned, there is an increase of £702,534 in this item as compared with the previous year. This is an important indication of the Society's rapid growth, since the mortality rate amongst our policyholders actually was lower than that of the previous year.

"A low mortality rate, of course, is one of the factors which enables the Society to maintain the return to policyholders by way of bonuses, and this has been done during a period when the cost of commodities and services used by the Society has increased enormously.

"From the inception of the Society, £72,746,794 has been paid to policyholders.

FUNDS

"The increase of £7,001,765 in our funds is very satisfactory, and is consistent with our rapid growth. It represents the additional amount which must be held to meet the payments that eventually will be made under the Society's policies.

Interest Rates

"Earlier I mentioned a rise of 2/7% in the gross interest rate. Thus in the past three years there has been a rise in the rate, amounting in total to 6/11%. The net interest rate after allowing for taxation shows a smaller rise during the three-year period, but, nevertheless, shows an increase of 5/8%.

BONUSES MAINTAINED

"The report of the actuary shows that the total surplus in the three departments is £2,039,334, of which the record sum of £1,796,451 is being distributed to provide increased policy benefits by way of bonuses.

"I have pleasure in informing you that the surplus from the various sources has remained buoyant, despite the increased operating costs, which are particularly a problem in the industrial department.

"We have therefore been able not only to maintain last year's satisfactory rates of bonus, but also to continue the process of strengthening our reserves by a sum which is reasonable in relation to the amount of surplus distributed.

SPAN OF LIFE

"The average length of life has been greatly increased du the last 50 years. Many things have played a part in brin this about, but probably the most important factor is that, on one, the infectious diseases have been brought under control science and medical research.

"This has given rise to significant changes in the cause death, and today about 50% of all deaths among our policyhol arise from various forms of disease of the heart and arteries. is usual to think of heart disease as a disease of old age, actually it is a disease which kills and disables many children thousands of the young and middle-aged.

"During the last year your Directors decided to join in establishment and support of a research fund to be known 'The Life Assurance Medical Research Fund of Australia and Zealand.' This fund initially will devote its resources to the s of heart disease, and we feel that in taking this step an impor contribution will be made towards the solution of the prob presented by this form of disease.

"Medical science may never wipe out heart disease among aged, but it should eventually become possible to prevent it cau the deaths of so many young men and women.

INFLATION

"In the past year we have all been relieved to observe gradual 'tapering off' of rising prices, and we hope that the mainder of this year may see further progress towards stabili

"Now is the time, I consider, to say something about a gro attitude that once the price level appears to have reached reason stability, all will be well, and that we will need to think no of the problems of inflation.

"Nothing, of course, could be further from the truth. essence, inflation occurs when the supply of goods and service exceeded by the money available for their purchase. This situa can arise from a variety of causes, and the highest degree technical knowledge, political skill, and, in addition, restraint on part of both governments and the people, are required if equilib is to be kept.

"We have seen quite recently how even a circumstance favourable in itself can play a part in causing a rapid rise in pr I refer to the flood of purchasing power released in Australia the very high prices obtained for our exports in 1951. Ther surely a lesson to be learned from this experience.

"We, as directors of a great mutual life assurance soc which draws its policyholders from all sections of the commu are keenly concerned to see that nothing is done which will r in the destruction of the savings of the people.

"We say emphatically that any programme, even if it directed towards the most desirable social end, defeats its purpose if its operation results in a rapidly rising level of price

"Repeated bouts of rapid inflation mean, finally, loss and tress to most of our people, and will defeat or render futile efforts towards such essential objectives as an increasing stan of living, social security, and a high level of employment.

"These matters are only partly problems for governments. are also our individual problems, and we should all seek an intelli understanding of them.

"If we should fail and inflation run riot, it will not be savings which are in danger, but the whole of our democratic stitutions."

Godfrey Phillips Holdings Ltd.

eg. Office: Drewery Place, Lonsdale St., Melb. **'Phone:** FB 1121. **Directors:** Col. F. H. Wright, O.B.E., V.D. (Chairman), C. M. Paynter (Manag. Director), E. J. Baster, P. A. G. Phillips, R. J. Cocks, R. H. S. Waley. **Auditors:** Flack & Flack.

2nd Year ended December 31, 1952. Meeting May 19, 1953.

Following the public issue of 6% cumulative preference ıares in September, 1952, profit was £142,405, representing ver five times the preference dividend.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £2/9/5; 5/- ordinary shares are not listed.

In addressing shareholders at the Second Annual Meeting on ıy 19, the Chairman, Col. F. H. Wright, said:

I would like to welcome all our shareholders on this occasion the first Ordinary General Meeting of Godfrey Phillips Holdings mited as a public company.

If you would kindly turn to the Consolidated Balance Sheet ere are a few points on which I would like to comment.

On the liabilities side there is an amount of £1,007,007 due to sociated companies. The greater part of this sum, which has en built up over a number of years, represents long term accomdation given by your parent company in London, towards financig the steady increase in turnover of your subsidiary company.

On the asset side of the Balance Sheet, I would direct your tention to the value of plant, machinery, furniture and motor hicles, which stands at £246,744. This is an increase of £63,645 mpared with the previous year, necessitated by increased proction and the continued provision of modern equipment in your bsidiary company's factories thereby ensuring economic productn and the maintenance of a high standard of quality.

Turning to the Consolidated Profit and Loss Account, the pro- for the year after charging taxation amounts to £146,900. The licy of your Directors is to conserve the finances of your comny and its subsidiary against future expansion, and of this sum ,750 has been distributed by way of dividends, leaving £88,150 the year's profits to be carried forward.

Sydney Warehouse.

I am pleased to be able to tell you that warehouse premises ve been acquired in Sydney and a new distribution unit comnced operation on May 1 of this year. This gives your subsiary direct representation in New South Wales, and becomes a luable link in the chain of distribution. The Company already s warehouses established in Victoria, South Australia and Tasnia, and is represented by agents in Queensland and Western stralia.

Melbourne Factory.

A new site has been acquired in Melbourne by your subsidiary mpany, on which it is proposed to erect a new and modern facty to take care of the expanding production needs of the comny. As would be expected with a project of this size, it will e some little time to bring into being, but the whole project is w being actively examined.

It is always difficult to forecast the future, but there is an ication that Government policies lean towards placing Aus- lian manufacturers in a position to contemplate increased proction instead of relying for a substantial portion of the coun- 's needs on the import of tobacco and cigarettes in manufactured form. Such a policy provides substantial contribution to the maintenance of a more favourable overseas trade balance.

Similarly, increased local manufacture provides the leaf growing industry of Australia with a wider market for its production. Your subsidiary company retains field officers and leaf-growing experts who are co-operating with Government agencies and growers with a view to ensuring increased production of good quality leaf, which is essential for the production by us of quality goods.

Price Control.

In the early part of 1952 your company suffered hardship due to delayed decisions by the Price Control authorities, and while this unsatisfactory state of affairs obtains, a degree of uncertainty is always present. Your company believes that, as has happened with many other commodities, de-control would create more flexibility for manufacturers without necessarily incurring higher prices to the consumer.

Let no one call us a luxury trade, for today we provide a very necessary service demanded by all sections of the community. Shareholders and our consuming public may be definitely assured that it is our constant aim in Australia to maintain the very high quality of Godfrey Phillips products, and to guard zealously the proud name of our brands established by our parent and allied companies, and so honourably earned by over a century of trading.

Staff.

Before closing my first report to you as Chairman since we became a public company, I should like to express my appreciation of the excellent work the staff and employees of your company and its subsidiary have performed during the year, and the fine spirit they have displayed in so doing. I should also like to pay a tribute to my colleagues on the Board for the ready cooperation I have received from them at all times.

I have not yet had the privilege of visiting our home factories in England, but I hope to in the near future when my own business activities leave me free to do so. I have, however, from time to time, read with very great interest our Home Magazine, and I am particularly impressed with the very evident friendly, and indeed, family spirit that seems to pervade the whole of their activities. We are, of course, a much younger and smaller organisation in Australia, but we are proud to say that already a very happy relationship exists between the Management and the employees (many of whom are shareholders), and it shall be the constant endeavour of your Directors to establish conditions out here for the employees on the Home pattern, so that throughout our organisation their everyday working lives shall be to them a pleasure.

Howard Smith Limited

Investors in Shipping, Coal Mining and Sugar Businesses, &c.
Head Office: 269 George St., Sydney. **Reg. Office:** 522 Collins St., Melb. **'Phone:** MU 7311. **Directors:** Austin Howard-Smith (Chairman), Sir William Lennon Raws, K.B., C.B.E., Col. Alfred Spain, J. D. Fell (Deputy Chairman), N. L. Cowper. **Auditors:** Flack & Flack.

38th Year ended December 31, 1952. Meeting April 29, 1953.

Profit again rose sharply by £122,000 to £379,260, and dividend was raised to 7%, absorbing £140,000 and leaving £224,000 for reserve.

UNION TRUSTEE

Protects and Conserves

Your Assets

For the security of your dependants, the management and protection of your assets is just as important *after* your lifetime as it is now. Administration of Estates is a specialised duty that Union Trustee has faithfully performed for over 67 years. It is significant that an increasing number of people in all walks of life are appointing the Company as Executor or Trustee.

Charges are exceedingly moderate; are, in fact, limited by law. Continuity of service is assured at all times.

Call for a personal interview, or write for a copy of the free booklet — "Important Facts concerning Wills, Executors, Trustees." No charge—no obligation.

The passenger ships "Wanganella" and "Westralia" were e patronised, but cargoes were limited by the necessity to ntain schedules. Traffic volume fell off in the latter part of year.

Under construction are a 4,500 tons general cargo carrier a tug for Melbourne. The cost of new tonnage shows no gs of falling, and this will prevent lower freight charges.

Apart from its shipping interests, the company has two llery subsidiaries (Hebburn Ltd. and Metropolitan Coal Co. Ltd.), also substantial funds invested in outside companies - & A. Brown & Abermain Seaham Collieries Ltd.; Tas- ian Steamers Pty. Ltd. (50% interest); Australian National ays Pty. Ltd. (20% interest); Amalgamated Wireless Asia) Ltd.; and Melbourne Steamship Co. Ltd.

Due to economic conditions, some of the factories of the subsidiary companies worked on a reduced output during the latter part of the financial year, but there have since been indications of improvement.

The business, which was founded in 1888, operates factories in New South Wales, Queensland, Western Australia, South Australia and New Zealand, manufacturing "Fibrolite" asbestos cement sheets, guttering, high pressure water pipes and conduit for electrical cables.

The New South Wales factory also manufactures "Tilux" asbestos cement sheets, frictional linings for braking purposes and electrical insulation board; the Brisbane factory also manufactures terra cotta roofing tiles.

The company has been listed on the Sydney Exchange for some years, and was first listed in Melbourne in 1953.

Net tangible asset backing (book values in consolidated balance-sheet)—£2/10/4 a £1 share.

At latest price of 41/6 the shares return £3/17/1 per cent.

In his address to shareholders at the Annual Meeting on June 25, the Chairman, Mr. G. R. Sutton, said—

The year under review has been a difficult one, in view of the fact that financial restrictions imposed early in 1952, together with the buyer resistance that followed, led to a falling off of the number of building permits issued to private persons and, as we all know, the various State Governments curtailed their home building schemes and practically stopped completely water reticulation installations in various parts of the Commonwealth, which already had the endorsement of State Governments. Both these are essential to the Nation and affect your company; we are hopeful it will not be long before these conditions alter and we are back to normal.

Balance Sheet.

Before asking you to adopt the balance sheet now presented, I want to make a few comments on the figures of the holding company as compared with March, 1952, and then refer to the consolidated accounts to complete the picture.

Referring to the figures, you will find there is virtually no change on the asset side, which mainly consist of investments—shares in our subsidiaries—and these have an asset value greatly in excess of that shown in the accounts.

Coming to the liabilities, you will notice an increase in the general reserve account of £92,000, which is a transfer from the appropriation account, and off-sets the total dividend paid for the year from the special reserve account.

The appropriation account carried forward has increased by £31,510 to the figure of £145,334, and this is explained in the accounts now submitted. This may vary from year to year according to the dividends received from the subsidiaries.

Revenue.

The revenue of the holding company totalled £129,010, or an increase over last year of £11,894. You will be asked to confirm the interim dividend of 4%—£46,000 paid in November last, and to approve of a final dividend of 4% amounting to £46,000, making a total of 8% for the year, this being the same as last year. Both dividends, in all £92,000, are paid out of the tax paid reserves, and to reinstate the reserves we propose transferring to the general reserve account £92,000 out of the profits for the year.

Consolidated Accounts.

Turning to the consolidated accounts: These cover manufacturing and trading in all the Australian States and New Zealand; the combined profits disclose an increase of £93,432 as compared with last year, and in view of the conditions which prevailed during the year is considered satisfactory. Our total sales for the year showed an increase over any previous year, the general turnover being good for the first six months but gradually fell away, and I am pleased to say that since closing the accounts there seems to be a general improvement, although the factories are far working at full capacity.

Ordinary depreciation £169,867 has been allowed for in but not special initial depreciation of 40% on new plant, to w I will refer later. However, all assets have been fully maint and are in good order and condition.

The payment to the employees' fund amounted to £31,014, was brought into the accounts before arriving at the net pr Through this payment the Australian Capital Fund, invested controlled by trustees, now amounts to £172,089, and the valu the unit has been increased to £26/15/10 each, in which 670 empl participate, and in the New Zealand Fund the capital value is £7,800 and the unit £26/7/1 each, with 41 employees participati

Taxation has been provided for on the present rates and s meet our requirements to March 31, 1953. This high figure dicates what the silent partner, viz: The Taxation Commissi receives for no effort on his part. The net profit before tax is £654,733, of which the silent partner receives £360,898—the s holders £92,000, and the balance £201,835 left to modernise develop the business, which is insufficient in view of replace capital costs today.

Comparing the balance sheet with last year, the general re shows an increase of £98,200, being the transfer from the pro loss appropriation account, being £92,000 dividend paid, as previ mentioned, and £6,200 from the accumulated profits of a subsi

The "Asbestos House" Sinking Fund has increased by £ being the usual annual amount set aside.

On the assets side we find the fixed assets, after writin depreciation, have been added to by £200,586, caused by addi to plant and buildings restricted to essentials.

Investments increased by £1,775, mainly brought about paying final calls on shares previously taken up.

Stocks on hand show a substantial increase of £432,897. fall in turnover has partly caused this, but the main reason i increased cost of raw materials and the finished stocks, a which have been taken into the accounts at cost or market whichever is the lower.

Our combined sundry debtors show a reduction of £21,400, can be put down to the slight fall in turnover towards the of the company's year.

Coming to the liabilities side: Our current liabilities sh fairly large increase of £408,612, due mainly to increase in overdraft (£332,971) required for stocks, together with tax requirements (increase £146,720), whilst our ordinary trade cre have been reduced by £68,622, an indication that our raw ma stocks are not unduly high.

The intangible assets remain at the same figure.

The Senate Elections are over and, fortunately for all result is such as will not cause the stalemate which was may happen.

Wages.

ome of the difficulties confronting Australia are world wide, but reatest is the continual increase in the basic wage. The re- 3/- increase must increase the cost of all local production. increased cost of living resulting therefrom will under our nt system automatically lead to a further increase in wages. ased wages do not lead to increased production but only in- ed costs. This has been going on for years, and courageous probably unpopular action is required to halt this main reason nflation and ultimately the further depreciation of our currency nally as well as within the Commonwealth.

he recent six new awards for rural workers providing for num wages of £12/16/0 to £13/11/0 for 44 hours, plus overtime, pay, long service leave and two weeks' annual holiday, must ase the tempo of currency depreciation and may prove "the straw."

Taxation.

Heavy taxation is curtailing industry. It is up to the Govern- to help by giving some incentive to all by reducing the rates xation. In addition, such burdens as pay roll tax—this snow- with basic wage adjustments—must contribute to higher prices higher wages. It is undoubtedly a bad tax and is not equitably d, when one considers you may make a profit or loss in busi- in fact you may even be struggling for existence, but still have to pay the tax. Another feature is that Commonwealth ess and undertakings are exempt from payment, thus creating r discrimination. The Federal Treasurer in his next budget i be well advised to abandon it.

The withdrawal of the initial depreciation allowance was a tragedy to most businesses whose aims are to modernise plant by mechanisation, thus enabling them to compete with overseas manufacturers. Modern science and equipment are advancing so rapidly that heavy allowances for depreciation are necessary to replace old plant over short periods. If this is not forthcoming, then there is no encouragement to manufacturers, who may be prone to say "let the old plant carry on." Many sections of industry in U.S.A. are allowed a complete write off of new plant in 5 years, the same as at present applies to Australian rural industries. Mr. Butler in his last British Budget realised the need for this and today manufacturers in England have an initial depreciation allowance of 20% on plant and machinery and 10% on industrial buildings. This certainly is an inducement to manufacturers who desire the development of their industry, and your Board is of the opinion that the initial depreciation allowance should be reinstated as an incentive to assist the modernisation of plants.

Conclusion.

Once again I want to express the appreciation of the Board to all members of the Company and the Subsidiaries who so ably helped to build up our organisation and for their untiring efforts in the year just closed. In this I am sure all shareholders will concur.

This concludes my remarks with the exception of a personal matter. After having held the position as your Chairman since the death of our first Chairman, Mr. Andrew Reid in January, 1939, I propose after this meeting to relinquish the Chairmanship, but remain on the Board as an ordinary Director.

We two are clubmates....

. . . have been for years. Last Saturday during our game the conversation turned to family matters . . . the provision for, and protection of, their interests in the future. Fred mentioned he was revising his will and intended appointing me his executor . . .

I told him I appreciated his trust because a suggestion like that—well . . .

that's more than friendship.....

but, as I pointed out to him, his trust *could* be misplaced by such an action. Not because of any fault of mine, but personal circumstances at the time, pressure of business or ill-health could prevent me giving full time to his trust. I suggested his family interests would be better served by appointing NATIONAL TRUSTEES to administer his estate . . .

National Trustees is an organisation of specialists experienced in all phases of efficient administration of family business and estate matters . . . an organisation equipped to carry out your trusts at all times in the manner you have planned and in the best interests of your beneficiaries. Free literature explaining the comprehensive service of National Trustees is readily available on request.

*"B" shares issued for employees. Entitled to three-quarters of ordinary dividend with a maximum of 6%.

†Include profit on sale of assets (1951, £100,932; 1952, £5,321; 1953, £5,555).

The company owns an old-established business with Australia-wide connections as importer, manufacturer and distributor of a wide range of grocery lines. In recent years it has been interested in the decentralised rice milling industry, but this section was adversely affected this year owing to a smaller allocation of supplies.

A new packaging plant for the Melbourne factory is expected to operate about the middle of this year to handle the output of the new milling plant.

As prices are now steadier, stocks were reduced during the year by £135,961 and book debts were lower by £60,000.

Net tangible asset backing (book values)—Pref., £7; each £1 of "B" and ordinary capital is covered by £3/4/4 of net tangible assets. In a winding-up, ordinaries would r £3/11/8 each, as the "B" shares (unlisted) rank pari with ordinaries for return of capital, but do not particip surplus assets.

In his address to shareholders at the Annual Meeting on June 19, the Chairman, Mr. H. W. Buckley, reported turnover almost equal to last year's record. His address reads:

The company suffered a grievous loss in the death of its Chairman, Sir Harry Lawson, K.C.M.G., on June 12, 1952, and a tribute was paid to his memory at our last annual general meeting. Shortly after that meeting the company suffered a further loss in the resignation of Mr. W. A. Leitch on August 15, 1952, and rapidly failing health resulted in his death on Septemb 1952.

William Angus Leitch joined this Board on March 2, 193 for more than fifteen years he served this company as a Di during several of which he was Deputy Chairman. His wise sel and devotion to the company's interests contributed su tially to its success over these years, while his sterling pe qualities made for harmonious working and endeared him all. We feel a deep sense of personal loss.

Sir Norman Martin joined the Board on June 30, 1952, filling e vacancy caused by the death of Sir Harry Lawson. On August 1952, Mr. Richard Warwick Nevile was appointed to fill the cancy caused by the resignation of Mr. Leitch. On February 16, 3, your Board was further strengthened by the addition of an- er Director in the person of Sir Leslie McConnan. I feel that e application by these gentlemen of their wide knowledge and perience to the problems constantly confronting us will prove of eat advantage to the company.

With the additional Board member the Directors' fees become 450 per annum, well within the fee of £4,000 last fixed by the areholders in 1920.

Profits.

You have before you the Directors' Annual Report and the lance sheet and profit and loss account, which show that the st year's trading has produced a reasonably satisfactory result, e net profit, after writing off £31,587 depreciation and £3,770 intenance suspense and providing for taxation, being £36,407. addition a capital profit of £5,555 was made on the sale of fixed sets.

Your Directors recommend a final dividend on ordinary shares 4%, making a total of 8% for the year, and a final dividend of on the "B" shares, a total of 6% for the year. Preference idend of 7% for the year has already been paid.

The Board has transferred the capital profit of £5,555 to re- ves, and has also appropriated out of the year's profit a re- ve of £4,000, which has been related generally to the company's estments. After providing for the dividends and reserve ap- priations, there is a balance of current profit of £307 to be led to the sum, £9,441, brought forward in profit and loss account m the previous year, making a total to carry forward of £9,748.

Trading Conditions.

At the last Annual General Meeting it was reported that heavy sumer resistance was being met during the opening months of financial year and, further, that the very poor rice crop in 2 would adversely affect our operations during the year ended rch 31, 1953. This proved to be so, for the company received s than half the quantity of rice obtained in the previous year. the other hand, the liabilities in respect of rice were also less, l the greater credit carried into 1952/3 in this connection com- sated somewhat for the smaller intake of rice.

Import restrictions further reduced the volume of commodi- s processed and sold by this company, but despite this loss of very considerable amount of turnover, the production of other es was greatly expanded and the company's aggregate turnover s almost equal to the all-time record achieved during the year led March, 1952.

In spite of a close pursuit of added efficiency, costs rose further ing the year. The company is particularly affected by increases interstate freight rates. In many instances, it has been im- sible to obtain price increases sufficient to offset the rising costs. is is due sometimes to price control and the inevitable lag in nt of increased prices, and sometimes to competition.

Competition in this industry is particularly keen and trading rgins very narrow. The efforts of your management are con- ually directed towards maintaining and improving the internal rating efficiency to ensure that the profit margin between fixed ling prices and rising production costs is maintained.

Balance Sheet.

I turn now to the main features of the Balance Sheet.

The value of freeholds increased by £43,128, due to expendi- e on the further building extensions, while the machinery, plant l equipment item increased by £3,682, represented by plant ex- diture in excess of depreciation written off.

Difficulties are still to be overcome in connection with the l installation of the company's very modern packaging plant the Melbourne factory. It was expected that this would be in ration during the year under review, but its benefits will not felt until the middle of the current year, when we should have operation a packaging plant capable of efficiently handling the ds produced by our new milling plant.

Our investments have remained unchanged except for additional scriptions for shares in rice companies.

Having regard to the steadying of the rapid post-war infla- n, your Board considered it prudent to substantially reduce the ks carried, the amount of decrease being £135,961. Book debts, ich are in good order, were also reduced by £60,445. These re- tions are chiefly responsible for the drop of £160,996 in the k overdraft.

Reserves, apart from that identified with investments, now stand £686,566, the increase of £5,555 compared with last year's figure ing the capital profit already mentioned.

Personnel.

You will recollect that last year I reported that the General nager had resigned his position and taken an appointment over- s. Consequent upon that happening, Mr. K. S. Foster, formerly nager of the company's Melbourne branch, was appointed neral Manager of the company as from July 1, 1952. Mr. W. L. tts, of the Melbourne branch, was appointed Manager of that nch, and, at the end of September, 1952, Mr. C. G. Lush, Man- r of the Company's Brisbane branch, retired and was succeeded Mr. R. C. Harper.

With these changes and the reorganisation which naturally ows, Mr. Foster, our Secretary, Mr. Villiers, and all senior ers have worked under great pressure throughout the year, and tts felt the fruits of their labours are beginning to show.

The Directors deeply appreciate the splendid effort which has n put forward, and have pleasure in recording their warm nks to the General Manager, Merchandise Manager, Secretary, nch Managers and all other senior executives and their staffs oughout Australia for their loyal service throughout the year.

Swan Brewery Co. Ltd.

Reg. Office: 60 Market St., Melb. **'Phone:** MB 1925. **Other Share Register:** Perth. **Directors:** Geoffrey Cohen (Chairman and Manag. Director), S. A. Clive King, D. H. McDonald, Edward Cohen. **Auditors:** R. L. V. Ross; J. J. Woodward.

Year ended October 14, 1952. Meeting December 17, 1952.

Although revenue was higher, increased expenses caused profit to drop by £42,000 to £176,582. Dividend was reduced from 8.3% to 7.5%.

Robur Tea Company Limited

Reg. Office: 28 Clarendon St., Sth. Melb. **'Phone:** MX 2185. **Directors:** W. M. Fowler (Chairman), B. S. Kiernan (Manag. Director), F. G. L. Harding, R. Ramsay, E. Walter, D. M. Fowler. **Auditors:** Flack & Flack.

25th Year ended March 31, 1953. Meeting June 26, 1953.

Trading in tea resulted in a small profit, as opposed to last year's loss. Output of other lines was expanded, and these were the main source of profits, which totalled £20,214.

In his address to shareholders at the Annual Meeting on June 26, the Acting Chairman, Mr. R. Ramsay, said—

The accounts presented reflect a considerably improved result on that achieved for the previous year. To some extent, this has been due to the conversion of a loss on tea operations to a relatively small profit and to development and expansion of trade and profits in lines other than tea.

The result for the year enables—for the first time in two years—a modest dividend of 5% to be recommended on the ordinary issue of the company.

The last relief granted on tea trading operations was in July, 1952, since when costs have further increased, and in addition, due to the increased price of 8d. per lb. on tea, made by the Tea Importation Board on June 8 last, substantially increased working capital is now required to finance tea operations to the detrim of our trading in other spheres.

I cannot too strongly urge the necessity for tea margin justments to be made periodically in order to offset the ever creasing costs which are taking place. It is distinctly unfair t this merchandising activity should have to bear cost lags for peri of twelve months and over.

The profits made in marketing other lines have assisted c siderably in the result achieved, and the Board will persist in th policy of expanding these activities in so far as finance conside tions permit.

The wholly-owned subsidiary company, The Oriental Tea Co pany Limited, has shown a small profit for the year, which stated in the Directors' Report—has not been incorporated in accounts of your company.

Rocklea Spinning Mills Ltd.

Reg. Office: 1 Bent St., Sydney, N.S.W. **Directors:** A. R. Jackson (Chairman), A. E. Axon (Deputy Chairman), C. Pevny, W. H. Bentley, A. Whiteley, Mrs. E. Hattersley, W. Young. **Auditors:** J. L. Rawlings, Bolton & Co.

5th Year ended June 30, 1952. Meeting December 15, 1952.

The conditions leading to last year's loss of £8,843 were accentuated this year, and a further loss of £48,573 was sustained, bringing the total of establishment account and profit and loss deficiency to £80,831, representing 52% of ordinary capital.

	1952.	1951.	1950.	1949.
Trading loss	**£1,324**	—	—	—

At its freehold factory in North Essendon, the company has added a hangar which was transferred from a leasehold site at the aerodrome. The company manufactures structural panels in steel and wood, and housing units, commercial motor bodies and light engineering components for the Air Force, the Navy and the trade generally. As a result of import restrictions and buyer resistance, demand for commercial motor bodies and prefabricated structures was reduced and new lines were introduced to replace this work.

Net tangible asset backing (book value)—£6/1/3 for each £1 preference, and £1/4/7 for each £1 ordinary.

Retirement Programmes for Employees

THROUGH the A.M.P., far-sighted management of Companies and Firms, and Employers generally, are arranging Retirement Programmes for Employees, under the name of Superannuation Plans.

Few of these Retirement Programmes fit into any standard pattern. The Society devises plans to fit the needs of the businesses installing them.

The strength of the A.M.P. Society is a guarantee to employees that their Superannuation Plan will provide for the future financial welfare of themselves and their dependents.

The Society will be glad to send an experienced representative to talk the matter over with any interested employer.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings. Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

DEPENDABILITY POWER PERFORMANCE

Yours when you fly "The President" to London...via U.S.A.

Double-decked "Strato" Clippers* are world's largest, most dependable airliners. They're powered by four giant engines developing 14,000 horsepower! Have an operating range of 4,000 miles — more than *twice* the average non-stop flight!

Pan American has been flying double-decked "Strato" Clippers across the Pacific and Atlantic for four years! That's performance you can rely on.

You fly in world-famous luxury, too. On THE PRESIDENT you enjoy individual sleeping accommodations—Sleeperette* service or roomy berth—at no extra charge. Superb hot meals . . . complimentary Champagne . . . courteous service.

Two PRESIDENT flights weekly from Sydney. No dollars needed with Commonwealth Plan to London . . . fare payable in Australian currency.

For confirmed reservations, call your Travel Agent, or Pan American
Sydney: Mezzanine Floor, Hotel Australia. BW 4701, BW 1591
Melbourne: 5th Floor, Bank of New South Wales Bldg., 368 Collins St. M1185-6

Company Reports

ALLIANCE ACCEPTANCE CO. LTD.—Registered office transferred to 21 Macquarie Place, Sydney; Share Register remains at 126 Phillip St., Sydney.

AUSTRALIAN PAPER MANUFACTURERS LTD.—Net profit year ended June 30, £545,587 (last year £1,042,116) after depreciation £598,844 (£535,014) and taxation £256,000 (£981,200). Sales were 96,143 tons compared with 154,662 tons in the previous year. Sales volume improved during the second half of the financial year; in recent months sales and profits have been satisfactory.

BEETLE-ELLIOTT LTD.—Net profit year ended April 30 was £20,508 after taxation £16,000.

BENDIX CONSOLIDATED INDUSTRIES LTD.—Factory and registered office transferred from 73 Wellington St., Collingwood, to Carinish Road, Clayton.

BITUMEN & OIL REFINERIES (AUST.) LTD.—Profit year ended June 30, £293,887 after taxation £256,315.

CAPEL COURT INVESTMENT CO. (AUST.) LTD.—Revenue for six months ended June 30 has been maintained when compared with the same period in 1952.

CHEVRON LTD.—Directors rejected an offer to shareholders of 50/ per share which was conditional upon a 51% acceptance. Negotiations proceeding with possible purchasers at higher prices.

THE CITY MOTOR SERVICE LTD.—Directors recommend shareholders to place the company into voluntary liquidation; it is anticipated that final return will be considerably in excess of paid up value of the shares.

DANIEL SCOTT INDUSTRIES LTD.—Consolidated net profit, subject to audit, £29,184 (last year £14,859) after taxation £27,186 and depreciation £3,137.

HALIBURTON INVESTMENTS (AUST.) LTD.—For six months ended May 31, revenue has been maintained when compared with the same period in 1952.

HOADLEY'S LTD.—Interim report six months ended June, trading results at least as satisfactory as for the similar period last year. Sales buoyant and demand for products continues.

HOPKINS ODLUM LTD.—Interim report to 30/6/53; although overall turnover was below that for the same period last year, some of the company's products are in greater demand and sales are now increasing.

HUDDART PARKER LTD.—Interim report to 30/6/53; operation of vessels has shown reduced return, but improved patronage and better turn-round of ships may restore results in the remainder of year.

HUMES LTD.—Consolidated net profit for year ended June 30, £625,860 after taxation £547,013 and deduction of outside interests' proportion.

J. H. WHELAN LTD.—Registered office now situated at 169 Smith St., Fitzroy.

JOHN McILWRAITH INDUSTRIES LTD.—Net profit year ended 30/6/53 £241,494 after taxation £188,513 and depreciation £28,842.

THE LEVIATHAN LTD.—Profit year ended 31/7/53 £36,361 (last year £22,677) after taxation £34,500 (£15,000).

MYTTON'S LTD.—Net profit year ended June 30, £61,649 (last year £60,115) after depreciation £13,850 (£14,166) and taxation £60,000 (£55,440).

NATIONAL RADIATORS LTD.—Net profit year ended June 30, £44,157 (last year £53,203) after taxation £41,831 (£51,840). New factory building being erected in Sydney covering 12,500 square feet to provide for 1954 production when radiators will be produced for eighteen different model cars and trucks.

NOR'-WEST WHALING CO. LTD.—499 whales taken to August 30 compared with 380 to same date last year.

PRESIDENT CONSOLIDATED LTD.—Consolidated net profit year ended June 30, £55,863 (last year £24,264) after taxation £42,503 (£15,280) and depreciation £11,993 (£7,137).

RIVERHART LTD.—Net profit year ended June 30, £40, after depreciation £14,492. No dividend recommended.

ROCKMAN'S SHOWROOMS LTD.—Consolidated profit y ended June 30, £120,974 (last year £110,168) after taxat £116,564 (£84,785) and depreciation £28,936 (£13,308).

ROCLA PIPES LTD.—Profit year ended June 30, was c siderably more than the previous year; prospects are that tu over for current year will be lower, but profitable trading sho continue.

SIDDONS DROP FORGINGS LTD.—Net profit of par company year ended June 30, £33,944 after taxation £26,298 depreciation £7,971.

STEELE & CO. LTD.—Consolidated net profit year en June 30, £49,238 (£55,006 last year) after depreciation £4, (£3,793) and taxation £39,564 (£40,179).

TRANS OTWAY LTD.—Net profit year ended June £8,511 after taxation £5,517 and depreciation £6,309.

TREADWAYS LTD.—Net profit year ended July 31, sub to audit, £65,138 after taxation £54,000.

TROJAN LTD.—Consolidated net profit year ended J 30, £5,191 (last year £12,702) after taxation £3,361 (£9,7 and depreciation £4,592 (£3,062). No ordinary dividend rec mended.

T. S. GILL & CO. LTD.—Profit year ended June 30, £8 after depreciation £3,239 and taxation £7,746.

TURNER MANUFACTURING CO. LTD.—Profit year en June 30, before taxation £20,946 (last year £34,246).

WHALE INDUSTRIES LTD.—Season's quota of 500 cau and a further quota of 200 whales granted by the Internati Whaling Commission.

WILKE & CO. LTD.—Profit year ended June 30, subjec audit, £39,544 after taxation £38,500 and depreciation £19,

ZEVENBOOM HOLDINGS LTD.—Net profit after tax ended June 30, £20,304 (last year £21,865) after taxa £15,799 (£17,160) and depreciation £2,706 (£1,964).

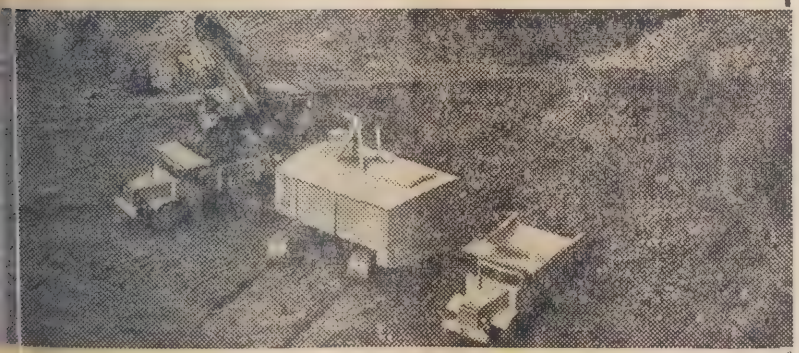
MELBOURNE and METROPOLITAN BOARD of WORKS

CASH AND CONVERSION LOAN

ile money robbing you? Then put it to work immediately
4-15-0 per cent! By investing in the £1,600,000 Melbourne
n Metropolitan Board of Works Cash and Conversion Loan,
o not only assure yourself of a high rate of interest—more
n double bank interest — but you are also sharing in the
rgress and prosperity of a great City and a thriving State.
vryone is eligible! You can invest as little as £100.

WATER IS LIFE! Help complete these essential projects



iant shovel and trucks excavating part of the nine million cubic yards of ock and earth required to build the Upper Yarra Dam. Each bite of this uge shovel lifts 3½ tons into waiting Diesel trucks of 15 tons capacity.

A TRUSTEE INVESTMENT IN VICTORIA. This Loan is an authorised investment for trustee funds in Victoria and is indeed a gilt-edged investment opportunity.

SUBSCRIPTIONS. You may either subscribe in full on application, or pay 10% on application and the balance not later than November 15, 1953.

PERIOD. This Loan is issued at par for an optional period of 10 or 15 years from October 1, 1953.

INTEREST FROM THE DAY YOU INVEST. From the moment you invest your money it starts to earn interest. At 4¾% (£4/15/- a year on every £100) it is the highest rate obtainable on a semi-governmental public loan.

UNDERWRITERS. The Loan is underwritten by Ian Potter & Co., members of The Stock Exchange of Melbourne.

WHERE TO APPLY. Applications may be lodged, free of exchange, with the Board's Bankers—the Commonwealth Bank of Australia and the Australia and New Zealand Bank Ltd. — at any of their branches in Victoria or their principal offices in Sydney and Adelaide; also at the Board's Head Office, 110 Spencer Street, Melbourne, or through any member of recognised Stock Exchanges throughout Australia.

CONVERSION OF MATURING LOAN. **Holders of Debentures or Inscribed Stock of Loan No. 125 maturing on 1st October, 1953, are urged to convert their present holdings to this loan at the higher rate of interest.**

The Ballarat Brewing Company Limited

Reg. Office: Dana St., Ballarat, Vic. **Directors:** O. J. M. Coghlan (Chairman), T. E. Byrne, H. B. Berry, B. E. Hayden, J. N. Coghlan. **Auditors:** Fuller, King & Co.

57th Year ended May 31, 1953. Meeting August 7, 1953.

Output of bottled beer was a record, but bulk sales declined following increased excise levies last year. Increased selling prices from May, 1952, contributed to profits, which were almost 50% higher at £73,634, returning 9.8% on capital; dividend was maintained at 7½%.

The following review by the Chairman, Mr. O. J. M. Coghlan, was circulated to shareholders with the Annual Accounts:

In many ways the financial year just concluded has been an eventful one. It commenced with the advantage of a price increase granted during May, 1952, which compensated to some extent for rising costs of production to which I shall refer later. We also commenced the year with an increased output of bottled beer which we were able to maintain throughout, and this factor was chiefly responsible for the higher profit reported by your Directors.

Packaging

An important change has also taken place in the packaging of bottled beer. The Company purchased an automatic glueing and sealing machine for cartons in which one dozen of beer is packed. This method is proving most popular in rural areas and is also the most economic method for the interstate market.

Stainless steel casks were introduced by the Company for the first time and these are proving a great success, but due to the outlay involved and the large number of wooden casks at present being used, it will be many years before we can convert entirely to steel.

The decline in bulk sales reported last year has continued and is general. It is attributable to the steep rise in excise duty to 7/2d. per gallon imposed by the Federal Government in September, 1951. It is interesting to note that the Company has paid £1,569,348 in excise duty this year.

Volum Brewery, Geelong

Your Directors have already reported to you about the purchase of the Volum Brewery, Geelong, together with 21 hotel properties and other assets. We consider the transaction to be a very sound one which will enable the Company to consolidate its interests in the two leading provincial cities of Victoria. Both cities are progressing rapidly in the industrial field and form dual gateways to the rich agricultural and pastoral districts of Western Victoria and the Wimmera. Plant has already been ordered, which, when installed, will enable the Brewery at Geelong to more than double its output, and, at the same time, will form the nucleus of plant for one of the most modern breweries in the world. The consoli accounts have been presented to you, but you will realise tha yet, your Directors have not had sufficient time to implement policy and a full report of operations will be given to you next

Production Costs and Price Control

For the first time since the war, raw materials and sup have been easier to obtain in quantities sufficient for the Comp requirements, but in keeping with the times, prices of these mat have risen still further during the year, counteracting the be of the price increase for beer referred to earlier. The acc for the Ballarat Company have had to bear the following incr in costs from time to time during the twelve months:—

Basic Wage—£1 per week.
Malt—6/3d. per bushel.
Hops—1/- per pound.
Sugar—£10/6/- per ton.
Freight—20%.
General Expenses—Approximately 10%.

The accumulated effect of this in the accounts presented t was more than £40,000 which is more than half the net although the increases did not operate over the whole of the p If production remains about the same for the ensuing year effect of these costs on the accounts will be in the vicini £80,000. It can be understood, therefore, why breweries applied for a further price increase which, as yet, has been held. It is difficult to conceive a more unreasonable act tha de-control the prices of some of the chief ingredients of a pr whilst the product itself is still under price control but this happened to your Company, and others, under the present sy Beer, the working man's beverage has become, for some unk reason, a political commodity and why it is not subject t same privileges as other goods purchased by the average c is difficult to understand.

The major trouble in this industry, of course, is the F Government's imposition of exorbitant excise duty which has th the economy of the industry out of balance. It is forecast t substantial reduction in duty on spirits will be allowed in the

udget. Beer has been mentioned with much uncertainty, but is to be hoped that it will receive its fair share of relief from e heavy burden it carries.

Leaving excise duty out of the price of beer, the cost to the nsumer is still only 57% more than in 1939. Compare this in-ease with the rise in some of the household necessities:—

Potatoes	150%
Milk	216%
Bread	200%
Eggs	392%
Clothing	400%-600%
Beer	57%

It would appear, then, that breweries have not been unreasonable expecting a higher price for beer and it is only the increased ade and by means of the most rigid economy which has enabled ofits to be maintained around pre-war level, even though the und has depreciated to about one-third of the pre-war value. It to be hoped that those in authority will soon make a more logical proach to the price fixing problem and allow a reasonable margin th which to keep plant up-to-date and replace worn-out buildings, d at the same time, give to shareholders a return more commen-rate with present day worth.

Properties

On the property and hotel side, the Company has been able to intain its repair and improvement programme. More than £50,000 s spent under this heading, approximately half of which was of capital nature. Our tenants have also played their part in im-oving the standard of service. Once again, we have had much idence that price control is out of touch both with the cost of hotel service and with the traveller's willingness to pay for that service.

It is worthy of mention that a departure was made from the old methods of painting hotel properties this year and experiments in decoration on English lines with a modern colour scheme have been carried out with much success.

Directors and Staff

It is with regret that I refer to the death of one of your Directors, Mr. Charles Norman Tulloch, who died on 30th April last. He was the son of the late William Tulloch, the founder of the brewing business of Tulloch & Son which was amalgamated with the Magill & Coghlan Brewery in 1895 when the present Company was formed. Mr. Tulloch first joined the staff in 1901, later becoming chief brewer and was brewery director until he retired from the latter position a few years ago. Mr. Tulloch gave many years of his life to valuable service in the Company's interest and his passing was a loss to all who knew him. The vacancy on the Board was filled by Mr. J. N. Coghlan who has served the Company for more than twenty years as a brewer.

Major staff changes during the year include the appointment of Mr. H. C. E. Evans as General Manager and Mr. O. A. Coghlan as Manager and Secretary. Mr. Jasper F. Coghlan was transferred from the managership of Hamilton Office to Volum Brewing Co. Pty. Ltd. and his position at Hamilton was filled by Mr. J. Deutschmann who was transferred from the Ballarat staff.

In conclusion, I desire to commend the staff once again for the completion of a satisfactory year's work. There have been many changes and difficulties which have been overcome and on behalf of the shareholders I would like to thank them for their continued loyal service.

Christy Products (Aust.) Limited

Manufacturers of Soaps and Perfumes.

g. Office: 178 Normanby Rd., Sth. Melb. **'Phone:** MX 1291. **Directors:** F. H. Lonie (Chairman), F. G. L. Harding, Mrs. F. M. Blogg, G. F. Davies. **Auditor:** S. B. Wills-Cooke.

36th Year ended April 30, 1953. Meeting June 8, 1953.

Trading was limited by high sales tax and heavy advertising by competitors. A trading loss of £225 was sustained, t dividends on the publicly held preference shares were maintained out of a surplus of £4,623 realised on the sale of assets.

We lunch together every week.....

... we're both in the same line of business; however, yesterday talk swung away from business and we got talking about our families and their future if we were not around in our usual places.

Arthur made a suggestion that as both our businesses were akin, maybe one could accept the responsibility of both the shows if anything should happen. My reply was . . .

but we're not that friendly.....

after all, if I can beat you to a contract I will and you'd do the same; no, that wouldn't work. Anyway, I've organised things for MY family . . . I've appointed a trustee company to look after their interests by looking after *my* estate—and it's no trade secret who they are, it's NATIONAL TRUSTEES.

National Trustees is an organisation retaining a staff of experts experienced in all phases of business and estate management; an organisation which provides a* personal *interest in providing for your family all those things you have worked for . . . write, 'phone or call for literature explaining the service offered by NATIONAL TRUSTEES.

NATIONAL TRUSTEES

EXECUTORS AND AGENCY CO. OF AUSTRALASIA LTD.

	1950	1951	1952	1953
Pig Iron (tons)	626,458	738,877	843,712	905,292
Steel Ingots (tons)	684,947	757,064	822,715	959,986

At Newcastle, steady progress is being made with the fourth battery of coke ovens and ancillary plant. Preparatory work for the reconditioning of No. 1 blast furnace is almost completed.

At Iron Knob, installation of the primary and secondary crushers, tunnel conveyor and other plant and facilities are approaching completion for a new working level expected to be in production towards the end of this year.

Orders for products were lower than for some years, but increased demand experienced in recent months has been augmented by export orders, mainly for pig iron and steel billets in excess of present Australian requirements.

On December 18, 1952, the Western Australian Parliament ratified an agreement between the Government and the company which inter alia provides for the establishment of a steel rolling mill of 50,000 tons annual capacity, together with shipping facilities at Kwinana. The company has been granted certain iron ore leases at Yampi Sound and has undertaken to continue research into utilisation of coal of the Collie coalfields type for iron smelting.

The demand for products of subsidiary companies continued at a satisfactory level throughout the year. Members of the group are—

B.H.P. Co. Ltd.—The parent company of the group, directly carries on coalmining, iron ore quarrying, iron and steel production, and the manufacture of ferro alloys and tungsten carbide products; shipbuilding and ship-engine manufacture; operates its own steamers, etc.

Australian Iron & Steel Ltd.—For review of latest year refer April, 1953, "Record," page 226.

Commonwealth Steel Co. Ltd., Newcastle, is the principal Australian manufacturer of special alloy steels, including tool and stainless steels and hollow drill steels; also manufactures steel castings, forgings and railway equipment.

Rylands Bros. (Aust.) Pty. Ltd., Newcastle, manufactures steel wire, wire products, and steel fence posts.

Lysaght Bros. & Co. Pty. Ltd., Sydney, manufactures steel wire, wire products and zinc oxide.

B.H.P. Collieries Pty. Ltd., owns and operates Elrington Colliery near Cessnock, New South Wales.

B.H.P. By Products Pty. Ltd., road contractors, suppliers of Tarvenac, Colvenac, bitumen, slag and naphthalene.

Southern Portland Cement Co. Ltd., owned principally by Aust. Iron & Steel Ltd. and Howard Smith Ltd., operates cement works at Berrima, New South Wales.

The Lysaght Durham Chemical Co. Pty. Ltd., Melbourn produces zinc oxide. Owned by Durham Chemicals Austral Pty. Ltd. and Lysaght Bros. & Co. Pty. Ltd.

The Titan Manufacturing Co. Pty. Ltd., Melbourne, Hoba and Newcastle, manufactures nails, barbed wire, auger bi chisels, integral drills, and mine roof bolts.

The Australian Wire Rope Works Pty. Ltd., Newcast makers of steel wire ropes.

Bullivants' Australian Co. Pty. Ltd., Sydney, distributors steel wire ropes.

The Port Waratah Stevedoring Co. Pty. Ltd., Newcastle a Melbourne.

Associated companies are—

Tubemakers of Australia Ltd.
Rheem Australia Pty. Ltd.
The Wiltshire File Co. Pty. Ltd.
Newcastle Chemical Co. Pty. Ltd.
The Structural Engineering Co. of W.A. Pty. Ltd.

In addition, the company has substantial investments I.C.I.A.N.Z. and Commonwealth Aircraft Corporation Pty. L

The Broken Hill Proprietary Co. Ltd.

In addressing shareholders at the Annual Meeting held on ust 28, the Chairman, Mr. Colin Y. Syme, summarised the year's ations as follows:

Accounts.

The net profit for the year in round figures was £2,364,000 after iding £1,457,000 depreciation and £2,350,000 for income tax.

Balance from Working Account increased by £1,897,000 over year and reflects the improved output at the Steel Works and r operating centres, together with satisfactory returns from export of products surplus to local requirements. Income from stments, which included a 2½% dividend of £337,500 from Aus- an Iron & Steel Ltd., again contributed substantially to the profit which is £407,000 higher than last year.

As anticipated at our last meeting, it was found necessary as sult of the continuing upward trend in costs, to revise iron and l prices, and increases were announced in February last. This n, which we very much regretted, was after we had made a ful examination of our financial position and had taken active s to effect economies wherever reasonably possible.

The net profit from all sources represents approximately 6.4% shareholders' funds which stand at nearly £37,000,000. This, will agree, is a modest return on your investment and repre- s a major contribution by the steel industry to the Australian omy.

Capital expenditure during the year amounted to £3,292,000.

Trade debts at balancing date show an increase over the pre- s year due largely to the increased turnover and higher prices.

The amount owing by our subsidiary companies has decreased itly, and, as will be observed, chiefly represents advances made ustralian Iron & Steel Ltd. towards financing plant extensions he Port Kembla area.

Stocks and stores on hand increased by £1,646,000 due to in- sed volume and higher cost.

The increase in Sundry Creditors includes a partial carry over ncome tax from the previous year, payment of which was made equent to the date of balance, and the higher provision for on this year's results.

Depreciation.

Depreciation has been calculated on the original cost basis as iously. At our last meeting I spoke on this subject and ex- sed the view that the Company's depreciation charge should elated, not to the original cost of plant as it is, but to the in- d cost of replacing it. At the same time, however, I indicated great practical difficulty in the way of applying any such ge of policy owing to income tax legislation disallowing any a charge made against profits as a result of calculating de- iation on a plant replacement value. This subject is causing eat deal of concern in business and accountancy circles, but ite widespread criticism no action has yet been taken to alter legislation. The result is that private enterprise has been le to give effect to what is considered a desirable depreciа- policy in its own as well as in the national interest.

There is another aspect of income tax legislation which war- s some comment and that is its effect on works' provisions. nd business practice demands that provision be made through ent costs to meet costly repairs or replacements of plant items as furnace linings, major overhauls of machinery and a host ther items which come under the category of major repairs maintenance as distinct from capital replacements.

Accordingly, our policy over many years has been to make quate provision to cover the expired or used life of certain or expendable units of plant, and by this means avoid artificial s and depressions in costs. This is also standard practice with y industries overseas.

Needless to say, the heavy inflationary trend of late years has essitated the setting aside of increased funds to meet expendi- of this nature as and when it takes place.

The Taxation authorities do not allow these charges as deduc- s from assessable income until such time as the money is ally spent, and as a result we are in some years assessed on eater or lesser figure of income than appears in our accounts.

Production and Labour.

One of the most heartening features of the year's work is the nounced increase in steel production. Improved industrial con- ns, coupled with the completion of additional iron and steel ing capacity at Port Kembla, enabled the Newcastle and Port mbla Steel Works to produce a record total of 1,766,000 tons of tal ingots.

Since the close of the period the upward trend in production a been maintained at both centres.

There has been a general improvement in the amount of labour ilable, although shortages are still apparent in some skilled es. We are continuing our endeavours to overcome these short- s and with the helpful co-operation of the Department of Im- ration efforts are being made to select additional tradesmen rseas.

Output of coal from the Company's collieries was far below tal Works requirements, principally due to the prolonged strike John Darling Colliery and the frequent sympathy stoppages at r mines. John Darling Colliery was idle from 31st March, 1953, l 14th July, and resumed work under conditions which had en offered by the Company a few days after the dispute occurred.

Australian and Overseas Sales.

Following the heavy Australian demand for the Company's ducts during the post-war period a sharp reduction in the total ocal orders became apparent early in the financial year now er review. Although there was some evidence that Australian consumers were curtailing their purchases in order to reduce stocks, this reduction in demand applied particularly to pig iron and to semi-finished steel, and it would have been necessary to curtail production but for the fortunate circumstance that we were able to obtain overseas orders for these products at satisfactory prices. In recent months local orders for finished steel products have again improved and with the increasing output of iron and steel products at Newcastle and Port Kembla have created a need for more water-side workers at these ports. Unfortunately, the delay in achieving this objective has led to a considerable accumulation of steel awaiting shipment, together with costly delays to steamers and belated deliveries of steel to our customers who depend on sea transport.

New Construction.

During the past several years our efforts in the construction field have been principally directed to the large programme of plant additions and improvements at the Port Kembla Steel Works, and which I shall refer to a little later in more detail.

Other major construction works in hand are the erection of an up-to-date battery of by-product coke ovens at Newcastle where good progress has been made, and the new working level—Bench "G"—at Iron Knob, where preliminary quarrying operations are scheduled to commence shortly.

Whyalla Shipyard.

At the Whyalla shipbuilding yard, the fourth 12,500 ton ore carrier, s.s. "Iron Wyndham," was commissioned last February, and on 31st March s.s. "Iron Whyalla," the first 10,000 ore carrier built to our own design, was launched and is now fitting out. Two 4,750 ton colliers for the Australian Shipbuilding Board are building and will be followed by the first 10,000 ton bulk carrier to the Australian Shipbuilding Board design.

The Marine Engine Annexe and Gear Cutting Shop, which is equipped with high precision tools, has executed a number of large and intricate jobs for our own organisation and also for outside interests.

Australian Iron & Steel Ltd.

Progress achieved with the extensive programme of expansion at the works of our principal subsidiary, Australian Iron & Steel Limited, is reflected in the increased output of iron and steel at Port Kembla.

I am pleased to say that at that centre since the close of the year output of steel ingots has shown further improvement and is currently at the rate of 1,150,000 tons per annum.

During the year additions to the plant included 24 by-product coke ovens, a 1,500-ton blast furnace, a further open hearth furnace, three new soaking pits and the installation of a new blooming mill main drive motor.

The new blast furnace and open hearth furnace compare favourably in capacity with the latest overseas units and their performance is up to expectations.

In addition, a lot of work has been done on the mechanisation and expansion of the Company's collieries on the South Coast. At Bulli Colliery, the recently completed cross measure drift of approximately 2½ miles has been brought into service in conjunction with the new coal handling plant, and the benefits to be derived from these facilities should shortly become apparent in increased output and reduced coal costs.

Our Managing Director, Mr. Norman Jones, recently returned from a brief overseas visit where he had discussions with leaders of the steel industry in the United States of America and Canada on matters of major importance and interest to our industry. He was also able to conclude satisfactory arrangements for several of our personnel to gain experience in the operation of hot strip mills of the type now being installed at Port Kembla.

Our American and Canadian friends were extremely helpful and as a result of their co-operation and kindness our men are at present receiving instruction in the operation of this costly and highly specialised type of plant which is entirely new to Australia. This experience will enable them to undertake the starting up of our plant and the training of Australian personnel.

The hot roughing section of this very large plant is expected to commence rolling of heavy plates early in the New Year, and satisfactory progress is being made with the construction of the remaining section of this unit.

Increasing quantities of iron ore continue to be shipped from the Yampi deposit at Cockatoo Island.

Other Subsidiaries.

Rylands Bros. (Aust.) Pty. Ltd. continue to operate at full capacity and are heavily committed for wire, wire products and fence posts for the farming industry. There has, however, been a slight falling off in demand for bright wires in Australia.

The new wire mills at Geelong, Victoria, commenced production on 11th March last and are designed to operate initially at a rate of 500 tons of wire weekly for the Victorian market.

Lysaght Bros. & Co. Pty. Ltd. are also operating at a high level in the manufacture of wire and wire products.

The Titan Manufacturing Co. Pty. Ltd. continues to show satisfactory returns from the manufacture and sale of its products, but there has been some slackening in demand for hand-tools owing to overseas competition. The manufacture of mine roof bolts has been transferred from Port Kembla to Newcastle in which area the demand is greater.

This subsidiary has recently commenced the manufacture at Newcastle of integral drills using Commonwealth Steel Company alloy steel and B.H.P. tungsten carbide tips. This is a new venture as far as Australia is concerned.

(Continued on next page)

THE BROKEN HILL PROPRIETARY CO. LTD. (Contd.)—

Our subsidiary, The Port Waratah Stevedoring Co. Pty. Ltd., which was established at Newcastle and later Melbourne, recently acquired a 50 per cent. interest in the Port Kembla Stevedoring Company.

Port Kembla is a rapidly growing port, in the development of which our industry has contributed very considerably over the past decade. It is appropriate for us to have some control in stevedoring operations at this port in view of the large tonnages shipped by ourselves and associated industries, and we are particularly concerned to see that the limited shipping facilities are used to maximum advantage.

Other subsidiary companies are showing satisfactory results.

Western Australia.

Our agreement with the Western Australian Government provides for the establishment of a steel rolling mill at Kwinana, and is an important step towards meeting the desire of the Western Australian Government to develop heavy industries in that State.

Recent issues of the B.H.P. Review have given details of the project and this information has been supplemented by remarks in the Directors' report.

We are pleased to be associated with the Western Australian Government, and at this stage I can only add that the work involved is progressing satisfactorily.

New Zealand.

You were advised at our last meeting of the decision to establish branch offices in Wellington, Auckland and Christchurch, in order to foster a closer relationship with our New Zealand customers. The Company has now been registered in New Zealand and the new arrangement became effective as from the beginning of the present month.

Overseas Associations.

During the latter part of 1952 our Managing Director, Norman Jones, visited South Africa and India. Whilst in So Africa he had the privilege of representing the Australian s industry at the official opening of the new steel works of the So African Iron and Steel Industrial Corporation Limited at Vand bijl Park. This visit afforded Mr. Jones an opportunity of meet leaders of the steel industry in South Africa and India.

In keeping with our long standing policy, certain other offic were abroad during the year and several are at present av studying latest overseas developments in the industry.

During the year we had the pleasure of welcoming a num of overseas friends at our various centres. We are hopeful t others will also find it possible to visit us. In addition to show them what we are doing in Australia, we look forward to opportunity of reciprocating the kindness extended to members our organisation over many years.

Directors.

During the year there have been two changes in the direct ate, one by the untimely retirement of Mr. H. B. Piper on 3 January, 1953, owing to ill-health, and whose subsequent dem we very deeply regret.

The other was caused by the resignation of Sir Lennon Ra In accepting his decision to retire your Directors placed on rec their appreciation of his excellent service in the interests of Company during a period of fourteen years.

Mr. L. Gordon Darling and Mr. Ian M. McLennan, Gene Manager of the Company, accepted invitations to fill the vacanc

Appreciation.

In conclusion, I wish to convey the appreciation of the Bo to employees, staff and management for their co-operation dur the year.

Edwards Dunlop & Co. Ltd.

Paper Merchants, Wholesale Stationers, Etc.

Reg. Office: 123 Clarence St., Sydney. **Directors:** W. P. Dunlop (Chairman and Manag. Director), B. D. Goodwin (Vice-Chairman), W. C. Shea, B. F. Lloyd, J. W. Dunlop, B. M. Peterson, A. P. Kennan, D. O. Anderson, A. G. Fischer. **Auditors:** Parsons, Anderson & Co.

84th Year ended April 30, 1953. Meeting June 26, 1953.

Turnover was lower, owing to import restrictions and the recession in trade. Stocks were reduced by £355,000 to £916,000. Profit was steady at £83,632 and dividend was again 12½%.

Directors state that, after drawing £40,000 from Stock Reserves, the stock reserves which remain after this charge represent a slightly higher percentage of current stock value than they did last year and are ample for any forseeable contingencies.

In his address to shareholders at the Annual Meeting on Jul the Chairman, Mr. M. Shmith, said:—

Inclusive of dividends, totalling £31,345, received from the sidiaries, the trading profit of your company for the year £168,980. The net profit for the year was £105,730, after provi £63,250 for taxation. A further amount of £691, being a surplu tax provision from the previous year, is available for appropria making a total amount for the year of £106,421.

As a result of the year's trading, the Directors have recomme a dividend of 10% and a bonus of 7½% on ordinary shares, ma a total disbursement for the year of 17½%. It is proposed to with the profit for the year as follows:—

Transfer to general reserve		£6
Final dividend of 5% on fully paid ordinary capital	£10,994	
Bonus of 7½% on fully paid ordinary capital	16,490	
Final dividend at rate of 7% for the half-year on preference capital	875	
		£28,359
which, with the Interim Dividends paid on January 31, 1953, being—		
5% on ordinary capital	10,994	
At rate of 7% for the half-year on preference capital	875	
		11,869
absorb a total of dividends and bonus for the year of		40
leaving a balance of unappropriated profit of		1
which is added to the carry forward at the credit of the profit and loss appropriation account of £20,848, making a balance to be carried forward of £22,041.		

The balance of the consolidated profit and loss appropria account is £29,453.

Shareholders' Funds.

At the balance date, the shareholders' funds, as represented tangible assets of the company and its subsidiaries, totalled £613, made up as follows:—

Ordinary shares	£219,875
Preference shares	25,000
	£244,875
Reserves and undivided profits, less intangible assets	368,349
	£613,224

Stocks.

It will be noted that stocks on hand in the consolidated accou have been reduced from £484,678 to £382,078—a reduction of £102, The greater availability of local supplies, together with a c scrutiny of stock orders, have been contributing factors in this provement. Careful stock control has actually resulted in an incre in the range of items available for sale. Evidence of the succes our trading policy may be gauged from the fact that sales for first three months of the new financial period have been maintai despite keen competition. We enjoy the goodwill of both our s pliers and customers, and our financial stability is such that can plan for steady expansion as opportunity offers.

New Lines.

Your company, through its subsidiary, Starting Lighting Igni Pty. Ltd., has been appointed a Victorian Distributor for Smi Motor Accessories Ltd., the Motor Accessory Division of S. Smit Sons (England) Ltd. Smiths are the Empire's largest motor inst ment makers and their range is the most comprehensive in world. The new lines will include speedometers, oil gauges, clo and car heaters. Smiths instruments and accessories should pr a valuable acquisition to the ever-increasing list of important tributorships held by your company.

Sydney Branch.

I am pleased to report that the Sydney warehouse has b completed and the new building is now fully occupied. The ruption caused by rebuilding affected our Sydney business, but, s full re-occupation, sales have shown a very satisfactory incre The Board is confident that the Sydney Branch will continue to g a larger share of the business available in New South Wales.

Restrictions on Road Transport.

I am concerned at the legislation designed to restrict he road haulage on our country roads. Governments should realise t such a policy will also retard development of areas distant fr capital cities. Road transport is an established and irreplace factor in the Nation's economic life, and restrictive policies m act as a brake upon Australia's development. Governments, b State and Federal, appear to regard a motor vehicle, from the t of its importation until it is finally scrapped, only as a means revenue.

---

he following address was given by the Chairman, Mr. T. e, to shareholders at the Annual Meeting on August 27:—

uring the year under review we suffered a serious loss of a nal friend, and a valued colleague, by the very sudden death Dalziel Kelly. His wide knowledge and his readiness to make me available was of great value to your Company.

/e were pleased that Mr. George Charlton Tootell, who was tary of the Company, accepted our invitation to join the Board the vacancy caused by the death of Sir Dalziel Kelly.

r. Ronald Moore, who is a partner of Mr. Tootell in the firm of Clark, Tootell & Co., agreed to accept the appointment of tary.

Trading Results.

he net profit for the year was £7,550, an increase on that of revious year of only £311.

ccupancy figures have been maintained at a most satisfactory and this, together with close attention to management, has ed the Company to present satisfactory figures in spite of ises in both wages and food costs.

ollowing the practice established in the previous year, an amount 850 has been allocated, in arriving at profits, as a provision pairs, bringing the total provision to £4,200.

epair expenditure in the year under review was less than usual, n the opinion of your Board, it is prudent to make provision at type of wear and tear which, although it does not call for tinuous attention, nevertheless requires material expenditure in ear when renovations or repairs are required to make it good. lor painting of the building is an example of this type of .

he purchase of a residence for the accommodation of the ger and his family enabled the rooms previously occupied by at the hotel to be used for accommodation of guests. This sed earning capacity during part of the year and provides sed capactiy for future earnings.

Dividend.

he interim dividend of 2% paid in February last plus the in- ed final dividend of 5% now recommended will make a total tribution of £5,390 for the year. The usual transfer of £1,250 to ve, increased this fund to £23,750 and accumulated profits n at £9,555.

ur Directors are pleased to be able to recommend an increase dividend rate from 6% to 7%.

epreciation is a provision to which your Board has always particular attention. The buildings, equipment and furnishings e at all times, been maintained in a first class state of repair. has involved in every year the expenditure of material sums keep, but the Directors place prime importance on the pre- ion of the assets of the Company. For that reason, although uildings and plant are worth today much more than the cost £4,646, which appears in the Balance Sheet, depreciation pro- ics now aggregate £106,923 and with the continuance of this the Company should be able to cope with any contingency.

Offer to Purchase Shares in the Company.

n August 19, a circular was sent to all shareholders advising of an offer of 50/- per share for from 51% to 100% of the in Chevron Limited. Your Directors were not desirous of accepting the offer in respect of their own shares and were not prepared to recommend shareholders to sell.

Messrs. J. B. Were & Son, by whom the Company was floated in 1934, wrote to their client shareholders advocating acceptance of the offer.

Directors asked all shareholders who wished to do so, to return a form indicating:—

1. If they desired the offer to be rejected, or
2. If they would be prepared to accept the offer.

In the circular it was stated that no reply would be taken as an indication that shareholders wished Directors to use their discretion.

Replies received by August 26, the date stipulated, were:—

	Holders of shares
Reject	38,373
Accept	2,982
No reply (indicating Directors use their discretion)	34,352
Replies indicating neither acceptance nor rejection	1,293

The reason for the date, August 26, being fixed, was to enable Directors to make an effort to get scrip and transfers in by September 7 (which was the date fixed for acceptance of the offer) if the majority of shareholders wished the offer to be accepted.

In vew of the small number desirous of acceptance, the Directors will advise Messrs. J. B. Were & Son that their offer is not acceptable.

Replies received both in writing and verbally are gratifying in that they indicate the majority of shareholders prefer to accept the advice of the Board of Directors that has been responsible for the success of the Company. Accountants representing some of the prospective purchasers are now investigating the Company's figures with a view to submitting an offer.

Appreciation.

We desire to place on record our appreciation of the services rendered by the Manager (Mr. J. C. Carrodus) and the Staff.

"Economic conditions in Australia have responded to the correctives applied by the Government over the past two years. Instability in many phases of the economy has been replaced by a quiet confidence and an improvement in industry generally. Production of steel, coal, building materials and primary products such as wool, wheat, meat and sugar is either at or near record levels," stated the Chairman, Mr. W. S. Reid, in his address to shareholders at the Annual Meeting on August 20. Mr. Reid's address reads:—

This Annual Meeting of stockholders takes place in a year of great significance to the British Empire. On June the second, Queen Elizabeth II was crowned at Westminster and it is fitting that we should first record our loyalty and allegiance, uniting with her people throughout the Empire in the hope that Her Majesty's reign may be a long, happy and prosperous one.

Stockholders' Funds.

Net profit, £421,345, increased by £80,782, and is equivalent to 6.3 per cent. of stockholders' funds. Gross earnings, £5,089,327, after making provisions for contingencies, rose by £545,369, and although increased salaries, general costs and the higher taxation absorbed the greater part of the improved earnings, it is pleasing to observe the substantial improvement in net profit.

Interim dividends on Preference and Ordinary Stock were unchanged and your Directors now recommend payment of final dividends at the same rates, making 4 per cent. on Preference Stock and 10 per cent. on Ordinary Stock for the year.

Balance Sheet.

Authorised Capital, £5,000,000, Paid-up Capital, £4,117,350 and Reserve Fund, £2,250,000, remained unchanged at the date of the balance sheet, but, as stockholders are aware, each of these items has since been substantially increased. Authorised Capital is now £10,000,000, and upon the new issue of Ordinary Shares becoming fully paid, Paid-up Capital will be £5,170,284 and Reserve Fund £3,000,000. With this proposal stockholders have already expressed approval, and the issue has been successfully floated.

I would like to refer here to the erroneous statement so frequently made in the Press and elsewhere that Australian Trading Banks are privately owned. This is quite incorrect and misleading—Australian Banks are Public Companies, carrying on business under the provisions of the various Companies Acts operating in the several States of the Commonwealth. Shareholders of the Trading Banks number approximately 80,000 while, allowing for nominee companies and investment companies who hold shares on behalf of many small individual holders, the number of shareholders would approximate 100,000.

The number of stockholders recorded on the Registers of the Bank on June 30, 1953, was 10,944, and it is again of interest to note that the average amount of capital held amounts to only £376 per stockholder, the average dividend payable for the year being £ per person, which exposes the oft-repeated fallacy that the Banks are owned by a few wealthy people who are said to manipulate credit for private profit. The owners of this Bank can be found amongst every trade and industry in Australia and New Zealand, and include artisans and thousands of people of small means.

Deposits, Bills payable, and other liabilities, £177,282,772, increased by £24,700,409, reflecting the continued buoyant level of Australia's primary products and the greater liquidity of industry generally.

Coin, bullion, Australian and Reserve Bank of New Zealand Notes, and Cash at Bankers, £17,312,984, increased by £4,080,23 while Cheques and Bills of other Banks, £4,447,217, declined £1,580,505.

Money at Short Call in London, £1,750,000, increased by £312,50 a fluctuation reflecting the curtailment of imports.

Treasury Bills, £4,000,000, are £6,500,000 lower, but this was more than offset by an increase of £13,255,075 in Public Securities, which rose to £18,090,858.

Special Account with Commonwealth Bank, £34,548,000, increased by £13,300,000 owing to substantial calls made by the Central Bank under the amended Banking Act.

Bills Receivable and Remittances in Transit, £12,769,229, rose £2,198,349, reflecting the higher value of exports.

Liquid Assets now total £93,168,395, an increase of £25,144,16 and equal 52.54 per cent. of Liabilities to the public, clearly indicating the strong position of the Bank and its ability to play a full part in financing the demands of business in both Australia and New Zealand.

Loans, Advances and Bills Discounted, £87,388,435, were £730,372 lower. Reduction in traders' stocks resulted in this item decreasing considerably during the year, but replacement orders have increased overdrafts in recent months.

Bank Premises, Furniture and Sites, £3,444,091, is £305,850 higher. Purchase of additional properties and reconstruction or enlargement of existing premises were essential to cope with the Bank's expanding business. In reduction of this item your Directors have substantially increased the allocation from profits from £45,000 to £125,000.

Total Assets have now reached the record figure of £191,618,936, an increase of £23,290,154.

Seasonal Conditions.

The season opened satisfactorily over most of Australia, but many areas are still experiencing dry conditions. Welcome rains have fallen over the larger portion of the southern States and pastures are in good heart although cold weather has retarded growth.

The Riverina, south-west portions of New South Wales and western Queensland continue dry, little rain having fallen in these areas in recent months. Conditions in Victoria, South Australia, Tasmania and southern Western Australia are, in general, good.

Wool.

An abnormally good season, assisted by the success of the myxomatosis rabbit destruction campaign, resulted in wool production increasing to 3,851,000 bales, the highest figure ever recorded.

Satisfactory prices were realised throughout the year, the total wool cheque being £403,211,000 compared with £323,429,000 in 1951-52. Competition of synthetic fibres is growing, but the world demand for wool is such that a continuance of satisfactory prices appears likely.

Wheat.

The area sown to wheat for 1952-53 season, 10,107,000 acres, was the lowest since 1923, but the good season and improved farming methods resulted in the record average yield of 19.1 bushels per acre. Total crop was 193,000,000 bushels, being 33,000,000 bushels greater than the previous season.

Dairy Produce.

Improved seasonal conditions in the dairying districts of northern New South Wales and southern Queensland, which suffered from drought in 1951-52, resulted in production of whole milk, butter and cheese rising considerably, which more than offset the slight decline in Victoria's production.

Factory butter production totalled 160,000 tons, an increase of 9,000 tons compared with the previous year, and cheese totalled 8,000 tons, an improvement of 8,000 tons. Exports of butter reached 5,000 tons, valued at £18,000,000, compared with 10,000 tons valued at 4,400,000 the previous year.

Meat.

Production of meat improved under all headings except pig meats. Beef and veal totalled 625,000 tons, compared with 585,000 tons the previous year, mutton 200,000 tons, lamb 140,000 tons, and canned meat 95,000 tons.

The gross value of all meat produced increased from £133,000,000 to £170,000,000 while proceeds of exports rose from £24,600,000 to 53,300,000, the volume exported improving from 116,000 tons to 54,000 tons.

Sugar.

The excellent season enjoyed in 1952-53 improved production of sugar from 747,000 tons to 947,000 tons. During the year exports also increased substantially from 168,000 tons to 497,000 tons valued at £23,000,000 compared with £7,000,000 the previous year.

Staff.

The staff in Australia, New Zealand and London have continued to uphold the high traditions of the Bank, and I would like to convey to them, on behalf of stockholders, our appreciation of the loyal and capable manner in which they have carried out their duties. The result of their efforts is evidenced by the greatly increased figures shown in the balance sheet.

I stated in my address last year that Mr. P. F. G. Gordon, who had been General Manager for the past 19 years, after six months' furlough starting on January 1 last, would retire on June 30, 1953. Under his management the Bank made outstanding progress and your Directors desire to place on record their appreciation of the valuable services he rendered over a long and difficult period.

Mr. Edward Cook, who has been Assistant General Manager since 1942, was appointed General Manager as from July 1. He has been Acting General Manager since January last, and your Directors have every confidence the Bank will continue to progress and expand on sound lines under his guidance.

Mr. H. F. Clarke, Senior Chief Inspector, has been appointed Deputy General Manager, and Mr. N. A. Jackson, Assistant General Manager.

New Zealand.

A satisfactory season was experienced in the pastoral and dairying areas of New Zealand although excessive rain caused much inconvenience and delay in shearing and harvesting. Production of dairy products, meat and wool attained high levels and larger quantities were available for export.

During the twelve months ended March 31, 1953, proceeds of exports totalled N.Z. £227,000,000 and imports N.Z. £202,000,000.

The Dominion's overseas funds as at the end of May had improved by N.Z. £40,000,000 during the year to the satisfactory level of N.Z. £117,000,000 and the Reserve Bank of New Zealand recently announced some relaxation in exchange control, permitting increased imports.

Production of the basic primary products for export is steadily increasing and adoption of improved farming methods has resulted in bringing into cultivation large tracts of hitherto unused land.

Banking Legislation.

In February last the Commonwealth Government introduced the Commonwealth Bank Bill 1953 and the Banking Bill 1953. Both Acts are now on the Statute Book and came into operation on April 29, 1953.

The main purpose of the Commonwealth Bank Act was to establish, as a separate legal entity, the Commonwealth Trading Bank, but it failed to bring about the complete separation of the Trading Bank from the Central Bank. Both Banks remain under the control of the Governor and the Commonwealth Bank Board.

The Banking Act contained several important amendments to the 1945 Banking Act, but retained the system of Special Accounts whereby the Trading Banks are required to lodge funds with the Central Bank in accordance with the formula laid down. The amended formula provides for freezing 75 per cent. of any increase in a Trading Bank's deposits since September, 1952.

With the expansion of Australia's economy, deposits with the Trading Banks will continue to increase as a natural sequence. It is the function of the Trading Banks to assist industry to expand, but if the new banking legislation is not administered wisely with due regard to the requirements of industry, the Special Account procedure can operate to the serious detriment of the community.

Experience has proved that undue freezing in Special Accounts by the Central Bank of Trading Banks' funds, deprives the banking system of that flexibility esesntial to meet the ever-changing demands encountered in Australia.

Other countries are endeavouring to free their economies of hampering restrictions and Australia cannot afford to continue an experiment that imposes unnecessary rigidity on the financial structure required in a rapidly expanding country.

It is regretted that the Government did not pay more regard to the unanimously expressed opinion of the Trading Banks who had a wide experience of the unsatisfactory features of the 1945 Banking Act.

Economic Conditions.

Economic conditions in Australia have responded to the correctives applied by the Government over the past two years. Instability in many phases of the economy has been replaced by a quiet confidence and an improvement in industry generally. Production of steel, coal, building materials and primary products such as wool, wheat, meat and sugar is either at or near record levels.

Exports for the year ended June 30, 1953, totalled £872,000,000, an improvement of £197,000,000, while imports, still subject to restrictions, totalled £514,000,000, or less than half the previous year's figure of £1,053,000,000. An adverse trade balance of £378,000,000 for the year ended June, 1952, has been converted into a favourable balance of £358,000,000 for the year 1952-53. Australia's overseas funds have risen from £362,000,000 on June 30, 1952, to over £500,000,000 in July, 1953.

Heavy expenditure has been incurred by Governments and governmental bodies on developmental schemes for power and water conservation, necessary for the future progress of Australia, and several large industrial projects have been commenced by oil, chemical and other interests.

Traders, importers and manufacturers have seen their surplus stocks reduced to more normal proportions and employment has returned to high levels after the decline in 1952.

All these features have influenced the return of confidence in the business community and the public.

Reductions in taxation promised from the forthcoming Federal Budget should assist in providing incentive to employers and employees alike to increase their productive efforts. The resulting improvement in production should benefit the whole community. With a fixed basic wage it is hard to understand the objection to incentive payments or to the worker producing in excess of a low average output. Lack of incentive creates inefficiency and militates against the desire to improve the standard of skill so urgently needed in modern industry.

The problem of expanding output without increasing costs is the crucial question confronting Australia today. Inflation has been retarded, but not defeated. Cost of living increases for the six capital cities for the past four quarters totalled 9/- compared with 38/- for the previous twelve months, but hourly wage rates in this country have in the past six years risen from approximate parity with the United Kingdom to some 75 per cent. to 100 per cent. higher.

Similar disproportionate increases are shown in comparison with other major manufacturing countries. There can be only one result of a continuance of this disparity in costs, namely to price Australian goods out of competitive markets at home and overseas.

Australia unfortunately is not entirely in step with the healthy world trends towards the elimination of controls and restrictions made necessary by the conditions of the war and its economic aftermath. For instance, in June of this year the State Government decided to re-introduce controls over certain ranges of clothing and piece-goods, after a period of decontrol lasting a mere nine months. This is a serious retrograde step which can have no justification in basic economics, since the goods controlled are in ample supply. The decision to re-control these prices must therefore be attributed to doctrinaire political motives. The whole experience of price control suggests that it diverts production away from commodities most needed to those of a less essential character and retards the development of new products and processes which are the very basis of higher living standards. In administration alone price control is costing the public over £1,000,000 a year in extra taxes, quite apart from the indirect costs imposed on business by the work involved in conforming with the prices regulations. These taxes and the expense carried by the business community is of course reflected in higher costs and prices paid by the consumer.

The example being provided by other democratic countries clearly indicates that Australia should rid its economy of all unnecessary restrictions and place greater reliance on the free market mechanism.

(Continued on next page)

THE COMMERCIAL BANK OF AUSTRALIA LTD. (Contd.)—

Payroll Tax.

A great deal of criticism has recently been levelled at payroll tax. This tax which was introduced by the Commonwealth Government in 1941 to assist in financing child endowment, represents a direct addition to labour costs, thus further adding to costs of production, and is a material factor in increasing the cost of living. But perhaps the most regrettable feature of payroll tax is that it falls inequitably upon industry. It is a particularly heavy and unfair burden on those trades in which wages and salaries form a high proportion of total costs. Payroll tax is an arbitrary measure introduced in haste under the emergency conditions of war. As soon as possible it should be withdrawn and replaced by a mo logical and satisfactory arrangement for financing the costs social services.

Conclusion.

The future of Australia is bright; indeed if the disproportionate high cost structure is brought into line with other countries, s will be able to look forward to an era of great progress and dev lopment comparable with the progress of the United States America. This fact influenced your Directors to seek your approv to increase the Bank's capital in order that they could plan f the future on sound progressive lines.

I have much pleasure in moving the adoption of the Report a Balance Sheet.

Gordon & Gotch (A'asia) Ltd.

Advertising Agents, Wholesale Magazine and Periodical Distributors, Paper Merchants, Stationers and Booksellers.

Reg. Office: 511 Lit. Collins St., Melb. **'Phone:** MU 7411. **Directors:** G. Sutherland Smith (Chairman), S. W. Byrne, H. C. Fahle, W. E. Jackson, T. F. McMullen. **Auditors:** Wilson, Bishop & Henderson.

Year ended March 31, 1953. Meeting June 23, 1953.

In a year of difficult trading, profit was £47,000 lower at £238,473. Ordinary dividend was raised by 2½% to 22½% on the occasion of the company's centenary.

*Include £125,241 revaluation of Australian land and bldgs. in 1951; £24,759 revaluation of land and buildings in N.Z. in 1951; debited with £150,000 for bonus issue in 1951.

†N.Z. figures consolidated at rate of £A100 = £100 N.Z.

The New Zealand subsidiary did not declare a dividend to the parent company, the whole of its profits being left in that Dominion.

Import restrictions substantially reduced sales, but the regulations covering magazines and books were eased in June, 1952. Lower prices for overseas paper necessitated the writing down of stocks at balance date.

Future prospects, particularly for Australian publishing, are encouraging.

Will ready cash be there to pay DEATH DUTIES?

WHEN a man dies, the first need of his dependents is cash with which to pay Death Duties.

Unless cash be available, some of the assets must be sold to raise the money, and hurried selling of property and other holdings often means selling at a loss. The better way is to arrange for payment with the proceeds of an A.M.P. Policy specially earmarked for that purpose.

Through the A.M.P. you can arrange that your dependents will have the cash with which to pay all such dues without any loss to the Estate.

Have you made such arrangements with the Society?

Ask the nearest A.M.P. office to give you details.

A.M.P. Society

The Commercial Banking Co. of Sydney Ltd.

Head Office: 343 George St., Sydney. **Melb. Share Register:** 257 Collins St. **'Phone:** C. 803. **Directors:** E. R. Knox (Chairman), D. R. Lysaght (Deputy Chairman), R. J. Vicars, C.B.E., E. W. Street, G. B. Kater, A. H. Dickins. **General Manager:** A. S. Osborne. **Auditors:** A. M. Cowper; H. W. Mackisack.

Year ended June 30, 1953. Meeting August 18, 1953.

Profit rose by £27,000 to return 9.9% on capital, and dividend was unchanged.

	1953.	1952.	1951.	1950.
Profits after provn. for contingencies	£470,625	£443,843	£451,698	£426,542
% to capital	9.9	9.4	9.5	9.0
% to av. funds	4.9	4.6	4.8	4.6
Dividends—8% (I. & F. 4)	379,121	379,121	379,121	379,121
W/off bank premises	25,000	25,000	25,000	25,000
Reserves and undiv. profits	4,914,886	4,848,382	4,808,660*	4,487,376

*Incl. £273,707 tax refunds in respect of profits derived during 1939-49.

Advances were £3 million lower at £73 million, due to a reduction in the volume of imports.

Deposits were £17 million higher at £190 million reflecting in part the increased proceeds of the wool clip and some expansion of central bank credit.

Special account with the Commonwealth Bank rose by £7 million to £41 million.

In addressing shareholders at the Annual Meeting on August 18, the Chairman, Mr. E. R. Knox, said:

The Coronation of Her Most Gracious Majesty Queen Elizabeth II on June 2nd last, was acclaimed throughout the British Commonwealth with high hopes that it will mark the beginning of a new era of successful endeavour. I am sure the shareholders and the staff of this bank would wish me to express our loyalty to Her Majesty and our hope that her reign may be a long and happy one.

The signing of an Armistice in Korea is, we hope, the first step towards peace in that war ravaged country and relaxation of international tension.

Balance Sheet

Comparing the figures in the balance sheet now before you with those of a year ago, Paid-Up Capital is unchanged at £4,739,012/10/-, and Reserve Fund has been increased by a transfer of £50,000 from Profit and Loss Account to £4,700,000.

The item Deposits, Bills Payable and other Liabilities, etc., has grown from £173,217,000 to £190,506,000, an increase of £17,289,000 and reflects in part the increase in the proceeds of last year's wool clip and some expansion in central bank credit.

There is an increase of £488,000 in Balances due to other Banks which stand at £1,678,000, but this has no particular significance.

Turning to the other side of the balance sheet, the item Coin, Bullion, Notes and Cash at Bankers is £301,000 higher at £15,430,000. Money at Short Call in London has increased from £156,000 to £1,281,000.

Special Account with the Commonwealth Bank of Australia is £6,800,000 higher at £41,400,000.

The item Cheques and Bills of other Banks and Balances with and due from other Banks has fallen from £6,002,000 to £4,101,000 but this too, has no particular significance.

Our holding of Treasury Bills has increased from £10,000,000 to £19,000,000 and our holding of Government Securities has also increased from £25,463,000 to £31,598,000.

Bills Receivable and Remittances in Transit at £13,091,000 compare with £11,407,000 a year ago.

Loans Advances and Bills discounted have fallen from £76,272,000 to £73,154,000 and reflect the easing of the strain caused by the heavy volume of imports in 1951/52.

The item Bank Premises, Furniture and Sites has increased by £172,000 to £1,399,000. The business of many of our branches has outgrown the accommodation available and rebuilding or costly alterations and additions are necessary. We hope too, to build new premises in London where our need is urgent. A bombed site has been secured at 27/32 Old Jewry and our architects have prepared plans for an attractive building, which must wait however, until the necessary building permit is available.

All other Assets have again contracted and now stand at £1,586,000 compared with £3,938,000 last year, due principally to reduced imports.

Profit and Operating Costs

Our Profits are £26,781 better at £470,624. The abolition of Federal Land Tax was a pleasant contrast with the continuing increase in all costs. It is unnecessary, no doubt, to remind you of the onerous burden taxation imposes. In addition to income tax, which is unduly heavy, payroll tax has increased proportionately with each increase in salaries and wages. These imposts now constitute a penalty for successful trading and a levy on employment. Unhappily, shareholders receive no rebate for the taxes levied on the bank's profits, but on the contrary, are unjustly required to pay tax on the dividends they receive at the full graduated rate applicable to their incomes.

Municipal rates are rising steadily, and in some cases fast assuming the proportions of a rental of one's own premises.

Financial Conditions

The past year saw a welcome check to the rapidity of the inflation which has been a very disturbing feature of the post-war era, although the basic wage, computed on prices, still continues to rise. A larger wool clip at higher prices helped to maintain business turnover and increase employment. In recent years bountiful seasons and rising prices for our exports have favoured Australia and tended to obscure the weakness in our cost structure.

Overseas commodity prices are now falling and many of our products are too dear to export. Australia depends upon a substantial volume of exports to pay for commodities not available in this country, and a reduction in our cost structure is fast becoming a national problem. No country can suffer a reduction in its external trade without impairing its standard of living.

A high standard of culture and comfort is available only to an advanced community which earns it. A combination of capital, plant, management and labour working efficiently in harmony, free from irritating and frustrating restrictions, is essential. The results of such combined efforts will increase the individual output which can be exchanged, on a competitive basis, for the requisites to maintain, and even raise, the standard of living. Unless we reduce our costs and increase the efficiency of our production we cannot earn the funds necessary to purchase the goods and services required for maintenance of our present standards.

Banking Legislation

The Commonwealth Government amended the Banking Act and the Commonwealth Bank Act early this year. Welcome relief was given from some onerous provisions in regard to Special Accounts and to penalties.

Under the 1945 Act an enormous uncalled liability to make deposits to Special Accounts had accrued. In addition, the banks depended, not upon statutory rights, but upon the goodwill of the Central Bank to secure release of funds already deposited in Special Accounts. The uncalled liability has been removed and a statutory obligation placed upon the Central Bank to make releases from Special Accounts if deposits fall.

The amended legislation provides that the Central Bank may call upon banks to lodge in their Special Accounts seventy-five per cent. of any increase in their deposits. In a period of continuing inflation with rising prices, this provision could unduly restrict the expansion of bank lending necessary to meet the legitimate needs of the business community. A system requiring lodgment of a percentage of total deposits, with restraint on excessive calls, would have more merit.

The Government did not see fit to establish a separate Central Reserve Bank. On the contrary it has placed upon the Board of the Commonwealth Bank, of which the Governor is Chairman, the onerous duty of directing and supervising a variety of activities which in particular circumstances will conflict. Perhaps it was too much to hope to attain a perfect system without more experience

d further development of the technique of central banking, but oner or later the obligation to preserve the stability of the cur-ncy, will reveal the necessity for complete freedom of the Central nk from other banking activities.

Primary Production

During the year ended 30th June last 3,851,000 bales of the 52/53 clip were received into brokers' stores in Australia, com-red with 3,359,000 bales for the previous season. The average ice of 81.8 pence per pound of greasy wool was 9.4 pence higher an for the 1951/52 season, and total proceeds of wool sold during e year were £96,969,000 higher at £404,756,000. Sheep numbers ve increased since 31st March, 1952 when they totalled 117,647,000.

The acreage sown to wheat for the 1952/53 harvest was the vest since 1925/26, excluding the war years; however, a record erage yield per acre resulted in 193 million bushels being har-sted from a little over 10 million acres, compared with 160 million shels from 10¾ million acres for the 1951/52 harvest. Favourable owing conditions in the north western area of New South Wales ntributed substantially to this result. An increased area was eded for the coming season but weather conditions have been favourable.

Production of raw sugar at 948,021 tons during the year 1952 s a record and realised £40,420,000 compared with £25,585,000 m 744,849 tons in 1951. Crushing for the current year has com-enced and production is expected to exceed substantially, that last year.

Dried fruit output of 94,000 tons for the year 1952/53 was a good covery from the low production of 69,000 tons of the previous ar.

Butter manufactured during the twelve months to 30th June, 3 amounted to 163,500 tons compared with 131,500 tons for the evious year, a material increase. It is estimated that the whole lk output for the year was 143 million gallons greater than the 56 million gallons produced during 1951/52.

Meat production improved during the year and comparative ures are: beef and veal estimated at 625,000 tons for the year 52/53 against 584,700 tons for 1951/52; mutton is estimated to ve increased by 29,000 tons to 200,000 tons and lamb production timated at 140,000 tons for the year just ended compared with 5,900 tons for 1951/52.

Building and Overseas Trade

The number of houses completed during the last year compares vourably with the previous year but there has been a decline in the number of new buildings commenced. Heavy costs and retention of rent controls are deterring home construction.

Exports for the year 1952/53 were valued at £872,300,000 compared with £675,000,000 in the previous year; wool was the outstanding feature of the increase.

Imports, which during the year ended 1951/52 aggregated £1,053,400,000 and threatened to disrupt our economy, fell to £514,100,000 during the past year.

The trade balance showed a surplus of exports over imports each month and the overall surplus for the year was £358,200,000, compared with a deficit of £378,400,000 during the previous year. This very material improvement in the balance of trade has permitted progressive relaxation of import restrictions.

Secondary Industry

Secondary industries generally experienced better conditions during the year but are preoccupied with rising costs at home and falling prices abroad. The problem of providing adequate depreciation to replace plant at high prices is unresolved.

Overall business activity, which was at a low ebb last year, has improved. Figures for retail sales, production and employment seem, with some exceptions, to have stabilised at a satisfactory level. The effect of the gradual lifting of import restrictions may cause some further disturbances in our economy.

A dry autumn gave rise to concern for the coming year but useful falls of rain in the early part of this month have improved prospects and, if further falls are received in the near future, will warrant hopes for a satisfactory season.

We have, at last, managed to house our Queensland Inspector and his Department in Brisbane Office. This became effective last March, and is proving most satisfactory.

Provident Fund

When we amalgamated with The Bank of Victoria in 1927, the Scheme of Arrangement provided that the Officers' Provident Funds of the two banks should be kept distinct from one another until such time as, after actuarial investigation, the directors considered it desirable to effect a fusion of the two Funds. This was accomplished during last year when the directors agreed to supplement the Victorian Fund so as to bring both Funds into line.

Conclusion

Once again it is my pleasure on behalf of the directors to thank the staff for their loyal and efficient service in another busy year.

The Fidelity Trustee Co. Ltd.

g. Office: 101 Lydiard St. North, Ballarat, Vic. **Directors:** R. Baird (Chairman), C. N. Tulloch, M. W. B. John, O. J. M. Coghlan, F. E. S. Scott, R. H. Ramsay, W. Titheridge. **Auditors:** Evans & Metcalfe.

65th Year ended June 30, 1953. Meeting August 5, 1953.

Gross earnings were maintained at last year's level and a eady profit rate of 7% continued. Dividend was unchanged 5½%.

Net tangible asset backing (book values)—£2/13/8. At test price of 25/- the shares yield £5%.

In his address to shareholders at the Annual Meeting on August 5, the Chairman, Mr. R. Baird, said:—

The Liquid Assets are comprised of sound investments in Loans on Mortgage, Commonwealth Government Inscribed Stock and cash totalling £45,246.

The fixed assets, comprising office premises, furniture and fittings, etc., have a book value of £50,000, giving a total asset holding of £95,246.

The company's freehold premises are in a good order of maintenance, only minor repairs and replacements being required at the present time.

Substantial security is given to our clients by the total funds of the company and its uncalled capital reserve. The shareholders will note that the values of the company's assets as disclosed in the Balance Sheet give a backing of £2/13/8 for each share paid to £1/5/-.

Profit and Loss Account.

Turning to the Profit and Loss Account, it will be seen that the year's net profit is £3,071. This sum, when added to the balance of £5,122 brought forward from the previous year, gives a total to be dealt with of £8,193. An interim dividend of 2½%, amounting to £1,093, was paid out of this last January, leaving a balance of £7,100. Your Directors recommend that this be dealt with as follows:—

In payment of a final dividend at the rate of 3% (making a dividend for the year of 5½%)	£1,313
Leaving to carry forward	5,787
	£7,100

Costs have been held to a greater degree than for some years past, this having been achieved by a combination of savings effected by streamlining procedures in estate administration, together with a strict control of expenses, and an easing off in cost of living adjustments as applied to staff salaries. Nevertheless, that should not give rise to any complacency in relation to expense commitments for future years. There is no real evidence of any substantial levelling off of the cost spiral in the immediate future. Many economists and financial experts predict, on the contrary, an acceleration in the upward trend within the next twelve months.

Your Directors, together with the company's executive officers, are constantly on the alert to minimise expenditure, and it is considered that there is very little scope for the effecting of further economies. This then means that increased expenditure must be met from greater earnings. The inflation in values plus increased new business have enabled the countering of this problem in recent years, but, as in the case of all Trustee companies, with a relatively less margin as each year passes, especially so following the recent easing off in the increase in values.

(Continued on next page)

THE FIDELITY TRUSTEE CO. LTD. (Contd.)—

Increased new business alone is not the answer, because our charges are fixed by statutory control, which has not varied since the company was founded, and therefore do not allow for the increased costs plus the greater services which are now required in comparison with past years.

The whole question devolves itself to the fact that Trustees' fees must bear a proper relationship to the cost of services performed, so that the public will be assured of the service it should receive, the shareholders paid a fair return on the moneys invested in the business, and the members of the staff adequately remunerated for performing their exacting duties.

This matter has received the attention of all Trustee companies in Victoria, and representations on their behalf have been submitted to the State Government that the statutory provisions relating to charges be amended to provide for an increase in fees similar to those which are now operating in other states. Your directors are hopeful that these representations will receive sympathetic consideration by the Government at an early date.

I feel it incumbent upon me to stress it is intended that any increase in fees will apply only to future business, and not to any business entrusted to the company prior to any alteration in the relative Statutes.

New Business.

I am pleased to advise that the trends of new business indicate an increasing measure of goodwill throughout the whole of Victoria.

The total new business recorded during the past three years has almost doubled that recorded for any previous similar period in the company's history.

Notifications of new will appointments continue to be most satisfactory.

Every office of the company has contributed substantially to the successful results achieved.

Directorate.

The company sustained a great loss during the year in the pas ing of Mr. C. N. Tulloch. His wise guidance, sound financial sen and genial personality is sadly missed.

I have pleasure in advising that Mr. William Titheridge, who well known to you as a leading business man in this city, w appointed to the Head Office Board of Directors, and Mr. R. Birdsey, who is a leader in business and legal circles in Geelong, h accepted a seat on our Advisory Board in that city.

Staff.

I desire to express the Board's appreciation of the work perform by the management and staff during the year. They have as usu diligently carried out their duties, and by their efforts are buildi up goodwill, which must surely reflect satisfactorily in new busine figures in future years.

Our company prides itself in the personal service which rendered to its clients, and I can assure you that the Staff as a whe fully implements this policy by taking a keen interest in the welfa and problems of the many thousands of beneficiaries in the estat which have been entrusted to our care. The company is continual receiving expressions of appreciation from clients, and others w have dealings with the staff, of the courteous attention and efficie service received by them.

General.

Your Directors and the company's executive officers are co tinually striving to improve our services, expand our operations a build up our goodwill with the public.

We at The Fidelity take pride in the creation of goodwill, being considered by all that good relations begin with a job w done. It is with this principle we go into the future, confident th by following it it will lead us to still greater achievements in the fie of trusteeship.

Draffin Everhot Limited

Manufacturers of Heating Equipment.

Reg. Office: 43 City Road, South Melb., Vic. **'Phone:** MX 5801. **Directors:** A. R. Draffin (Chairman), E. P. Draffin, J. C. Draffin, A. E. Heathcote, J. G. Robert, J. H. Seymour. **Auditors:** Gandy & Skate.

Year ended March 31, 1953. Meeting July 22, 1953.

Although turnover was slightly lower and selling costs were higher, net profit after tax was steady at £18,348 and dividend was again 10%.

	Draffin Everhot and Subsidiary.			Draffin Everhot Ltd.

Latest—14/9; yield, £6/15/7 per cent.

The following report by the Chairman, Mr. A. R. Draffin, w circulated to shareholders with the Annual Accounts:—

Considering the many difficulties encountered by us, also co mon to many other concerns, the turnover for the year, whilst quite as high as the previous year, has been very well maintained.

You will note from the accounts, as submitted, that the net resu are not as high as last year. This is brought about mainly by l turnover and higher selling costs. Even after taking these fa into consideration, I am sure you will agree that it has been a m satisfactory year.

In my report last year it was mentioned that we intended to wi the range of new products. Gas hot water systems—in two siz electric bath heaters and electric sink heaters were the new li produced during the year. New styles and design, hitherto unkno to this market, were incorporated in these models, and sales very pleasing. I will explain later in this report regarding furt new products which will soon be ready for marketing.

Last year we created a provision of £1,000 for doubtful de to cover possible contingencies. I am happy to advise the amo of bad debts for the year was extremely small, and has b accounted for in the Profit and Loss Account. Accordingly, above provision of £1,000 remains intact to meet future contingenc

In conformity with our prospectus, issued at the time of original flotation of this company, a further additional and fi amount has been included in the item of depreciation, in order amortise over a short period, the writing up of depreciable assets.

Dividend.

You will note that your directors have recommended a divid at the rate of 10%. No doubt you will be pleased that this rate dividend has been maintained.

Co-operation of Employees.

I am very pleased to register the directors' appreciation of co-operation and work done by employees during this year.

New Director.

I am very pleased to report that my brother, Mr. J. C. Draffin, Sydney, has been appointed by your Directors as an additional ector to this company. Mr. Draffin was a substantial shareholder Draffin Bros. Pty. Ltd., for 25 years, and now of Draffin Everhot nited. He holds a position of engineering sales manager of Amal-nated Wireless A/sia Limited, and it is considered that, as a mem-of our board, his long and valuable business experience will be st beneficial as a director of this company.

Future Prospects.

New Products: The delmatic low-level flushing cistern is most ractive in design, with an ingenious, yet simple mechanism. We l confident that this will be a most successful line. The develop-ntal stage, prior to manufacture, has now been completed, and oduction is well under way. The volume of orders received is st encouraging.

During the early part of this year an announcement was made t we would venture into the manufacture of slow combustion okers. We are now able to tell you of the progress made to date. At the time, it was intended that we would produce a cooker ng the lines of competitive makes, but after a thorough market survey it became evident that we should produce a model specifically for Australian conditions, embodying many important improvements hitherto unavailable in slow combustion cookers. This somewhat delayed production, but your directors are thoroughly satisfied that such a delay will be more than offset by the high standard of perfection which has been attained.

With the final stages of development now reached, preparations are being hastened to commence production at our Fishermen's Bend factory. We are highly confident of the market acceptance of this cooker, which should prove a venture of some magnitude in this organisation.

Added to our normal hot water service business, these above-mentioned products will be a means of advancing our company to a stage of much prosperity, and your directors are very optimistic for the present year and the years to come.

Taxation.

It is to be hoped that substantial relief from the heavy taxation will be announced in the next Federal Budget, so that companies in general will be better able to plan future expansion and development, at the same time providing more employment.

Food Machinery (Australia) Limited

(Formerly Austral Otis Engineering Co. Ltd.)

g. Office: 85 Hanna St., South Melb. **'Phone:** MX 1237. **Directors:** A. G. Timmins (Chairman), L. C. Davis (Manag. Director), B. C. Carter, A. W. Elwood, Sir Norman Brookes, K.B., E. J. Rigby, Jnr., A. J. Edwards. **Auditors:** G. Marquand & Son.

92nd Year ended June 30, 1953. Meeting August 27, 1953.

Profit was down £1,574 at £38,640, returning 20.2% on ger capital. Dividend was maintained at 8%.

"During the past three months there has been a marked improvement in business conditions, and our workshops are again compelled work overtime in order to maintain deliveries," said the Chairman, Mr. A. G. Timmins, in his address to shareholders at the nnual Meeting on August 27. His address reads:—

The accounts for the year show a net profit of £38,640, a slight crease than that of the previous year. I am sure that shareholders will agree the year's result is satisfactory and that the Company continues to progress despite the prevailing conditions in Australia.

The value of the sales for the year was less than that of the previous year and consisted of Agricultural Equipment, Food Processing Machinery, and General Engineering Products. During the year, we manufactured further items of equipment originating from the designs of our parent Company, Food Machinery and Chemical Corporation of San Jose, California.

From the profit available for distribution of £38,640, £10,000 was transferred to our Special Reserve, thus making the total credit balance of this account £50,000. The amount of the reserves retained in the business is now approximately £164,100, whereas the paid-up capital is £191,244, and I am sure shareholders will agree that our financial position is very strong.

Depreciation on Engineering Plant, Tools and Equipment of £1,800 is in accordance with the rates allowed by the Taxation Department, and as our Plant and Machinery is valued at cost, less depreciation, your Directors are of the opinion this allowance is now adequate for our purposes.

Dividend and Taxation.

From the earnings of the year under review, your Directors declared an 8% Dividend requiring £15,300, such Dividend having been paid on August 12, 1953, which now leaves a balance to the credit of the Profit and Loss Appropriation Account of £56,715. The Dividend is at the same rate as that of the previous year, and has enabled the Company to retain further capital in the business.

The sum of £28,876 has been provided for Federal Income Tax on the profits of the Company for the year, and in the opinion of your Directors, will be sufficient to meet all outstanding tax commitments for the year ended June 30, 1953.

New Issue.

You will recall that the Company issued 95,622 Ordinary Shares of £1 each at a premium of 10/- per share on July 24, 1952, and from the proceeds of this share issue building operations were commenced on a new workshop at Moorabbin for use by our Agricultural Machinery Division. I am pleased to advise that the building is now completed, and this section of our business is ready to operate from that area.

Change of Name.

The name of the Company was changed from Austral Otis Engineering Company Limited to its present title on September 1, 1952, and it has been found that this change has been beneficial, particularly regarding our activities in the Food Processing and Agricultural Machinery fields.

The general engineering section of our business still continues to operate under the title of Austral Otis Division of Food Machinery (Australia) Limited.

Trading Conditions.

During the year under review, due to severe credit restrictions, our turnover was reduced as compared to that of the previous year, however, during the past three months there has been a marked improvement in business conditions, and our workshops are again compelled to work overtime in order to maintain deliveries.

It is with regret that I announce the loss, through death, during the year, of one of our American Directors, Mr. Clarence M. Frazier, a Vice-President of our Parent Company, Food Machinery and Chemical Corporation of San Jose, California.

In accordance with Article 87 of the Articles of Association, Mr. Benjamin C. Carter, Executive Vice-President of our Parent Company, was elected to fill the vacancy.

The Future.

Your Directors feel that the outlook for the future is satisfactory, and it is our intention to manufacture further lines of equipment originating from the designs of Food Machinery and Chemical Corporation, which previously it has been necessary to import from the United States of America. This, as you readily realise, also assists to conserve dollar exchange.

In conclusion, I would like to pay tribute to the staff and employees of the Company for the efforts they have exerted during the year to make possible the results as disclosed in our accounts.

General Motors-Holden's Limited

Reg. Office: Salmon St., Port Melbourne, Vic. **'Phone:** MJY 330. **Directors:** H. E. Bettle, E. C. Daum (Manag. Director), Sir John Butters, K.B., F. P. Callahan, H. A. Cavanaugh, H. A. Diment, G. J. Hill, E. S. Hoglund, J. R. Holden, J. H. Horn, C. R. Lewis, J. R. McKenzie, E. C. Riley, A. C. Wigan. **Auditors:** Harris, Horne, Haskins & Sells.

Year ended December 31, 1952. Meeting August 14, 1953.

Profit rose by £600,000 to almost £4,000,000—a record for the company. On funds employed of £17,292,001 (including £4 million on open account with affiliated companies) earning rate was 22.8%. To conserve funds for expansion, no ordinary dividend was paid.

The 6% preference shares are publicly held, while the ordinaries are held mostly by General Motors Corporation of America. The preference dividend required just over 2d. in each £1 of profits.

In the Annual Report to shareholders for the year ended December 31, 1952, the Managing Director, Mr. E. C. Daum, stated that, although the total number of new vehicles registered showed a fall, the demand for the company's products enabled it to achieve a new sales record.

General Review.

Although the total number of 159,535 new passenger and commercial vehicles registered in 1952 was 37,454 fewer than in the previous year, the demand for the products of General Motors-Holdens Limited increased, and the Company was again able to achieve new sales records.

It is encouraging to note the strength of the demand for the Company's products during a period when buyers were able to obtain immediate or early delivery of many makes of cars and commercial vehicles. Even greater numbers of Holden, Vauxhall and the Company's U.S. and Canadian products could have been delivered had they been available.

During 1952 good progress was made in implementing the Company's expansion programme. This £11 million programme, which was well under way at the end of the year, was designed to—

Lift output of Holden sedans and utilities from 85 a day—as provided in the original Holden programme—to 200 a day late in 1953.

Enlarge the Melbourne, Adelaide and Sydney manufacturing plants by one million square feet, making the Company's aggregate floor space 3,535,017 square feet—or 81 acres—to obtain the increased Holden volume and provide additional capacity for Vauxhall-Bedford, Frigidaire and other General Motors' Products.

Provide for modernisation and re-arrangement of the vehicle assembly plants at Brisbane, Adelaide and Perth.

Increase the efficiency of production of all GMH products and further improve their already high standards of quality.

Details of the expansion programme were released to the Press throughout Australia on November 29, the occasion of the fourth birthday of the Holden, and were widely publicised.

This programme is further tangible evidence of the Company's confidence in the future of Australia—a confidence that is reflected in General Motors-Holden's reinvestment in Australia of more than 80 per cent. of its postwar profits. It also reflects favourably on the ability and loyalty of its more than 10,000 employees, whose skill and hard work have contributed importantly to its success. It is estimated that when the expansion programme is completed, funds employed in the business will exceed £30 million.

An important feature is the tremendous and beneficial impact this expansion will have, directly and indirectly, on all Australian industry. It will be particularly important to the 3,000 Australian firms and industries which have contributed so much to the Company's operations as suppliers of essential materials, parts and services, and will enable them, with General Motors-Holden's, to grow as Australia grows.

Operations in 1952.

Despite the overall reduction in registrations, General Motors-Holden's Limited sold 47,345 vehicles at wholesale to distributors and dealers, an increase of 1,840 units over 1951.

Unit sales of cars, utilities, trucks and buses from General Motors-Holden's plants located in the five mainland capital cities were:—

	1952	1951
Australian—Holden	31,945	25,177
British—Vauxhall, Bedford	10,135	14,915
U.S.A. and Canadian	5,265	5,413
	47,345	45,505

As was the case in the previous year, the gain resulted from th increase in Holden output which, nevertheless, was considerably b low the demand that existed. During 1952, Holden passenger ca registered in Australia exceeded the registrations of any other mak and accounted for 23.3 per cent. of all passenger car registration This, compared with 17.2 per cent. in 1951, is a record of which th Company can justifiably be proud. The Holden utility also outso any other make, obtaining 25 per cent. of the total registrations this type of vehicle. The wide acceptance of both the Holden sed and utility has contributed considerably to reducing the amount overseas exchange required to provide Australia with essential tran portation. Since November, 1948, when the Holden was announce to the end of 1952, the wholesale sales value of units sold h amounted to a little under £63,000,000.

Sales of the Company's British-source vehicles—Vauxhall/Bedfo —were seriously affected by import restrictions imposed by the Go ernment early in the year; therefore, the strong demand which exist for these makes could not be met. This demand was accentuated the introduction during 1952 of the new Velox and Wyvern sedans a several new model Bedford trucks.

Dollar restrictions again limited the supply of American-sour vehicles, the demand for which exceeded availability.

Total sales by the three separate Divisions of General Motors-Hd den's Limited responsible for merchandising the Company's no vehicle products—National Automotive Service Company (NASC automotive parts and accessories; Industrial and Domestic Equipme Company (IDEC), power and industrial equipment; Frigidaire Di sion, household and commercial refrigerators and household applianc —amounted to £8,036,062. This figure is the highest ever record and accounted for 16.2 per cent. of the Company's total sales.

GMH People.

The Company has long recognised that good employee relatio are of great importance not only to the Company but to the employe themselves. Consequently, much attention has been devoted over t years to bringing about a still better understanding between Manag ment and employees. The Company is pleased to report a continuar of good employee relations and high morale in its plants.

Average employment in 1952 was 10,256, compared with 10,164 the previous year. The fact that the Company was able to incre its production with substantially the same number of employees as 1951 is the result, to a major degree, of the added investment £5 million made during the year in plant, equipment, and tooling the purpose of increasing capacity and improving employee efficien

Payrolls totalled £9,265,392, an increase of £1,219,936 over t 1951 figure. Average annual earnings of hourly-rate employe reached a new high of £846, compared with £737 in 1951. The avera weekly earnings of hourly-rate employees was £16.3 compared w £14.2 in the previous year. Average annual earnings of all employ was £903 and the weekly average £17.4—an increase of 14 per ce over average annual earnings for 1951.

The labour turnover rate during 1952 continued to show a downward trend. This was particularly noticeable over the latter part of the year. Labour turnover during the last six months of 1952 was at an annual rate of 23 per cent. Year end records indicate that 78 per cent. of employees on the hourly rate payroll has been with the Company for more than one year. The comparative figure at the end of 1951 was 68 per cent. At the end of 1952, 26 per cent. had been with the Company for five years and over, and 16 per cent. for 10 years and over.

Changing economic conditions have contributed to these results, but they are also due to better understanding and closer co-operation between the Company and its employees in meeting the problems that arise in the sphere of employee relations. General Motors-Holden's accepts its responsibility and believes that its employees are accepting theirs.

Financial Review.

The financial results achieved by General Motors-Holden's Limited during 1952 reflect the increased volume of business. On sales of £49,619,657 the Company earned a trading profit of £3,947,548. This is equivalent to 8.0 per cent. of sales, slightly under the prewar rate. For the seven postwar years 1946-1952, trading profits have averaged 5.9 per cent. of sales, compared with the prewar average 1935-1940 of 8.4 per cent.

GMH received in 1952:—

		%
From Sales of its Products (excluding Sales tax)	£49,619,657	100

These receipts went:—

To Suppliers for Materials, Components, Services, etc	30,041,000	60.6
To Employees for Payrolls and Allied Expenses	9,603,000	19.4
To Government for Customs Duties, Taxes, etc.	5,341,000	10.7
To Provide for Depreciation on Plants and Equipment	687,000	1.4
To Shareholders	34,000	0.1
For Use in the Business	3,914,000	7.8

The important figures for the years 1952 and 1951 are summarised as follows:—

	1952	1951
Net Sales	£49,619,657	£42,481,745
Net Income (all transactions)	4,010,635	3,387,024
% Net Income (including other income or losses) to Sales	8.1%	8.0%
Dividend Paid or Payable:—		
On Preference Shares	33,696	33,696
On Ordinary Shares	—	525,000
Net Income Retained for Use in the Business	3,976,939	2,828,328

Funds Employed in the Business:

At December 31—	1952	1951
Total Working Capital	£16,991,443	£17,655,364
Total Plant and Equipment (Net)	7,997,695	4,407,108
Total Funds Employed	24,989,138	22,062,472

Taxes.

General Motors-Holden's Limited provided in 1952 a total of £4,026,799 for taxes on income. This tax was greater than net income for the year, as for each pound of gross income earned, 10/1 was incurred for income tax, leaving 9/11 net to the Company.

Provision for other taxes amounted to £278,312, including payroll and municipal taxes.

In addition to making provision for the direct payment of taxes for the year 1952, General Motors-Holden's wholesale sales were also responsible for generating a substantial total of other taxes. Sales tax on products sold is estimated at approximately £7,780,000, bringing total ascertainable taxes for the year to more than £12,000,000.

Reserves.

There have been no changes in the reserve accounts, the figure remaining at £444,963.

Holden Export.

As stated when the Holden was announced in 1948, the ultimate export of Holden cars and utilities has been an important part of the Holden project since its inception. The Company had hoped that Holdens would have been exported by this time, or that plans to export would be well advanced.

The Company has been continuously exploring export possibilities, but regrets to state that the outlook is not promising. Costs of manufacture in Australia have increased rapidly over the past four years, and are continuing to increase. If the Holden is to be exported, its cost of manufacture in Australia must be no higher than the cost of manufacture of similar products in other countries—otherwise its landed cost in any export market will not enable it to meet competition. Based on accurate cost comparisons available to the Company, it is obvious that this condition does not prevail at present.

The matter of increasing costs in Australia is one for national concern—one which must be vigorously attacked by all elements of the Australian economy. It cannot lightly be dismissed as a problem of high labour cost, of small volume, or of any other single element of cost. It exists throughout the economic structure, and will require the closest co-operation between Government, Management and Labour if important results are to be achieved.

With respect to factors within its own control, the Company has made satisfactory progress in reducing costs. It is spending large amounts of money on modernising plants and equipment. Through the Company's engineering and manufacturing departments, search is constantly being made for new and better methods. Employees in General Motors-Holden's plants are co-operating admirably. Much remains to be done, and will be done, but a great percentage of the cost of the Company's products is outside its own control, and General Motors-Holden's must depend, therefore, on similar efforts and results throughout the national economy. The problem of cost is one which cannot be stressed too strongly, for unless the current trend can be reversed, the industrial future of Australia must be jeopardised.

Road Transport.

The Company, with many others having wide and varied interests, views with concern increasing restrictions by State Governments on the use of road transport for the haulage of goods of all kinds. The country, with its vast area, and big distances between main cities, needs all forms of transportation—road, rail, sea and air—and its interests can best be served by allowing each of them to develop in its natural sphere of activity, and by allowing shippers to choose the type of transport best suited to their individual needs. The competition of one form of transport with another, furthermore, is a proven means of increasing efficiency in all.

Conclusion.

The year 1952 was one of adjustment generally but, as evidenced by its current investment programme, the Company has complete confidence in the long-term future of Australia. It feels, however, that the near-term future is more uncertain, due largely to the factors of production costs mentioned earlier. It believes the country can overcome these problems if they are vigorously and courageously faced in the common interest, and it pledges itself to do its part towards this end.

Dennys, Lascelles Ltd.

Wool Brokers, Stock and Station Agents.

Head Office: Moorabool St., Geelong, Vic. **Directors:** E. T. H. Richardson (Chairman), A. C. Fisken (Deputy Chairman), C. C. Seymour, S. C. Burston, D. W. Hope, A. J. H. Gray, R. A. Cook. **Auditors:** Flack & Flack.

41st Year ended June 30, 1953. Meeting August 27, 1953.

Wool, which is the company's principal source of revenue, maintained an upward trend during the year, and more bales were sold, bringing profit to £110,490 (up £35,348), and dividend was again 15%.

At the Annual Meeting of Shareholders held in Adelaide o June 24, the Chairman, Mr. A. L. Slade, said—

The accounts and report for the year ended March 31, 195 have been forwarded to you and no doubt you are familiar wit them. This was our twentieth annual report and I am sure yo will agree that it reveals a satisfactory position. The results o the year's trading as set out in the consolidated accounts, leav a profit of £147,608 after providing for taxation on the curren year's income. This profit is £2,786 higher than for the previou year which is in itself satisfactory, because of the fact that sale for the year were slightly lower than for 1951-52, but the mos pleasing feature disclosed by the accounts is the substantial im provement in the liquidity of the company's assets. At the end o March, 1952, the consolidated accounts revealed a bank overdraf of £402,367, and amounts owing on bills payable accepted to cove overseas purchases totalled £208,420. At the end of March, 1953, thi position was changed to a bank credit of £240,564 and the bills pay able were reduced to £8,891. Portion of this recovery was due t the additional capital subscribed in November last, but the majo improvement resulted from the substantial reductions effected i inventories and sundry debtors.

Reserves.

In conditions where competition is keen, financial strength i essential. The improvement in this direction during the past yea is therefore significant. Although a policy of reinvesting profits i the business has been followed in the past, high taxation has pre vented the Directors from building up our reserves to the exten they considered desirable. You will note that the dividends re commended for the year are at 10% per annum for the ordinary stock, and the prescribed rates for the preference stock. The trad ing result for the year, together with the surplus taxation provisio last year, has increased the company's reserves by £121,908 afte providing for the payment of the above dividends. A further addi tion to reserves of £11,250 resulted from the premium paid on the recent share issue. The cost of the issue has been charged agains the year's expenses. We are confident that you will endorse the Board's action in thus providing for the future stability of the company.

Manufacturing and Trading Conditions.

In line with our policy of continually improving and expandin our production facilities, we have spent £173,000 during the yea on the purchase of high grade precision machine tools, other equip ment, and buildings. We are still in close touch with the Common wealth Government and are prepared to play our part in any de fence programme for which our facilities are suitable.

The Directors are fully aware that the sales of our product depend on our producing quality articles at competitive prices and are pleased to report that during the past year a substantia improvement in the efficiency of our manufacturing plant wa effected, thus permitting us to absorb the increases in wage rate and raw material prices that occurred during the year without in creasing the price of our products. Intensive efforts will be mad again during the current year further to reduce costs as we ar alive to the fact that as a general rule the cost structure in Aus tralia is higher than in many other countries.

During the year the demand for Wayne Pumps was reduce following the completion of the change over to electric pumps i the major States of Australia. The call for these products has no settled down to a lower level that is more in keeping with norma requirements, but we are benefiting from the increasing deman for Wayne spare parts.

At the beginning of April we released sealed refrigeration unit and systems for use in commercial installations. We believe thi will increase our contribution to the Government's drive to expor more primary products by assisting in the preservation of perishabl commodities. These products have been developed in line wit the designs and specifications of the large overseas corporation with whom we are linked. The same approach is being made t the new models and products being developed, and we are confiden that by using the wide experience and research facilities thu available to us, we will avoid many of the difficulties normally ex perienced in developing new products.

Overseas Affiliations.

In October last year, we were favoured with a visit from Mr Howard Lewis, Vice-President, and Mr. E. H. Wilcox, Expor Manager, of Nash-Kelvinator Corporation. Mr. Lewis expresse his satisfaction at our progress and as a result of the discussion that were held during this visit we believe that the already strong ties between our company and Nash-Kelvinator Corporation hav been strengthened.

Negotiations with Whirlpool Corporation of St. Joseph, Michi gan, U.S.A., for the exclusive rights to manufacture and distribut their products in Australia have continued during the year. Ou Manufacturing Manager has been at St. Joseph collating technica information that will assist us. It is hoped that we will be in a position to announce the introduction of these important addition to our range of products during 1954.

Let a Burroughs solve your figure problems!

BURROUGHS "MEMORY DIAL" CALCULATOR

Remembers what other calculators forget

CALCULATES IN STERLING

Cut calculating costs 15 to 40%

The revolutionary "memory dial" accumulates the results of individual calculations in L.S.D.—gives a grand total or net result automatically. Eliminates time-wasting rehandling of figures! Careful checks have shown a saving of 15% to 40% of calculating costs.

Call the Burroughs man. Arrange for a demonstration of this remarkable machine. Continuous and efficient operation is assured by Burroughs world-famed service plan.

The company holds the New South Wales franchise for Austin products, and also handles an extensive retail and wholesale business in parts for Austin vehicles.

Stocks fell by 60% during the year, but it was not necessary to call on the provisions which had been set aside for possible revaluation. Last year's overdraft of £1,180,000 has been converted to a credit balance of £127,822 partly by the disposal of £500,000 Commonwealth Loans.

The effect of import restrictions has been to a large degree offset by the expansion of Austin body building facilities in Australia.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £33/16/1; 5/- ord., £1/12/10.

Turnover only slightly less than the previous year's record was eported by the Chairman, Mr. J. H. Tweeddale, at the Annual leeting held on July 15. His address reads:

The Directors' Report and financial statement of your Com- any for the year which ended on March 31 last discloses steady evelopment, despite the disturbed economic and trading condi- ons prevailing for a considerable period of the year, and of which, the textile industry generally, shareholders and the public were lly aware.

It is a pleasure to inform shareholders that the outstanding cts in the year's activities, notwithstanding difficult trading con- itions, are that the year's turnover of £945,000 was only £47,000 ss than the turnover of the previous year—the highest in the ompany's history—accounting for a production of nearly three nd one half million garments—and as shown in the balance sheet, e net profit, after making all necessary provisions, including the m of £33,000 for income tax, was £29,526.

As mentioned in the Directors' report, the Company and its aff were fortunate in that during the year, despite a diminished oduction, it was not found necessary to dispense with the ser- ces of any of its permanent employees.

Balance Sheet.

Shareholders will on this occasion expect a brief survey of the lance sheet in their possession. Before doing so, however, I ould like to say that the experiences of the past year have mply justified the conservative policy pursued by your Direc- rs for the past twenty years, and shareholders are now reaping e benefit of that policy, in that the industry is established upon und foundations, shown by the fact that its funds possess a gree of liquidity second to none.

Turning to the figures given in the balance sheet, on the abilities side it will be seen that the paid-up capital is now 86,186, and that the total funds amount to £506,749.

The total current liabilities of the Company, including £33,000 ovision for income tax and £18,618 for proposed dividend, amount £88,764.

Regarding the assets of the Company, notwithstanding the nsiderable value of the organisation's registered brands and odwill, these intangibles do not appear in the balance sheet. The ysical assets are classified into two main classes, namely, the uid or current—consisting of cash, deposits, debts due to the mpany and stock, the total amounting to £397,057; and fixed sets, consisting of shares, property and plant and machinery, rniture and fittings, totalling £243,456.

Shareholders will be interested to note that against the liquid current assets of £397,057, there are only £88,764 of current abilities, such assets to liabilities being a ratio of 9 to 2.

This aspect of the Company's affairs, I suggest, compares vourably with any textile industry in the Commonwealth.

Reviewing the balance sheet variations, it will be noted that e cash position of the Company has immensely improved during e year. The liability of £58,223 to the Commercial Banking Co. Sydney Ltd., at March 31, 1952, has been liquidated, and as own, there is now a credit balance of £18,685. Sundry debtors, ported as £129,997 on March 31, 1952, are now reduced to £114,928.

Stock on hand was reduced by £91,045, and now stands at 48,465. As stated in the Directors' report, there have been con- derable fluctuations in costs of basic materials consumed by the dustry.

The Company's property, which is extensive, consists of—

) Mill at Maryborough.
) Land at Maryborough for new mill.
) Annexes at Dunolly, Talbot and Avoca.
) Land at Avoca.
) Avoca (disused) Power House.
) Three Dwellings at Maryborough, one at Avoca and one at Dunolly,

d is conservatively valued, as also are the plant and machinery d furniture and fittings, which were added to during the year purchases amounting to £11,042.

It is worthy of note that your Company has one of the largest not the largest) circular underwear plants in the Common- alth.

Trading Result.

In accordance with my usual practice, I present to share- holders details of how each pound of the Company's receipts has been distributed during the past year:—

Material	11/7
Wages and Salaries	4/11¼
Freight and Other Items	2/–
Taxes	10d.
Dividends	4¾d.
Reserves	2¾d.
	20/–

and it is appropriate to again mention that the Commonwealth Government is the largest beneficiary from the operations of the Company, and, of course, as you know, they have preferential rights to the payment of their proportion of the net profits before shareholders participate in a dividend.

Orders in progress and on hand are substantial, and the volume of this work is sufficient to maintain the factory in full produc- tion until the end of the year.

At the last annual general meeting I referred to the dangerous inflationary trend then existing, and warned shareholders of the necessity to take adequate precautions against a recession. This can only be done by the creation of substantial reserves to protect the shareholders' capital and to preserve profits, and it is, I think, obvious that in the accumulation of reserves they must be in such a form as will make their immediate availability possible should any critical period occur. This is particularly the case when reserves are used in the development of the industry, or in investments outside the undertaking. It is of little use to have large reserves if they cannot be readily available to meet pressing emergencies.

It appears to me that it is the bounden duty of all industry during these difficult days, when the price level has advanced to such a marked degree, to make every effort to reduce costs, and as far as possible to absorb increased costs, even at the expense of net profits. Such action will tend to assist the national economy to become stabilised by maintaining employment, purchasing power and the standard of living. This, I might add, has been the sus- tained policy of your Board.

The foregoing comments disclose that there are ample grounds for confidence in the future of the industry, which is staffed by executives and operatives at Maryborough, Dunolly, Talbot and Avoca, who are devoted to their work and who, in most instances, regard their employment as being a vocation and not just a means to the end of securing a livelihood.

Interknit Hosiery Co. Ltd., Clunes.

As stated in the Report last year, this industry passed through a difficult period. It is now recovering, and having regard to the existing circumstances, I feel justified in stating that there are grounds for satisfaction with the progress made. The Directors of Interknit Hosiery Co. Ltd. are fully conscious of their respon- sibility to the people of Clunes by endeavouring to maintain as high a level of employment as possible, even at the expense of profits.

M.K.M. Employees' Thrift Club.

During 1952, employees deposited with the Thrift Club a total amount of £23,920. The Thrift Club pays interest at the rate of 3d. for each pound deposited, and the difference between this rate and that allowed by the State Savings Bank is subsidised by the Company.

Conclusion.

In conclusion, it is my pleasure to express to the members of the staff and all associated with the industry, the Directors' appreciation of their loyalty and their consistent efforts and ser- vice in the industry's interests throughout the year—and share- holders will be pleased to learn that this will be expressed in a bonus distribution in which all employees participate.

In addressing shareholders at the Annual Meeting held on June 18, the Chairman, Sir Edwin V. Nixon, reported that despite the general trade recession, turnover increased by 16 per cent. over last year's record. His address reads:

Before we begin our business, I should like to place on record our regret for the loss we have sustained by the death of our late Managing Director, Mr. John Walcott Derham. His inspiring courage, leadership and outstanding ability were known to all of us, and our company, which he did so much to build, may be regarded as his monument. However, his interests were not entirely restricted to this company—he played a great part in the development of the plastics industry in Australia, and was well known and highly regarded in Great Britain and the United States of America. The example he set us will inspire us with determination to continue to build soundly upon the foundations which he laid so well.

Accounts.

The accounts have been prepared in our standard form and are, I think, clear and informative, but I would like to refer to some significant charges and results. My references will be to the consolidated accounts and not to the accounts of the holding company.

The trading profit for the year, after charging interest and directors' fees, but before charging depreciation, was £259,239, to which must be added other income of £717, making a total of £259,956. This is a decrease of £4,366 on the comparable figures of the previous year, and having regard to the sudden and severe recession which affected commerce and industry generally for a large proportion of last year, the Directors consider this result to be very satisfactory.

Depreciation written off amounts to £53,746 compared wi £66,224 in the previous year, and this smaller provision is attribu able to the cessation of the 40 per cent. initial depreciation allo ance under the Income Tax Act. Net profit on trading was ther fore £206,210 compared with last year's result of £198,098.

From the net profit, £87,204 has been provided for taxatio The amount available is therefore £119,006 as compared wi £98,503 in the preceding year. We have transferred £25,000 general reserve, and dividends paid or payable will require £83,50 Adding to the remainder the balance of £3,247 brought forwa and £860 profit on sale of surplus assets, £10,690 has been carri forward.

This creditable result has been achieved in the face of ma difficulties. I have touched on possibly the most important of the in my reference to the trade recession and this, together wi ever-increasing wages and operating costs, has made caref management and control most necessary.

Turnover increased by a further 16 per cent. over our reco of 1951 in spite of these difficulties, although our greater operati costs more than absorbed the profits of these increased sales.

Current Assets.

Current assets at balancing date aggregate £1,539,190 as co pared with £1,500,373 in 1951 and, although the difference is sma it is interesting to note that our stocks are lower by £164,159 b that book debts have increased by £159,717 mainly because of t increased turnover.

Fixed Assets.

Fixed assets during the year under review increased by amount of £229,101 and, after making allowance for the depreci tion charge of £53,746, show a net increase of £175,355. This

ease is larger than normal but, with the introduction of embssed and printed Nylex film and sheeting and the furtherance our plans to increase the range of our Wire and Cable business, nsiderable capital expenditure was necessary. During the year e purchased a further large tract of land adjacent to our Menne factory under the terms of our original option, and we are corporating this land in our immediate plans.

Liabilities.

Current liabilities, including provision for taxation, have ineased by £88,218 to £845,537 and, although our bank overdraft s been reduced by £104,976, this was more than absorbed by an crease in trade creditors and provision for dividends on increased pital. Liquidity, I might say, improved rapidly in the early weeks the current year.

Shareholders' Funds.

Shareholders' funds, at balancing date, were £1,066,289 as ainst £947,204 in the previous year. This increase includes an crease of £59,043 in reserves and undistributed profit, which now and at the satisfactory figure of £298,518, and represent approxiately 7/9 for each £1 of paid-up capital.

Manufacturing Units.

The policy of the Board in regard to the specialisation of anufacturing units was fully vindicated during the year. The sults were satisfactory and the respective production programmes d results being achieved this year are most heartening. During 52 we acquired the engineering business of W. F. Birch Pty. Ltd. r a consideration of 18,500 ordinary shares, and this has proved ry satisfactory.

Distribution.

In furthering the policy of the Board to obtain complete cover-e of our markets and give the best possible service to our cusmers, the staffs of most of our wholly-owned selling subsidiaries ere built up further during the year. We consider the results obined by these units most gratifying, and I would like, at this age, to extend our thanks and appreciation to the managers and aff for their efforts and co-operation.

Development.

In this ever-changing virile industry, development is one of r most important responsibilities, and I am pleased to be able tell you that your Board considers we are particularly well dowed in personnel and facilities in this important field. I cant over-rate the importance of this group in your company as ained and experienced personnel such as these directly influence e progress of our whole undertaking. Financial resources and, some extent, expensive plant and equipment, will not achieve results in plastics manufacture without infinite knowledge of the techniques required and the "know-how." To these specialists we also extend our thanks for a good year's work, and I would like to assure them that the Board will continue to pursue its policy of allocating sufficient funds for their work, also for the further visits of selected personnel overseas in quest of even later trends and developments.

Taxation.

I mentioned earlier the effect of the present high incidence of taxation upon a young growing industry such as ours in that approximately 50 per cent. of the profits are absorbed by Government revenue. This state has existed for the past fifteen years and followed fairly closely the period of depression towards the end of which this industry was established. Other industries of our magnitude have, in the main, had many years of development and growth unhindered by high taxation and, as a result, have been able to achieve a degree of financial stability without affecting the reasonable returns which the investing public expect, or calling upon shareholders continually to provide the capital necessary for expansion. I am afraid that, while current taxation rates are maintained—and I cannot see any material reduction in them in the near future—we must continue to ask our shareholders to maintain their faith in our future and our management, and support our plans with additional capital.

Internal Directors and Associate Directors.

I would like to express my appreciation of the assistance the internal members of the Board have been to your company during the year, and to thank them very sincerely for their help, enthusiasm and particularly hard work, the results of which are borne out by the accounts on which I have commented today. With the tragic loss of Mr. Derham to which I referred at the commencement of this meeting, their lot will be even more arduous and exacting in the future, but the Board has the fullest confidence in their individual and collective ability to keep your company progressing on sound forceful lines.

Staff.

As always in our organisation, the staff has continued to give loyal and efficient service to the Management, and their efforts are also reflected in the successful results that have been achieved. I would like to extend to them my sincere thanks for those unselfish efforts and ask them to continue in the same way in the future.

Conclusion.

In conclusion, I would like to report that the results of the current year to date have been most satisfactory, and we are looking to the future with confidence.

Speedo Knitting Mills (Holdings) Ltd.

Agencies are held for British and American electrical goods, mining, lifting and engineering equipment. In recent years a substantial part of the group's profits has been provided by manufacturing subsidiaries—£82,005 this year and £56,158 in 1952. These are—

Ogden Industries Pty. Ltd.—Engaged in the production of builders' hardware, including locks of various types and lawn mowers, garden items, electrical accessories, steel flooring and hypodermic syringes.

Australian Die Castings Pty. Ltd.—Manufacturers of zinc base and aluminium die castings, mainly for products of Ogden Industries.

Metalex Pty. Ltd.—Produces extruded brass and copper rod and sections.

Prospects for subsidiaries are referred to in the Chairman's Address reprinted below.

In his address to shareholders at the Annual Meeting on July the Chairman, Sir Edwin Nixon, said—

The year under review was one of rapidly changing conditi which affected mainly the business of the parent company. Ow to financial restrictions, Governments and public utilities sever restricted their purchases and sought to cancel or defer deliver of orders that had been placed. Some of them set up dispos departments to liquidate their excess stocks, thus virtually enter into competition with the traders from whom they had purcha these. Merchants generally were over-stocked and during the ea part of the year were more concerned to reduce their sto than to add to them. The introduction of import licensing restric the supply of imported goods and compliance with the formalit associated with this measure involved us in substantial additio costs. Because of these conditions the sales and net profits of parent company were lower. To some extent, however, our su sidiary companies derived some benefit from import restrictio Their activities and turnover expanded and the increase in th net profits exceeded the reduction in that of the parent compa

Profit and Appropriations

The consolidated net profit of the year was £288,821 whi exceeds that of the preceding year by £12,053. Having regard the difficult trading conditions prevailing during the year t result must be regarded as very satisfactory.

After providing £132,000 for taxation, the amount available transfer to the Appropriation Account was £156,821. This was creased by £308 being the interest in the undistributed profits of subsidiary attributable to a minority holding purchased. Transf to general and stock fluctuation reserves amounted to £70,000, a the interim and final dividends to £87,587. These appropriatio reduced the balance carried forward by £458.

Balance Sheet

When reviewing the accounts for the year ended April 1952, at our previous Annual Meeting, I pointed out that both o stocks and trade debts were abnormally high for reasons whi I gave. During the year these assets have been reduced by £307,1 and this reduction is reflected in our liabilities. At April 30, 19 our bank overdraft and trade creditors amounted to £612,483. our latest balance sheet trade creditors amounted to £291,052 a the bank overdraft has been converted to a credit balance of £98,3 The net reduction in these creditors is therefore £419,816. Provisi for taxation is higher by £35,870, but this is due mainly to t fact that assessments for tax payable on the profits of the previo year may not be due for payment until after the date of o accounts. Because of the increased capital the provision for fi dividend is higher by £8,025.

The excess of current assets over total liabilities, includi provisions for taxation and dividend, is £644,938, so that for eve £1 we owe we have current assets of approximately £1/17/9.

The marked improvement in liquidity is perhaps the mo striking feature of the accounts.

During the year, £63,409 was expended in fixed assets and t depreciation written off in the same period was £19,892. The redu tion in the provision for depreciation was due to the aboliti of the initial allowance.

Paid-up capital increased by £47,177. Of this, £46,427 came fr a call of 5/- per share on the partly paid shares and £750 from t issue of shares at par to the holder of a minority interest in o of our subsidiaries in consideration for the purchase of the sha in the latter.

Appropriations to reserves out of profits of the year aggregat £70,000. Allowing for a reduction of £458 in the balance carri forward, the net increase in reserves was £69,542. Reserves n represent approximately £1/0/6 for each £1 of paid-up capital.

The increase in shareholders' funds for the year is £116,7 At April 30, 1953, these funds amounted to £911,593. For each of the total assets as at that date, shareholders have provided 1 and creditors 7/9.

Properties

Our Hobart premises are rapidly approaching completion a when available should materially benefit our business in Tasman Recently we acquired premises in City Road, South Melbourne, the purpose of concentrating our reserve stocks and controlling a handling these more efficiently.

Subsidiaries

Our subsidiary companies continue to make excellent progre and new projects are continually being developed. Improved ava ability of raw materials and freedom from industrial troubles a reflected in their increased output and profits.

Prospects

The prospects of the current year appear to be favourab The parent company should benefit from the partial relaxation import restrictions. Our subsidiary companies have made a will continue to make every effort to increase efficiency and to r duce costs but it must be recognised that if import restrictio are removed or materially relaxed, they may find it difficult meet the competition of imports from countries where costs a lower.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings. Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

Hosiery and lingerie, including nylon products, are manufactured by the parent company at its East Brunswick factory and at four smaller factories in Victorian country towns. The group also includes the following subsidiaries—

Prestige Fabrics Ltd.—Worsted spinners, weavers and rayon weavers. Preference capital of £100,000 is held by the public.

Loss of £49,475 was due to the continued trade recession which restricted production for most of the year. Turnover increased towards the end of the financial year, and the preference dividend in June, 1953, was paid from profits since April 1, 1953. Recent results have been—

At the Annual Meeting of Prestige Limited held on July 29 the Chairman, Mr. G. G. Foletta, reported on the affairs of the company, stating that consolidated profit was £241,862 higher at £286,027. His address reads:

I feel that a point of interest to shareholders this year will be an analysis of a movement of funds as shown in the Consolidated Balance Sheet. The following funds became available:

Increase in capital		£14,666
Increase in reserves		88,894
Increase in current liabilities and provisions (including additional £72,913 for taxation)	157,100	
Decrease of current assets (including decrease in stock of £371,077)	377,747	
		£638,40

These funds were applied as follows:

Decrease in National Mutual Life Association of Australasia Limited loans, and Commercial Bank of Australia Limited overdrafts	£553,430	
Increase in investments	40,000	
Increase in land, buildings, plant, etc.	44,977	
		£638,40

In the parent company's Balance Sheet, shareholders will be pleased to note that our capital of £1,005,028 is now supported by reserves and unappropriated profits amounting to £889,670.

Prestige Fabrics Limited again made a loss for the year under review amounting to £49,510. This unfortunately resulted chiefly from the unsatisfactory trading conditions brought about by Australia's heavy carry over of rayon piecegoods' importations from the previous year. However, towards the end of the financial year there was a noticeable improvement. Fortunately this improvement is being maintained, and as a result the Directors of Prestige Fabrics Limited were able to pay the dividend for the year ended 31st March, 1953, on the 5% preference capital out of the profits for the period commencing April 1, 1953. I should mention, however, that it is your Board's opinion that the improvement in the business of Prestige Fabrics Limited relies rather too much on the incidence of import licensing. We believe, however, that Australia has realised that to maintain a healthy balance of payments and assure her people and her armies of adequate clothing, it must protect those essential textile industries which were sponsored by the Government and established to clothe the Australian Army and the Australian people during the war and the short supplied post-war period.

Security of Home Market Essential to Industry

From a broad analysis of the financial affairs of those Companies which comprise the Prestige group it becomes very obvious that the highest efficiency and, therefore, the lowest production costs and lowest selling prices are to be found in those of our companies which enjoy sufficient protection to keep them producing to capacity. In this regard and in light of so much criticism of tariffs it is interesting to recall the advice given during 1929 to the then Prime Minister, the Rt. Hon. S. M. Bruce, by a Committee consisting of J. B. Brigden, D. B. Copland (now Sir Douglas), E. C. Dyason, L. F. Giblin and C. H. Wickham. This Committee of leading economic thinkers was set up to advise the then Government on the value or otherwise of tariffs to Australia. The Committee's conclusions were published in 1929 under the title of "The Australian Tariff—An Economic Enquiry." This treatise on tariffs is now recognised internationally as one of the best ever written. One of the important conclusions reached by that Committee was to the effect that efficiency and low cost production could be best assured when the tariffs granted to an Industry were high enough to secure for such industry the bulk of the market. The affairs of the companies within the Prestige Group prove conclusively the soundness of that advice.

Take, for instance, our biggest producing unit—full fashioned hosiery. Tariff protection, since fortified by the anti-dumping regulations issued by the present Government, has secured to Australian manufacturers the bulk of the market, with the result that, with the aid of new high efficiency plant and despite increases over the past three years in the basic wage, which now amounts to over £5/17/0 weekly (including margin for skill), your Company has not found it necessary to raise prices for three years in its bulk business, which is the manufacture of nylon full fashioned hosiery. In fact, the prices of two leading lines have been reduced, and. it is from those sections producing hosiery and lingerie (which are producing to capacity) that practically all of the Company's profits have accrued.

For the same reason, i.e., the assurance over many years of the bulk of the Australian hosiery market, the efficiency, on a man-hour basis, of the whole Australian full fashioned hosiery industry is equal to the highest in the world, including the United States of America. Further, it is recognised both in Australia and abroad that the average quality of Australian full fashioned hosiery is the best in the world.

On the other hand, in those of our subsidiary companies where imports have so far prevented the Australian industry from procuring the bulk of the market, we have found it impossible to reach the requisite low production costs through the difficulties connected with cutting down production and retraining labour when more production is required, etc., and from the fact that the small and varying amounts of business obtainable from time to time have meant that the incidence of overheads on production costs have remained unduly high.

Since import licensing, however, the market has improved considerably, and costs have been reduced and your Board is confident that these subsidiaries can make profits and further reduce costs when adequate tariff protection replaces import licensing.

What applies in these companies in the Prestige group applies to the whole of those secondary industries whose markets are continually at the mercy of imports.

From the examples I have quoted, it has become obvious that an assurance of the bulk of the market to local industry is a prime factor in low cost production. Competition admittedly is another important factor, but most protected Australian industries have plenty of competition locally. To ask them to compete without adequate protection with the "cut throat" competition of imports from lower standard of living countries is to ask the impossible. Such competition, by robbing industries of the bulk of the market, only increases costs.

Balanced Economic Development Assures National Greatness

All Australians agree that speedy development and greatly increased population is essential to our country's security. Increased production of foodstuffs is essential, but no country can develop on the production of foodstuffs alone. It must have its industries. Resulting from the development of industry made necessary by the war and the short-supplied post-war period, Australia got off to a fine start, and was soon absorbing migrants at a rate approaching 180,000 annually. Of course, we ran into all those troubles attendant upon such speedy development. By artificially keeping foodstuff prices down, we rather seriously retarded essential foodstuffs' production, whilst our failure to freeze unduly high and transient export income at its source, brought inflation followed by over-importing and balance of payments troubles. However, in the interests of security, it must be conceded that this splendid post-war development has now become a very valuable national asset, which I am sure the Australian people will allow no Government to destroy.

We must balance our economy admittedly, and we must strengthen those weaker phases which were lagging somewhat behind in the general scheme of development, but, in doing this, we cannot allow the destruction of so much which has been so soundly developed. The economy will get nowhere with the present attitude of "do nothing." We have inflated our costs, but surely to deflate costs there are better means than allowing imports to destroy our secondary industries. To do this, would be the very antithesis of national development. Competition of imports can destroy local production, and the fear of this competition is already seriously retarding development. Imports may give some cheaper merchandise, but can we afford to import unemployment? Imports do not reduce local costs, costs must be reduced at their base, and we can only reduce costs when we reduce today's high level of non-productive employment, put more people on the production line and increase both work and efficiency.

Beware Currency Depreciation

Over-importing can force currency depreciation. Some people believe we should be considering currency depreciation now.

It must be remembered, however, that currency depreciation would place a premium on all our raw materials and essential capital requirements. It may offer some temporary palliative to those industries threatened by imports, but it would be highly inflationary and therefore it would retard our development. Why should national development suffer when tariffs can be used to safeguard local industry?

Wool and its Future

As a practical textile man, I know nothing more dangerous to the future of the economy than to continue placing, as we now do, too much reliance on the uncertain returns from the export of wool. I know the economics of the wool industry from the sheep's back to the finished article, and I believe wool will remain the best apparel fibre in the world. However, I also know the synthetic industry well, and have followed carefully most phases of its growth, and I emphasise that although these synthetics may never be quite as good as wool, the price at which very good wool-like synthetics will be produced, must mean that their competition will severely reduce both the demand for and the price of wool. Just as the growth of rayon has left only the luxury trade to pure silk, so progressively will wool become more and more a luxury fibre. How long this will take nobody knows. Higher standards of living throughout the world may result in the maintenance of reasonably high demands. It would be prudent, however, to anticipate a progressive falling off rather than any increase in Australia's return from the export of wool.

Balance of Payments Problems

Australia will need to keep a very keen eye on likely returns from exports. There would have been no foolish talk about the essential and non-essential industries had we but realised that the high returns from exports generally over the past few years were transient. Today, we see progressive but sure decline in world prices for practically every commodity Australia exports, so much so that it is apparent that no achievable quantative increase in export commodities can maintain an export income equivalent to that which we have lately enjoyed.

It is imperative, therefore, that we realise that balance of payments problems will again soon face the Commonwealth if we open our doors to imports before we adequately increase the protective tariffs of Australian industry.

Basic Wage.

A high level of production in all industry, primary and secondary, is the key to prosperity. To achieve high production, costs must come down, but what positive action outside industry is being taken in an attempt to assure that wages are tied more closely to the country's level of production? The Government could do much by facing this issue of the basic wage. The basic wage should be based on statistical evidence made available to the Court. Both the basic wage and all wages and other rewards for labour must be more realistically based both on the hours of work and the production levels achieved.

Taxation and Cost Reduction.

The Government can considerably help to reduce costs by reducing taxation.

Costs would be reduced immediately if the Government did away with Payroll Tax and those primage duties, etc., which so adversely affect the cost of production.

In the interests of cost reduction, Australian industry is rightly being pressed to install mass-production, high-efficiency plant. However, it is too little realised that high efficiency plant costs many times the price of the plant it replaces, or that total depreciation reserves on existing plant are generally grossly inadequate for the purchase of plant of higher efficiency. Consequently, with high company taxation preventing the creation of adequate reserves much industry has little opportunity of commanding the necessary funds required for essential plant replacement.

If the Treasurer could grant industry the right to create tax-free reserves against plant replacement the resultant installation of high efficiency plant would quickly be reflected in reduced costs all round.

(Continued on next page)

PRESTIGE LIMITED (Contd.)—

Adequate Tariff Protection Essential.

The Australian economy is sound and will remain sound providing the Government and all engaged in industry, primary, secondary and tertiary, realise that prosperity and our living standards depend entirely on our ability to increase production and reduce costs, and providing we further realise that the prosperity of both industry and commerce and the maintenance of reasonably full employment has depended, over the last twelve months, far too greatly on the insecure protection temporarily afforded by import licensing.

Few, I am sure, desire to see import licensing extended any longer than is absolutely essential; however, still fewer people will want to see the Australian economy subject to the troubles and unemployment which will follow unless the Government either increases or otherwise fortifies the tariffs of many secondary industries prior to the removal of import licensing.

Restoration of Confidence Essential.

In the interests of continued national development we must remove the stalemate that exists in the economy today where little is being done in the interests of essential development, because the uncertainties of the future have so seriously dampened industrial confidence.

American Prosperity Built on Tariff Protection.

Australia looks with envy towards the prosperity and high standards of living of the United States of America. U.S.A. leads the world in industrial efficiency and low cost production. Rightfully, Australian industrialists are continually being asked to emulate American industrial efficiency. The backbone of this phase of American leadership comes from the fact that American industry has for many years been guaranteed the bulk of its local markets.

In support, Mr. Foletta read extracts from addresses at the Economic Leadership Conference held in New York on June 15 1944, which showed conclusively that in the opinion of this Conference, the low production costs and efficiency of American industry, living standards, and national prosperity were due to the security of the home markets to industry through adequate tariff protection.

Australian industrialists and Australian workers generally are quite the equal of their counterparts in U.S.A. Let us assure the local market to Australian industries, in the same way as the local market is assured to American industry, and we will have taken the first step essential to our drive towards high efficiency and consequent low cost, and what is more, we will have restored confidence in industry and assured our country of both prosperity and essential development.

Wellington Alluvials Ltd.

In his address to shareholders at the Annual Meeting held on August 7, the Chairman, Mr. C. Y. Syme, said:

Operations for the year ended April 30, 1953, resulted in a loss of £15,263, after allowing £13,388 for depreciation.

The Company's financial position has deteriorated a little further as must be expected in view of the year's adverse working conditions, although it is much better than was forecast at the time of our last Annual Meeting.

It will be noted from the balance sheet that provision for replacements and renewals now stands at £29,910, an increase of £7,660 on the previous year. This provision will be required to cover necessary expenditure under this heading as it is incurred.

Operations.

After a stoppage of 92 days to effect the extensive repairs reported to you last year, dredging was resumed on May 19, 1952. Subsequent interruptions consisted in the main of replacement of the bottom tumbler, ladder hoist lines, overburden stacker conveyor belt and repairs to the pontoon wellway, amounting in all to 24 days lost dredging time.

Power supply restrictions involved 199 hours additional loss of dredging time but these have now eased considerably and are no longer of major significance.

Since these major shutdowns we have experienced improved continuity of operation coupled with easy and relatively shallow digging resulting in a high average dredging rate. The total yardage for the year was 3,633,000 cubic yards which constitutes a record performance for the Wellington dredge. Consequent on this, the stretch of low-grade ground referred to last year was traversed more quickly and at lower cost than was anticipated. In March of this year the dredge entered ground with values which improved to 2.20 grains per cubic yard at the end of April, and since then values have averaged 2.34 grains which figure is in line with the returns anticipated from the boring data.

The average recovery for the year was 1.53 grains of fine gold representing 96% of the ground content estimated from the bores.

With the dredge again approaching the Macquarie River, preparations were put in hand in January to clear the heavy timber growing along the river banks and obstructing the dredge course. This was a considerable undertaking and we were fortunate in securing the aid, by way of expert advice and skilled workmen, of Australian Newsprint Mills Ltd. By the middle of April, sufficient large trees had been felled to clear the dredging course for the next four years. Removal of the smaller trees and disposal of felled timber and debris continues.

A 40-ton crane, operated from the dredge mooring winch, has been installed on the bow gantry to facilitate removal of the heavy stumps and buried timber ahead of the dredge, and this should minimise a cause of costly delays.

Close boring ahead of the dredge ceased at the end of July last year and it is not expected that expenditure on this account other than boring for intermittent short periods, will be necessary for several years.

Supply of unskilled labour has been adequate and of a better standard than formerly, and with less absenteeism.

Dredge maintenance has shown satisfactory improvement, although skilled tradesmen are still in short supply. Thirty-five new dredge buckets were installed during the period.

Wage rates have continued to rise, the basic wage having increased from £10/16/- to £11/18/- per week during the period under review. This has also been reflected in increased costs of electric power, stores and spare parts.

Gold Premium Sales.

Although the fixed price of gold has remained stationary at £15/9/10 per fine ounce, disposals on the free market per medium of the Gold Producers' Association have returned premiums totalling £10,737 during the financial year, an average of approximately 18/7 per fine ounce.

Gold premium for the month ended April 30 was 12/2d. per standard ounce equivalent to 13/3d. per fine ounce. There has been of late a consistent drop in premium for sales on the free market.

Recovery of small industrial diamonds during the year yielded a return of £622.

Working Costs.

Although the overall expenditure on last year's dredging reached a record high level, the unusually large yardage dredged resulted in a cost per cubic yard of 12.67d. compared with the previous year's figure of 15.55d. It is interesting to note by way of comparison that for the year ended April, 1941, the corresponding figure stood at 4.96d. for 3,260,000 cubic yards handled.

Since the beginning of the current financial year the dredge has entered the course of the Macquarie River and will be in, or in contact with the stream until about October or November of 1954. During this time dredging costs per cubic yard will be higher, due to the disposal of stumps and buried trees. However, improved values should more than offset this condition.

Dredging Operations.

In order to keep shareholders better informed, your directors recently decided to publish weekly returns instead of monthly as formerly.

The dredge is generally in good condition, but major repairs and renewals must continue to be necessary. Electric transmission lines, shore buildings and plant are in good order.

Subject to a satisfactory relationship between the price of gold and the cost of winning it, the undredged area remaining in our leases is equivalent to an economic life of some eleven to twelve years.

The lag in re-soiling and re-surfacing the dredged area previously reported is receiving close attention, and the carrying out of this work must, of course, have an adverse effect on costs.

Tree planting associated with this rehabilitation of the surface is making satisfactory progress.

Some shareholders have made the suggestion that, in view of the disappointing results, consideration should be given to the question of the Company giving up operations. This question was carefully considered by your Board towards the end of last year before dredging was commenced on the unprofitable ground. The dredge is easily the most important of the Company's assets and whilst its value is considerable as long as the Company is engaged in dredging in the Macquarie River it might well be a most difficult asset to realise if these dredging operations were abandoned. Accordingly, your Board decided that the best course in the interests of shareholders would be to continue operations as long as it was possible to do so, and as things have since worked out that decision appears to have been the proper one. Our margin between profitable and unprofitable operation is uncomfortably small and the effect of continued inflation of costs against a more or less fixed price for gold makes it impossible to form any firm view as to our future success.

Staff.

Mr. A. P. Marshman, who was Manager of dredging operations at Wellington for nine years, accepted a position with Australian Iron & Steel Ltd., Port Kembla, and took up duties on June 29, 1953. He has been succeeded by Mr. J. A. Mitchell, Engineer, formerly in charge of B.H.P. operations, Rapid Bay, South Australia.

Staff work and labour relations at Wellington continue to be satisfactory and no industrial disputes have occurred.

Patons & Baldwins (Australia) Limited

Reg. Office: 84 Flinders Lane, Melb. **'Phone:** C. 3340. **Directors:** J. R. Burt (Chairman), H. S. C. Gray, A. P. Mitchell, A. R. Procter, W. M. Stewart, W. E. Walklate, P. A. Wright. **Auditors:** Young & Outhwaite.

2nd Year ended May 3, 1953. Meeting July 30, 1953.

Wool prices during the year rose progressively enabling the realisation of stocks without incurring losses which had been anticipated. With greatly increased turnover, profit recovered sharply to £329,605, and an ordinary dividend of £90,000 (6%) was paid.

Principal manufactures of the company's Launceston mill are high class hand knitting wools, marketed throughout Australia, mending and embroidery wools, Turkey rug wool, also considerable quantities of yarns for manufacture into machine knitted goods.

On the merchandising side the company also handles a number of imported and local lines, such as knitting needles and crochet hooks, angora yarns, rug tapestry and embroidery canvas, etc.

Under the terms of sale of the business, the parent company, Patons & Baldwins Ltd. of England, accepted £1 million of ordinary capital in part payment, and also agreed that a further amount of nearly £1¾ million would remain as an outstanding debt—interest free—until 1976, but reducible at any time if it suited the Australian company.

In his address to shareholders at the Annual Meeting on July 30, the Chairman, Mr. J. R. Burt, reported greatly increased turnover and the recovery of the write-down of stocks in the previous year. His address reads:—

The company's profit on trading after deducting depreciation on fixed assets, £23,911, and Directors' fees, £2,250, is £622,853, compared with £95,694 for the previous year. This very satisfactory result is largely accounted for by profitable trading on greatly increased turnover, together with the recovery of the write-down of stocks rendered necessary at the end of the previous financial year.

You will realise that the profit on trading which I mentioned is before making provision for taxation to the extent of approximately £293,000. As an offset, we have added back the sum of £27,800 representing an excess provision of income tax in the previous year. This was brought about by the extension of the initial depreciation allowance to June 30, 1951, after the Government had previously announced in the press that this allowance would cease as at the end of the taxpayer's financial year which, in our case, was April 28, 1951.

Stockholders will appreciate the necessity for making substantial reserves in a business such as ours and your Directors were very pleased indeed to find themselves in a position to transfer £200,000 to a general reserve account. This will place the company in a much stronger position compared with last year when, through a combination of circumstances, even the payment out of our own profits of our Preference dividend was for a time doubtful. You will observe that, in addition to the transfer to general reserve, the item preliminary expenses has been written off and issue expenses written down to £40,000. Your Directors aim to write this latter item off as soon as circumstances permit.

Having made these necessary reserves and provisions, your Directors felt free and moreover pleased to be able to declare a dividend of 6% on the ordinary stock of the company, payable immediately, and seek confirmation thereof from this meeting.

Balance Sheet.

Turning to the balance sheet, you will see that the cost of fixed assets has increased by approximately £116,000. This is mainly accounted for by the further progress in the construction of the company's new warehouse at Mascot, New South Wales. This warehouse also explains the item in the balance sheet entitled "contingent liabilities on contracts for new works", being the further commitments necessary for the completion of the building. It is expected that the building will be available for occupation towards the end of this year and your Directors are confident that great benefit will be derived in having this modern warehouse to facilitate the distribution of our products in the Northern States.

Current assets have increased by approximately £500,000 and current liabilities (including tax provision and ordinary dividend) by approximately £360,000, making an increase in net current assets of approximately £140,000.

The asset entitled "Patons & Baldwins Limited Advance Account" totalling £626,769, reflects interest bearing temporary advances which the company has made to our parent company, principally in connection with the purchase of wool by the parent company.

Trading Conditions.

The price of wool progressively rose during the year under review and it became necessary to increase the price of our products to absorb the increased cost. However, as the increased turnover to which I have already referred indicates, the popularity of our hand-knitting and manufacturing yarns remained unaffected. Since the close of the year under review the price of wool has remained steady and general trading conditions are satisfactory.

Overseas Affiliations.

Your company maintains constant communication with the parent company so as to be fully informed on overseas developments, particularly in regards to the maintenance of modern standards at the mill and the latest methods and information on sales distribution and fashion trends overseas. Your company derives much benefit from this association. Moreover, we had the pleasure and advantage of a visit from Mr. P. A. Wright, one of our own Directors and also the Chairman of Directors of our parent company. Finally, certain of our senior executives will be visiting our parent company's mills and warehouses in England over the next eighteen months. One of our executives is already there.

Conclusion.

In concluding, I desire to place on record the loyal and efficient services rendered to the company by all its employees, both in Tasmania and on the Mainland. To all of them your Directors, on their and your behalf, express their thanks.

Volume of turnover was again a record, but higher operating costs, mainly wages and salaries, reduced the percentage of trade profit to turnover.

The parent company manufactures essences, icing sugar, marzipan, fondant and ornamental cake decorating lines for bakers and pastrycooks.

The jam making subsidiary of Clegg & Kemp Pty. Ltd. was transferred to the main Kensington factory in order to increase efficiency, in response to keen competition in the jam and allied trades.

The second subsidiary, J. S. Corden & Co. (Vic.) Pty. Ltd., manufactures machinery and provides other supplies to the butchery and pastrycooking trade.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 1st and 2nd prefs., £5/11/7; 5/- ord., 6/11.

Record sales were reported by the Chairman, Mr. H. F. Soding, to shareholders at the Annual Meeting held on July 8. His address reads:

Your Directors are pleased to report that the sales for the period again resulted in an all-time record. The gross profit was higher than last year, but increased operating costs, mainly due to wages and salaries, had the effect of reducing the percentage of trading profit to turnover.

In my report last year I indicated that your Directors had embarked upon a policy to solidify the resources of the company. It is pleasing to report that, without lowering the profit return on capital, your Directors have been able to present to you a Balance Sheet which shows the company in a very strong financial position.

Balance Sheet.

The balance sheet figures show considerable movement. The current assets were reduced by £54,800 due mainly to the items stock on hand (£35,000), sundry debtors (£19,000) being reduced, both in spite of the ever-increasing value of commodity lines carried by the company. The current liabilities were reduced during the year by £63,000, sundry creditors by £22,600, the amount due to our bankers by £21,700, provision for taxation by £18,500, and it is pleasing to note that the amount for the provision for taxation as shown in the balance sheet is the liability to the Government on the current year's profits.

Profit and Loss.

Whilst the profit from trading was lower by some £3,000, the reduction in the provision for taxation (£2,000), the lower amount required for depreciation of assets, the profit on the sale of fixed assets, and no allocation necessary to provide for bad debts, resulted in a higher amount being transferred to the profit and loss appropriation account. The amount standing to the credit of the profit and loss account after paying an interim dividend in January, 1953, of £7,085, is £53,358, and your directors now recommend a final dividend of 4% on 8% Preference Shares, 2½% on 5% Preference Shares, and 5% on Ordinary Shares, making for the year a total of 8% and 5% on the two classes of Preference Shares, and 10% on the Ordinary Shares out of the profit earned for the year ended 31st March, 1953. If this meeting approves of the recommendation, the final dividend will absorb £7,085, leaving £10,560 of this year's profit to be added to the "carry forward" increasing it to £46,273.

J. S. Corden & Co. (Vic.) Pty. Ltd.

Your Directors regard this subsidiary as an important part of our organisation, providing machinery requirements of many of our customers. In this connection your Directors have planned for the engineering shop to be transferred to our own larger premises at 115 Stanley Street, West Melbourne, for the further development of new and improved machinery associated with the meat and bakery industries.

Clegg & Kemp Pty. Ltd.

This subsidiary's manufacturing activities have been transferred to the company's premises at 389 Macaulay Road, Kensington, where your directors have installed a large steam generator, and re-arranged the outlay of the plant to give greater efficiency in an endeavour to offset the ever-increasing cost of manufacturing, raw materials and the very keen competition that is so prevalent in the jam and allied trades.

Prospects.

The Government's recent relaxation of import control will certainly enable the company to import further consumer goods. I am not so concerned over this phase of economics as I am of the ever-increasing costs of primary raw materials, which is having a very detrimental effect upon the consumption of goods associated with this company. I am of the opinion that, to assist the food industry, the Government should give some consideration to the remission of sales tax on all food products.

The policy of your directors is to further develop the manufacturing activities of the company, and I trust that I will be able to present to you at our next meeting a result comparable with the times.

Staff.

Our thanks to the management and staff themselves, which I now warmly express are not just a mere form of words but a sincere appreciation of the vital part which they play in the success of the Company and its subsidiaries. It is pleasing to report that the sums appropriated to the staff superannuation and bonuses paid to the employees are greatly appreciated by them.

Robert Bryce & Co. Ltd.

Merchants, Importers.

.eg. Office: 526-532 Little Bourke St., Melb. **'Phone:** MU 6451.
Directors: H. S. B. Wight (Chairman), J. W. Hawdon (Manag. Director), J. B. Bryce, H. C. McTaggart, C. E. Rigby, G. Warner, C. W. Westwood. **Auditors:** G. Marquand & Son.

Year ended March 31, 1953. Meeting August 4, 1953.

Following import restrictions, profit fell sharply from 90,000 to £12,766. Reduced dividend of £30,252 (10%) was aid partly from dividend equalisation reserve.

Carrying on a business founded in 1906, the company operates as merchants, importers and indentors. It specialises as suppliers of raw materials to secondary industries, among the items handled being heavy chemicals, electrodes and welding equipment, laundry and dry cleaning equipment, refractories and foundry supplies, plastics, tanning supplies, raw cotton, filter materials and requirements of the paint, textile, rubber and brush industries.

A partly-owned subsidiary—McKenzie Bros. Pty. Ltd., of Glebe (N.S.W.)—manufactures laundry and dry cleaning equipment.

In addressing shareholders at the Annual Meeting on August 4, he Chairman, Mr. H. S. B. Wight, said—

You will recall that at our last meeting in August, 1952, I drew our attention to the Government Import Regulations imposed during March, 1952, in Australia and New Zealand, and also the policy f restrictive bank credit then being pursued, both of which would everely affect the volume of our sales and, consequently, our evenue. I regret that, due mainly to these factors, the consolidated rofits for the year have fallen to £12,766.

At the commencement of the year conditions were difficult. Unshipped imported materials on firm order were debited against uota which severely restricted opportunities for new sales. Consumer demand slackened and manufacturers by and large worked n accumulated stocks. Indeed, the present liquid position of most ompanies is due to the depletion of stock inventories brought bout by the conditions I have mentioned.

Balance Sheet

You will have noted that our current assets shown in the Consolidated Balance Sheet have decreased from £1,086,847 to £712,924. The decrease of £373,923 is represented by decreases in sundry debtors f £226,000 and stocks £210,000, offset by an increase in cash at bank f £70,000. These movements reflect the general trade conditions perating now as compared with a year ago.

Similarly, current liabilities show a reduction of £360,411, comrising reductions in bank overdraft of £157,000, bills payable and rovision for exchange, £72,000, sundry creditors, £71,000 and proision for tax and dividends, £60,000. Again these reductions indicate the lower level of business activity.

Total shareholders' funds at March 31, 1953, were £492,555, as gainst £506,814 at March 31, 1952.

Trading Results

All branches of the parent trading company operated profitably or the year, although on a much reduced level. Despite early ction to control expenses commensurate with the lower volume f business, operating expenses continued to increase. The year 951-1952 was a record one for the Company and for the reasons have mentioned, the year just ended, compares most unfavourably. ales decreased sharply, as did gross revenue.

It has been deemed necessary to reserve £1,621, being the liility under the New South Wales State Awards for long service eave. Net profit of the parent company was £27,114, after proiding income tax at current rates, £20,850, and depreciation £2,803. s stated in the director's report, an amount of £1,842, being ncome tax under-reserved for 1951-1952 has been debited to profit nd loss Appropriation account.

The business of our subsidiary, Mackenzie Bros. Pty. Ltd., was most adversely affected by trading conditions. Quite a large proportion of its business is with government institutions. Restricted governmental expenditure, particularly in New South Wales, not only meant a falling off of new business but also a deferment of old orders.

It is with regret that I record the death during the year of our Manager, Mr. McEwen. Mr. Westwood, one of your Directors, an engineer with previous experience in the laundry and dry cleaning machine trade, has assumed managership. Mr. Westwood has been closely associated with this subsidiary for some months and, having made an investigation of stocks, he recommended that it would be prudent to revise valuations by writing off approximately £10,900 and this, together with the trading loss of £2,500, makes a total loss of approximately £13,400.

Trading Prospects

Recent increases in import quotas will assist sales opportunities. There has been a small but noticeable firmer undertone in business over recent months, which is encouraging, and as previously mentioned, stocks in manufacturers' hands are much lower than a year ago. It is reasonable to assume that business will be freer during the current year and on a larger scale. On the other hand, competition is keener and profit margins narrower.

A serious problem confronting the management is the continual rise in operating expenses. Increases in salaries and wages, as well as other expenses due to cost of living adjustments demand greater efficiency and increased business to offset them. The position is being carefully watched and expenses are being reduced wherever possible without impairing efficiency.

Any forecast as to future results must be made with some diffidence having regard to present conditions but your Directors consider that profits should be reasonably satisfactory in the absence of any unforeseen happenings but certainly not on the scale of 1951-1952, which must be regarded as an exceptional year.

Mackenzie Bros. Pty. Ltd. is obtaining a reasonable share of available business. Any increase in finance allocated to Government and other instiutions will increase the sales potential. The position is being closely watched by your Board.

General

In conclusion, on your behalf and on behalf of my colleagues and myself I wish to express sincere thanks to the management and the staff of the company and its subsidiary, who by their loyalty and co-operation have served the company during a difficult year.

Each £1 of preference capital is backed by £7/7/10 of net tangible assets (book values in consolidated balance-sheet, not allowing for uncalled ordinary capital). In a winding-up, preferences would participate equally with ordinaries in surplus assets, and on that basis the asset backing of each class is £2/9/3.

The following address was delivered by the Chairman, Mr. F. P. Derham, to shareholders at the Annual Meeting on July 13.

When addressing you last year, I touched briefly on the prospects for the new year. At that time Australia's economic position was less favourable than it had been and there were clear signs that the position was likely to become worse. In view of this, some decline in the Company's trade was forecast.

That forecast proved accurate for the effects of the changed economic position were felt by the Company, particularly in the first half of the year when sales fell. Unfortunately costs did not fall in sympathy. On the contrary they continued to rise, making adjustment of selling prices necessary.

However, the second half of the year saw a recovery in sales and this factor, in conjunction with higher selling prices, did much to restore profits.

The accounts before you indicate certain of the matters to which I have made reference.

A reflection of higher selling prices is seen in the gross profit figure which exceeded last year's total. This advantage was, however, more than offset by increased expenses, and lower trading profit resulted.

However, net profit, aided by a reduction in the amount required to provide for income tax, was but little below that of the previous year, a result which the Directors consider satisfactory having regard to the less favourable trading conditions experienced.

Consolidated Accounts

The overall profit of the Company and its subsidiaries, as disclosed by the consolidated accounts, increased, aggregate profits of the subsidiaries having been greater.

Tasmanian Co.

To this end our Tasmanian subsidiary made the greatest contribution. Despite competition from the mainland, this Company's sales were markedly expanded and increased profits resulted.

The dividend paid to the parent Company was however kept within safe limits as it was necessary to conserve funds. During the year the name of the Company was changed to SWALLOW, HAYWOOD PTY. LTD., thus linking the names of two of the pioneers of the biscuit industry in Australia.

Dandenong Co.

The decision to change the nature of production at the Dandenong factory from dehydration to wafer making proved sound. This subsidiary had a successful year and played a useful part in supplementing the range of products of the parent Company.

Ice Cream Co.

The experience of the Ice Cream Company was less fortunate, its results showing more clearly the effects of high costs and reduced spending by the public.

In this type of business where sales volume is all important and where fixed expenses, particularly those of selling and distribution are high, a contraction of sales is followed by a disproportionately greater contraction of profit.

Consumer resistance to higher prices was experienced, but increase in selling prices has been unavoidable by reason of the growth in costs.

The greatest single influence on ice cream prices in the past two years has been the steep rise in the cost of butter fat, the basic ingredient.

As I mentioned last year also, the price of ice cream is inflated by the inclusion of Sales Tax at the rate of 20%, a matter calling for review, and one which we hope did not escape the notice of the Government when framing the forthcoming Budget.

Some sales of ice cream were lost to lower priced alternative products, and to meet competition from flavoured ice blocks which, by reason of low ingredient cost and freedom from Sales Tax, can be retailed at a more popular price than that of ice cream, the Company recently introduced a line new to Australia, but familiar in America, where ice cream costs have risen also.

Our product, called "Maltifreez," is not ice cream although it has similar characteristics. Having as its basic ingredient a product of vegetable and not of dairy origin, it is cheaper to produce than ice cream, and it is proving popular with the public on account both of its price and its eating qualities.

Notwithstanding the experience of the past year I am not despondent for the future of the ice cream business. Given more favourable conditions, the Company will again earn profits compatible with the funds employed in it. The Company is firmly established and I am glad to say that, in spite of increased competition, the number of its customers was added to during the year.

Wunderlich Ltd.

Metal Ceiling and Tile Manufacturers, etc.

Reg. Office: Baptist St., Redfern, N.S.W. **Melb. Share Register:** 210 Hanna St., South Melb. **'Phone:** MX 1261. **Directors:** Alfred Wunderlich (Chairman and Manag. Director), D. 45th Year ended February 28, 1953. Meeting May 14, 1953.

Despite slackness in the building trade and an easing of demand for some products, sales were 25% higher in value. Profit after depreciation was £14,000 higher at £169,393; ordinary dividend was maintained at 10%, absorbing £54,764, and reserves rose by £70,842.

WORMALD BROTHERS SYSTEMS

—for protection against FIRE!

To kill fire effectively, each type of fire requires a different extinguishing technique

"Simplex" and "Kidde" ("Lux") Fire Extinguishers are self-contained units, ruggedly constructed, foolproof. *Each does a specific job.* At your office, factory, engineering shop, warehouse or store—on farm or station—in your car, truck or yacht—they're always ready for instant, positive action in an emergency.

"Simplex" and "Kidde" Fire Extinguishers are approved by all Government Departments, and used by the Navy, Army and Air Force.

A "SIMPLEX" OR "KIDDE" FOR EVERY TYPE OF FIRE RISK

(A) *"Simplex" Auto Type Carbon Tetrachloride (CTC). Capacity: 1 quart. For motor lorries and cars, lift motor rooms, small electrical switchboards and other electrical risks.*

(B) *"Simplex" Stored Pressure Carbon Tetrachloride (CTC) Type. 1-gallon capacity. For large electrical installations, telephone exchanges and similar risks.*

(C) *"Simplex" Foam Type, 2-gallon capacity. Specified for all highly inflammable liquids and materials when, in case of fire, a blanketing effect is desired.*

(D) *"Simplex" Soda Acid Type. 2-gallon capacity. For all general fire protection purposes. Install in offices, factories, hotels, halls, farm buildings, theatres, homes.*

(E) *"Kidde" (Hand) Carbon Dioxide Gas (CO_2) Type, 12-lb. capacity. Has no damaging after-effects. Particularly specified for protection of switchboards, electrical motors and apparatus, and certain inflammable hazards.*

"SIMPLEX" and "KIDDE"

(Previously known as "LUX")

HAND FIRE EXTINGUISHERS

NORTHERN MINES DEVELOPMENT N.L.—

First three holes Wheal Doria Mine, Tennant Creek have now been completed.

No. 1 Hole—296 ft.-300 ft. 108.9 dwts. per ton (Check as 103.5). 300 ft.-307 ft. 18.5 dwts. per ton (Check assay 16.3).

The average value of the section to 296 ft. to 307 ft. is 49.7 d per ton on an estimated true width of 72 inches.

No. 2 Hole—305 ft.-315 ft. Lode formation. Very low values

No. 3 Hole—273 ft.-307 ft. Very low values.

No. 4 Hole—is in progress, and is approaching target ar Directors report that good values in No. 1 hole are encourag but good ore is absent in same lode cut by other two holes, dicating that this shoot cannot, at this depth at least, exceed feet. These shallow holes are for guidance only, and ultimate tar for investigation is in deeper ground.

RENISON ASSOCIATED TIN MINES N.L.—

Concentrates produced, tons—		
Lead	644	694
Zinc	3,565	3,921
Copper	296	291

MT. ISA MINES LTD.—

	July 1953.	June 1953.	May 1953.	Apr. 1953.	July 1952.
Dry tons milled	51,830	52,130	41,880	54,430	55,830
Bullion produced	2,785	3,485	1,970	3,060	3,310
Zinc concentrates produced	3,721	3,600	2,478	2,898	4,098
Copper ore treated	44,720	36,020	42,072	40,517	—
Blister copper produced	1,460	1,632	1,405	1,030	—

NEW BROKEN HILL CONSOLIDATED LTD.—

Four weeks ended August 1, 1953.

Ore Treated—36,060 tons—assaying: 9.4% lead; 2.1 ozs. silver; 14.9% zinc.

Lead Concentrate Produced—4,208 tons—containing: 3,092 tons recoverable lead; 58,886 ozs. silver.

Zinc Concentrates Produced—9,825 tons—assaying: 51.5% (5,060 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 1/8/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentrate. Zinc.
1953 (30 weeks)	17,485 tons	347,155 ozs.	28,060 tons
1952 (30 weeks)	9,228 tons	208,672 ozs.	14,140 tons

NORTH BROKEN HILL LTD.—

Four weeks ended July 25, 1953.

Crude Ore Treated—30,841 tons—assaying: 13.3% lead; 7.4 ozs. silver; 10.8% zinc.

Lead Concentrate Produced—5,644 tons—assaying: 70.7% (3,990 tons) lead; 37.4 ozs. (210,982 ozs.) silver; 5.6% zinc.

Zinc Concentrate Produced—5,642 tons—assaying: 0.7% lead; 1.3 ozs. silver; 51.1% (2,881 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/7/53 to 25/7/53), compared with the same period last year—

	Lead Concentrate. Lead.	Lead Concentrate. Silver.	Zinc Concentrate. Zinc.
1953 (4 weeks)	3,990 tons	210,982 ozs.	2,881 tons
1952 (4 weeks)	3,518 tons	161,630 ozs.	2,490 tons

DEPRECIATION

Every business provides for the depreciation of its plant.

The future of the men who do the work should also be safeguarded.

EVERY well-managed Business makes provision for the year to year depreciation of both machinery and buildings so that they may be replaced at the end of their lives.

Of far more importance than the machinery and plant are the men who run it. Their future needs to be safeguarded too, and the best way to do that is for the Employer to institute a Staff Superannuation Fund.

The strength of the A.M.P. is a guarantee that the Superannuation Fund will be well managed and will provide for the future financial welfare of employees and their dependents.

The Society will be glad to send an experienced Representative to explain how the Society can assist you.

A.M.P. Society

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

HEAD OFFICE: 87 PITT STREET, SYDNEY

MELBOURNE: 425 COLLINS STREET

BRANCHES: BRISBANE, ADELAIDE, PERTH, HOBART, CANBERRA, LONDON and WELLINGTON

DISTRICT OFFICES IN ALL STATES

Commonwealth £82,921,000 Cash and Conversion Loan

ASH LOAN £50,000,000.

The Treasurer, Sir Arthur Fadden, has announced the terms a new cash Loan for £50,000,000 — the 18th Security Loan — e proceeds of which are to be used for public works and ser-es of the Commonwealth and the States. The Common-alth's share is to be used to make advances to the States der the Commonwealth-State Housing Agreement.

The terms are—

3 per cent. per annum on securities maturing in 1955.
4½ per cent. per annum on securities maturing in 1966.

The price of issue is par, and taxation and other conditions are the same as those of the public loan issued in March last. The Loan opened on September 23 and will close not later than October 17.

CONVERSION LOAN £32,921,000.

At the same time holders of £32,921,000 of 2 per cent. securities which mature on October 15 next are being offered conversion on the same terms as for the cash loan. Those holders who do not wish to accept this offer will receive their money back on October 15 on application to the Commonwealth Bank, which will also attend to requests for conversion.

E. A. MACHIN & CO. LTD.—Net profit for year ended June 30 £131,309, after taxation £68,900 and depreciation.

ELASTIC WEBBING INDUSTRIES LTD.—Profit for year ended June 30 £32,499 (previous £31,539), after taxation £19,000 (£29,300) and depreciation £26,404 (£22,154).

EMAIL LTD.—Arrangements made to absorb R. Werner & Co. Pty. Ltd., manufacturers of refrigeration and air-conditioning plant at Richmond, Victoria. Email will issue to Werner shareholders 330,000 5/- stock units in exchange for whole of Werner's issued shares.

FETTER MILLS LTD.—Consolidated profit for year ended June 30 £44,920, after depreciation £13,824 and taxation £41,607. Sales were a record and trading expected to continue at high level.

F. J. WALKER LTD.—Consolidated profit for year ended June 30 £318,565 (last year £185,669), after taxation at 1952 rates £260,000 (£153,651) and depreciation £32,786 (£28,234).

FOY & GIBSON LTD. — Consolidated accounts for year ended July 31 reveal a substantial reduction in net profit, due mainly to the loss incurred by Eagley Mills early in the year; during second half of financial year turnover of retail stores progressively increased and profits substantially exceeded those of previous year.

BUSINESS:
Allied Meat Industries Limited was formed on 31st August, 1953, as a holding company with an authorised capital of £500,000 in 2,000,000 ordinary shares of 5/- each. Six hundred thousand shares of 5/- each have been issued to take over the shares of three operating companies, Prudential Investments Pty. Ltd. (formed in 1938), Armour & Co. Pty. Ltd. (formed in 1946), and Riverina Meat Packing Co. Pty. Ltd. (acquired by the latter company in 1946), which carry on the business of retail butchers through a chain of 21 shops in the suburbs of Melbourne.

INVESTIGATING ACCOUNTANTS' REPORT.

FLACK & FLACK
Chartered Accountants (Australia)
PRICE, WATERHOUSE & CO.
128 William Street,
Melbourne, C.1.
10th September, 1953.

Messrs. J. B. Were & Son,
375 Collins Street,
Melbourne, C.1.

Dear Sirs,

We have examined the audited accounts of Armour & Co. Pty. Ltd., Riverina Meat Packing Co. Pty. Ltd. and Prudential Investments Pty. Ltd. for the five years ended 30th June, 1953, and have prepared a statement of the combined assets and liabilities of the companies at that date and a statement of the combined net profits of the three companies for the five years then ended.

Allied Meat Industries Limited has been incorporated with an authorised capital of £500,000 divided into 2,000,000 shares of 5/- each. You have informed us that this new company will acquire all the shares in Armour & Co. Pty. Ltd., Riverina Meat Packing Co. Pty. Ltd. and Prudential Investments Pty. Ltd. in exchange for 600,000 shares of 5/- each in Allied Meat Industries Ltd.

We understand that 180,000 shares of 5/- each will then be released for sale to the public at par and that profits earned after 30th June, 1953, will be assessable for taxation on the basis applicable to a public company.

PROFITS OF THE GROUP OF COMPANIES.

The combined net profits of Armour & Co. Pty. Ltd., Riverina Meat Packing Co. Pty. Ltd. and Prudential Investments Pty. Ltd. for the five years ended 30th June, 1953, after making such adjustments as, in our opinion, are appropriate, were:—

	Years ended 30th June,				
	1949	1950	1951	1952	1953
Adjusted Trading Profits (See Note A)	£17,801	£21,484	£24,887	£48,461	£67,744
Depreciation Charged (See Note B)	2,141	4,912	4,137	1,467	1,406
	15,660	16,572	20,750	46,994	66,338
Estimated Taxation (See Note C)	4,438	4,570	9,333	20,535	22,469
Adjusted Net Profit ..	£11,222	£12,002	£11,417	£26,459	£43,869

NOTE A.—The profits set out in the first line are before charging depreciation and taxation. We have not made any adjustment for the additional expenses which may be incurred by Allied Meat Industries Ltd.

NOTE B.—Depreciation has been provided at rates allowed for taxation purposes including special initial depreciation where applicable. Depreciation has been calculated on the basis of original costs and not on the written-up value of fixed assets.

NOTE C.—We have calculated the Ordinary Federal Income Tax and Super Tax which would have been payable on the profits as adjusted by us, after taking into account the necessary reconciliation between the companies' profits and the income for taxation purposes, using the rates of tax applicable to public companies in year. For the profits of the year ended 30th June, 1953, we have used the rat tax proposed by the Federal Treasurer, namely, 6/- in the £ on the first £ of taxable income and 7/- in the £ on the remainder.

No provision has been made for the extra tax which may have been pa on the profits of some years which were not distributed within six months of ba date.

ASSETS AND LIABILITIES OF THE GROUP.

The Balance Sheets at 30th June, 1953, of Armour & Co. Ltd., Riverina Meat Packing Company Pty. Ltd. and Prude Investments Pty. Ltd. were audited by Messrs. William Buc Co., Chartered Accountants (Australia).

Following an independent valuation made in August, 195 the butchery businesses owned by the three companies (and cluding one shop rented to a tenant) Plant, Motor Vehicles, Furniture and Fittings and the Goodwill of the butchers s which were valued at one figure, £104,612, were written up in books of the operating companies to the full extent of the va tion as follows:—

Book value before write-up	£2
Appreciation	8
Total independent valuation of the businesses including Plant, Fittings, Trucks and Office Equipment (excluding stock on hand)	£10

The Directors have allocated this total valuation as follows:—

Goodwill of the butchery business	£6
Plant	3
Motor Vehicles	
Office Furniture and Fittings	
	£10

A Revaluation of Assets Reserve Account of £80,224 created, this being the amount by which the above assets were ten up.

Freehold Land and Buildings were also independently va in August, 1953, but the book values have not been adjusted t Valuer's figures. Total costs and valuations are compare follows:—

	Book Figure being Cost	Indepen Valua
Freehold Property	£21,675	£20,

We have prepared the following statement of the combine sets and liabilities of the group of companies to be controlle Allied Meat Industries Limited, consolidating the assets and li ties of the Subsidiaries and the capital accounts, assets and li ties of Allied Meat Industries Limited as they would have be 30th June, 1953, if that Company had been incorporated at date and constituted in the manner now proposed.

Current Assets—		
Cash at Bank and on hand	£42,154	
Stock on hand, at cost	4,203

from which is deducted—		
ss cost to Allied Meat Industries Limited over the par value of shares in the subsidiaries	135,998	
		16,614
		£166,614

NOTE D.—Until 30th June, 1953, the operating companies were assessable as te companies and provision has been made for Ordinary Federal Income Tax on profits of the year then ended at the rates of tax proposed by the Federal Treasurer, namely, 4/- in the £ in the first £5,000 of taxable income and 6/- in the £ on the remainder.

No provision has been made for Undistributed Profits Tax which may be payable by the operating companies on profits of the year ended 30th June, 1953, which are not distributed by 30th April, 1954. We are informed that a sufficient distribution will be made to Allied Meat Industries Limited to avoid any liability for this tax.

Yours faithfully,
FLACK & FLACK.

ASSETS BACKING AND EARNINGS RATE.

Net assets backing is 5/6 for each 5/- share. Net profit for 1953 was equal to 29.2 per cent. on the paid capital of the company. The average profit for five years shows an earnings rate of 13.9 per cent. per annum.

DIVIDEND PAYMENTS.

The directors anticipate that dividends at the rate of 10 per cent. per annum will be paid on the ordinary shares of the company. Profits earned by the operating companies since 1st July, 1953, will accrue to Allied Meat Industries Limited and purchasers of the shares now offered for sale will participate in any dividends paid out of profits earned in the financial year 1953-54.

Coles Country Stores Limited

(Formerly F. & G. Stores Ltd.)

Proprietors of Chain Stores in Victoria, N.S.W., South Australia.

. **Office:** 282 Lit. Collins St., Melb. **'Phone:** MF 0351. **Directors:** E. B. Coles (Chairman), F. G. Coles, N. C. Coles, F. P. Derham, C.B., D.S.O., V.D., L. R. Robinson, F. O. Barnett (representing preference shareholders). **Auditor:** W. A. Reid.

Year ended June 30, 1953. Meeting September 16, 1953.

Following the sale of 59 properties and the warehouse not uired for leasing to G. J. Coles & Co. Ltd., trading activities the company have been discontinued, and earnings are now inly derived from rent from the remaining 32 stores leased G. J. Coles & Co. Ltd.

Preference dividends were more than twice covered, and no idend was paid on the ordinary shares.

In addressing shareholders at the Annual Meeting held on tember 16, the Chairman, Mr. E. B. Coles, reported as follows—

Net profit for the year from rentals of properties and interest, after providing for all expenses, amounted to £42,602, out of h your Directors have paid interim dividends of £9,500 and mmend the payment of final dividends for the year as follows—
On "A" preference shares 3½%—£3,500.
On "B" preference shares 3%—£6,000.
Provision for the dividends recommended has been made in accounts submitted and, subject to your approval, will be pay-on October 3, 1953.

Provision for Taxation

In the opinion of your Directors and the Company's Auditor, provision for Taxation is required in respect of this year's units.

Realization of Fixed Assets

Properties reported unsold last year, and the warehouse, to-er with old fixtures and fittings, have been disposed of and net profit from this realization viz., £17,107 has been transferred Assets Realization Reserve.

Modernization of Stores

Modernization of stores continues, the latest being the erection of a new building on the old site at Traralgon. A further amount of £15,841 for Repairs and Maintenance was added to Maintenance Suspense Account. The sum of £11,783 was transferred, in accordance with previously stated policy, from this account to Repairs and Maintenance in the Profit and Loss Account.

New Properties

Additional properties were acquired during the year at 174-178 Gray Street, Hamilton, and 523 Dean Street, Albury, this latter property adjoining that at present owned by the Company provides a more suitable frontage for trading purposes.

General

Your Directors continue to reduce mortgages whenever the opportunity arises and the reduction this year amounted to £36,767.

The vertical form of Balance Sheet and Profit and Loss Account has been chosen on this occasion to more clearly set out the financial progress made by the Company during this year.

Australian Foundation Investment Company Limited

Reg. Office: 375 Collins St., Melb. **'Phone:** MU 5392. **Directors:** S. Ricketson (Chairman), (alt., R. S. Clayton), G. G. Jobbins, Col. A. Spowers, D.S.O., M.C. (alt., E. A. Lloyd), Col. F. H. Wright, O.B.E., V.D. **Auditors:** Flack & Flack.

25th Year ended June 30, 1953. Meeting September 28, 1953.

Earning rate on average capital fell from 9.4% to 7.2%, and dividend was again 6%. At balance date 91.9% of the company's investments were in ordinary shares, as compared with 94.7% last year.

"Trade and industry should recover much of its buoyancy under the stimulus of the Budget concessions and rising national income, and company profits and dividends appear likely to maintain an upward course. If this proves to be so, then a progressive recovery in equity share prices should be seen over the next few months, which might be accelerated in the first quarter of 1954 if returns from wool, wheat and other primary products maintain satisfactory levels," said the Chairman, Mr. Staniforth Ricketson, in his address to shareholders at the Annual Meeting on September 28. His address reads:

It is the sad duty of the directors to place on record the loss of a most valued colleague and beloved friend in the person of Sir George Dalziel Kelly, who had been a director of the company since 1938. Sir Dalziel was a director of each of the other investment companies in the Capel Court Group, having joined the boards of the four oldest companies in September, 1938, and subsequently becoming a director of each of the newer companies as formed. During his association with the group, he made splendid contributions to the development of the various companies and to their prestige, just as he did in the many other spheres in which he was known as a man of outstanding ability and integrity.

To fill the vacancy caused by the demise of Sir Dalziel Kelly, Colonel F. H. Wright, O.B.E., V.D., accepted an invitation to join the board of this and the other companies. Mr. E. Aston Lloyd was appointed to act as alternate director for Colonel Spowers and Mr. R. S. Clayton was appointed as an alternate director for myself.

ACCOUNTS OF THE COMPANY.

Because the income-earning assets of investment companies like your own comprise a wide range of stocks and shares representative of practically every aspect of economic activity, it follows that the results achieved must reflect the general condition of trade and industry in the country in which investments are held. At the same time, since nearly 92 per cent of our total investments are in the ordinary stocks of some hundreds of companies, the effects of an adverse or favourable year on our revenue and profits may be delayed, because final dividends declared in respect of a particular year by many companies in which shares are held are frequently not distributed until after our accounts for that year have closed.

The accounts of Australian Foundation now before therefore, reflect in part the economic difficulties experie by Australia during the 1951-52 financial year and in only the results obtained in 1952-53, when a gradual imp ment took place.

RESERVES AND UNDIVIDED PROFITS.

Whereas in the 1952 year it was possible to add £3 to the general reserve from surplus revenue, in the year closed it was necessary to limit the increase in genera serve to £14,000. However, as a result of the conserv policy followed by the directors since the company was tered in 1928, total reserves and undivided profits now an to £253,657, comprising general reserve, £164,000; re appropriation account, £17,824; and investment fluctu reserve, £71,833.

These reserves and undivided profits are equal to ov per cent of the paid-up capital of £1,200,000, the earning of which is augmented materially by these funds retained net revenue in previous years. It should be noted that pa capital has remained stationary at the above figure, June, 1951, after having been more than doubled since 1946, when the total stood at £540,000.

AUGMENTING EARNING POWER.

In addition to the availability of retained profits to ment the earning power of the shareholders' capital, it practice of directors of investment companies like you to make use of a moderate amount of outside funds. The portion of such outside funds which investment com registered in Victoria are able to use is, however, limit statute.

As at June 30, 1953, the total of current liabilitie provisions had been increased by £23,927 to £346,509 by parison with the figure at the previous balance date. Th increase was brought about by the following moveme the various items:—

Increases in bank overdrafts by £50,353 to £201,860, securities bought but not delivered at the balance da £3,761 to £4,980, offsetting decreases in provision for ta by £1,162 to £13,989; loans against security by £8,2 £52,575; deposits by £20,469 to £618; and sundry credit £330 to £487.

Provision for dividend remained unchanged at £72,0

INVESTMENT PORTFOLIO.

Except for a total of £10,134, representing securities sold t not delivered at the balance date (£3,899), sundry debtors 2,949) and cash at bankers (£3,286), the whole of the funds nployed at the balance date were represented by investments a wide variety of securities. Individual investments numbered 7, as compared with 573 in 1952 and, of the total value, 91.9 r cent represented ordinary shares, 7.4 per cent preference ares and 0.7 per cent bonds and debentures. By investing the ajor proportion of the funds in equity stocks, shareholders are sured of maximum protection against currency depreciation, us opportunities of progressively reaping the benefit of the eat economic development which is taking place in Australia, which country all but a negligible proportion of the com-ny's funds is invested.

As you will all know, the level of share prices existing ring the last two years has been far below the peak attained 1950-51. Nevertheless the market value of the investment rtfolio as at June 30, 1953, showed an appreciation of 12,137, or 11.85 per cent, on the original cost figure of ,790,032. Since the balance date, under the stimulus of the dget Speech, improved seasonal conditions, satisfactory lance sheets and reports of better economic prospects, share ices have shown encouraging appreciation.

It is not wise to attach great importance to the market lue of an investment company's portfolio at any particular me. Such companies are permanent entities and are designed obtain the average benefits of the growth in the national onomy over a period of years.

Through allotments of rights or purchases in the market, e company in 1952-53 acquired a total of 61,287 new issue ares in 40 companies, together with £24,662 of registered nsecured notes and 35,969 share options in three other companies. The shares acquired included 7375 in bonus issues from six companies. Owing to the reduced calls for new ordinary capital made during the last two years, the number of new issue shares acquired was considerably below the totals of 426,181 in 1950-51 and 131,904 in 1951-52.

REVENUE AND EXPENDITURE.

Total income for the year ended June 30, 1953, showed a decline from £129,810 to £100,312 by comparison with the previous year. The main sources of revenue were dividends and interest totalling £109,019 (£134,965 in 1952), or, after deducting £8,832 interest paid on loan funds, £100,187, as compared with £129,791, when the company paid £5,174 in interest. Underwriting commission received amounted to £125 as compared with £19 in 1952.

Due to the existence of a central secretariat, which handles the administrative affairs of the eight companies in the Capel Court Group, management expenses are moderate. In the year under review, the main changes were as follows:—Rent, salaries, office and general expenses, increased by £195 to £10,388 and contributions to staff provident fund, increased by £67 to £470; taxation provision, reduced by £3,450 to £1,050, and audit fees by £10 to £340. Directors' fees remained unchanged at £1,500. As a result mainly of the reduced provision required for taxation, total expenses were £3,198 lower at £13,748.

Due to the factors enumerated, net revenue for the 1953 year was £86,564, as compared with £112,864 in the previous year. This represented earnings of 7.2 per cent per annum on paid-up capital as compared with 9.4 per cent in 1952. After providing for the maintenance of the 6 per cent dividend (requiring £72,000) paid in the previous two years, and transferring £14,000 to general reserve, £564 remained to be added to the revenue appropriation account, increasing the balance to £17,824.

SURVEY OF ECONOMIC CONDITIONS.

Changed Economic Outlook.

Since we last met twelve months ago, quite a transforma-on has come over the economic scene in Australia, and it ppears fair to say that conditions are appreciably better oday than appeared possible at that stage. Many great prob-ms still confront trade and industry in this country, but nfidence has been at least partially restored, and there is reater degree of economic stability than existed two years or ven one year ago.

This general improvement has arisen largely from fortuitous rcumstances—the continuation of splendid seasons, high levels f primary production, and the maintenance of satisfactory rices for Australia's main export commodities. At the same me, some of the measures adopted by the Commonwealth overnment have partially achieved their objectives, whilst anagement in trade and industry has sought to grapple with roblems which were retarding progress. Except for isolated rikes, this country has enjoyed an almost unparalleled period industrial peace, and the community as a whole has shown greater tendency towards conscientious endeavour and thrift, ough in these respects we are still a very long way from ie ideal.

ncouraging Lead by Government.

The most enheartening development which has occurred ring the past year or so has been the lead given by the mmonwealth Government through the substantial taxation id other concessions announced in the Budget Speech on ptember 9. In this speech the Treasurer, Sir Arthur Fadden, imed that, as a result of the measures instituted since April, 51, the Government had now "practically attained that sta-lity we set out to achieve in the strenuous days of 1950 and 51." He said that the rise in costs had been slowed down. ttlenecks had vanished, practically all kinds of supplies had come plentiful, and unemployment, which had developed dur-g the period of readjustment, was lessening.

Sir Arthur further pointed out that retail prices had risen only 4 per cent in 1952-53 as compared with approximately per cent in each of the preceding two years, and that olesale prices had actually fallen slightly, after rises of 24 r cent and 16 per cent in 1950-51 and 1951-52 respectively. The rise in wage levels had been checked, he said, and in 1952-53 represented only 5.7 per cent as against 17.4 per cent in 1951-52. There had also been notable improvements in the output of many basic materials, whilst, on the primary production side, the financial year just closed had been one of the most remarkable years on record, due partly to a good season but also partly to a permanent gain in productivity.

Even though, in the light of the not-far-distant Federal general elections, some critics will accept Government claims with reserve, there can be no doubt that the recent Budget was one of the most timely and stimulating ever presented in the Federal Parliament. The benefits of the concessions will be felt by practically every industry generally. The extent to which they result in a more stable economy and pave the way for continued national development will be governed by the manner in which the reductions in taxation are reflected in price levels and in a general lowering of production costs.

Although the tax remissions equal £118.4 million for a full year, or £81.5 million for the balance of 1953-54, the Treasurer anticipates that revenue will be £6 million greater (at £982 million) than in the previous year. Estimated expenditure will be greater than actual expenditure in 1952-53 by some £7 million, but a small revenue surplus of £215,000 has been forecast. Obviously, the Treasurer believes that, with the continuance of high output of and prices for primary products, plus the growing benefits of the substantial increase in population since the war, incomes in total will be well up around the 1952-53 figure, or possibly greater. In effect, he is budgeting for a further rise in national income, which last year approximated 10 per cent. With the progressive relaxation of restrictions on imports, also, customs revenue is expected to exceed last year's receipts by some £12 million.

Substantial Tax Cuts.

Major interest has naturally centred around the handsome cuts in taxation which have been promised in the Budget. In 1952-53, the special 10 per cent levy imposed in the previous year, was removed, bringing personal tax rates back to the level existing in the 1950-51 year. Then, in the recent Budget, it was announced that, for 1953-54, taxpayers would be given

(Continued on next page)

AUSTRALIAN FOUNDATION INVESTMENT CO. LTD. (Contd.)—

reductions averaging around 12½ per cent on the rates payable in the previous year. Consequently, after allowing for the removal of the 10 per cent special levy last year, the rates to be paid in 1953-54 will represent an average cut of around 20 per cent as compared with those paid in 1951-52. Concessional allowances for a wife or similar dependant, and for medical and educational expenses have also been increased.

Calculating on the basis of concessional allowances for a wife and one child, a taxpayer with an assessable income of £1,000 will, this year, pay only £76 in income tax, as against £94 last year and £103 in 1951-52. On £2,000, this year's tax on the above basis will be £339, as against £395 in 1952-53 and £435 in 1951-52; on £5,000, £1,739 as against £1,973 and £2,170 respectively; and on £10,000, £4,895 as against £5,488 and £6,037 respectively.

In a number of categories tax reductions will be further increased by other readjustments of tax rates. For example, whereas formerly income in excess of £10,000 attracted a rate of 15/ in the £, the base has now been raised to £16,000, and the scale adjusted so that the maximum rate payable on income above that figure will be 14/ in the £. The differential rate of from 4d. to 16d. in the £ over and above the personal exertion rate on income from property, such as rent, interest, and dividends, has also been abolished.

Public Company Rates Lower.

The appreciable cuts made in public and private company tax rates came as a pleasant surprise to company directors and managers, and to the general body of investors, particularly as they were accompanied by reduced liability for payroll tax and sweeping cuts in sales tax. For the 1949-50 year of income, public companies were required to pay 5/ in the £ on the first £5,000 of income, and 7/ in the £ (including 1/ supertax) on the balance over £5,000, plus 2/ in the £ undistributed profits tax. For the following year of income (1950-51), the supertax and undistributed profits tax were abolished, and public companies were required to pay an over-all rate of 7/ in the £ on the whole of their distributable profits, plus a "special contribution" of 2/ in the £. They also had to make an advance payment of 10 per cent in respect of 1951-52 profits which, however, would be credited to them in that year. In the 1951-52 year of income, the advance payment was discontinued, and the rate of primary tax on the profits of public companies became: 7/ in the £ on the first £5,000 and 9/ in the £ on the balance over £5,000.

Under the new Budget schedule, the primary rates applying to public company profits in the 1952-53 year of income, have been reduced to 6/ in the £ on the first £5,000 and 7/ in the £ on the balance. An examination of the amounts provided for taxation by public companies suggest that, in broad terms, the average reduction in tax provisions will work out at around 22 per cent. In the case of many companies, this would mean that their net earnings on ordinary capital, after public company tax, would be increased by 5 per cent per annum or more. The new public company tax rates apply to income for the year 1952-53, involving many readjustments of tax provisions and net profits in balance sheets already issued.

Relief for Private Companies.

Private company earnings in the 1952-53 year of income will be subject to tax at the rate of 4/ in the £ on the first £5,000 of income and 6/ in the £ on the balance over £5,000. This represents a reduction of 1/ in the £ by comparison with the previous two years. Prior to June 30, 1951, undistributed profits tax was levied on private companies at relative shareholders' individual rates, but, for the last two years, the undistributed profits tax has been levied at the flat rate of 10/ in the £ after deducting a permissible "retention" allowance. Under amendments made last year, investment income could not be included for the purpose of calculating retention allowances. Recently, however, the position was reviewed and, under the new Budget proposals, private companies will be allowed to retain 10 per cent of distributable income from property, except dividends from other private companies. This arrangement will apply to income for the year ended 1952-53 and for future years.

In the 1952-53 legislation, a period of five years to Decem 31, 1957, was allowed for the distribution of tax-free divide to shareholders of private companies. These dividends are c tributed out of accumulated funds on which tax at shareholde individual rates has been paid by the private companies. T period has now been extended by a further five years December 31, 1962.

Sales Tax and Other Concessions.

Rates of sales tax were materially increased in 1951- and exercised an important influence on the prices of a w range of goods, thus serving to restrict the free flow of tra and contributing towards the rise in living costs. The Treasu has now announced the abolition of the 50 per cent, 33⅓ cent, and 20 per cent rates imposed. The majority of goods those categories will, in future, be subject to a rate of per cent or less, whilst a number in the former 20 per c classification will be transferred to the general rate of per cent. Several classes of goods will be exempt from sa tax altogether.

Already, these changes have had a stimulating influe and widespread advertisements have appeared in the ne papers throughout Australia announcing material price ductions in numerous classes of goods. A further advanta is that orders placed with manufacturers for goods subject heavy sales tax, which had been banked up for some mon in anticipation of a revision, are once more beginning to fl

A source of considerable irritation and increased costs employers in recent years has been the imposition of onerous payroll tax on wages and salaries paid by them. had been hoped that the Government would abolish this iquitous impost, but the most it has consented to do is to ra the maximum exemption from £1,040 to £4,160 per annu in other words, where formerly all employers who paid m than £20 per week in wages were subject to payroll tax, from October 1 this tax will be levied only where the pay exceeds £80 per week. The concession will mean that m than 50,000 of the 90,000 employers in Australia who h been paying the tax will no longer be required to do so.

Revised schedules of estate duties, and customs, excise primage duties will give further relief to the community. the outset, the decision to abolish the entertainment tax hailed with delight, but the State Labor Governments stepping in, just as they did when the Commonwealth G ernment abandoned Land Tax, and are entering the field entertainment tax to swell their own incomes. I do not pose here to make more than this passing reference to fact that the Budget proposals include some increases in invalid and repatriation pensions and other concessions various sections of the community.

Labor Criticism of Budget.

In his role as Leader of the Labor Opposition Dr. H Evatt has made a determined attack on the Budget and sought to show that recipients of the basic wage are paying a higher amount of taxation than in 1949, when Labor Party was in power. This argument, however, is untenable, because it ignores the fact that, since 1949, basic wage has risen by some £5/7/ per week. Dr. Evatt also severely criticised the Government for making only m rate increases in age, invalid and other pensions, despite fact that pension rates have been increased by 27/6 du the four years' Liberal-Country Party regime. He pron that, if Labour were returned to power at the next elect pension rates and the permissible additional income of sioners would be increased; also that child endowment other welfare benefits would be raised.

Whilst this is no place to embark on a political discus it is appropriate to point out that such increases coul encompassed only by a substantial rise in taxation rates the greatly extended use of inflationary Treasury Bill fin In commenting on the 1952-53 Budget in the House of R sentatives in August of last year, Dr. Evatt made it perf obvious that the Labor Party stood for a cheap money an employment policy and that it would implement that poli the lavish use of Treasury Bills. Such a procedure, in ess would represent taxation in another form because it

erve to inflate the currency and depreciate the purchasing ower of the Australian £.

eavy Demands of States.

Whilst revenue and expenditure, and the means by which ie Government finances current Commonwealth activities ust be amongst the prime considerations in the formulation the Budget in each year, there are other aspects of Gov-nment financing which have an equally important influence the national economy. As a result largely of two major wars ie Commonwealth Government has become the tax collector r all the States, as well as itself, and the co-ordinator and ranger of loan finance for both State and Commonwealth rposes. Indeed, despite the restrictions on Commonwealth overnment functions imposed by the Constitution, the Com-onwealth Government has perforce had to accept the role "good provider" in respect of State requirements—together ith the odium attaching to any taxing and borrowing authority.

All of us must necessarily have sympathy for the various tate Governments, which have found themselves called upon provide facilities and services for populations far in excess anything contemplated prior to the war. In pursuance of eir great responsibilities, they have made steadily increasing emands on the Commonwealth. These demands reached such agnitude, and the Commonwealth was submitted to such an alanche of criticism by State Ministers, that, last year, the ime Minister, Mr. Menzies, announced that it was proposed pass back taxing responsibilities to the States. The latter, owever, were not prepared to resume these responsibilities with the odium which naturally attaches thereto.

For several years now, the Commonwealth has been required make special and increasing grants to the States from xation revenue, over and above those provided under the x reimbursement formula. The manner in which the payments the States have grown during the last few years is demon-rated by the following figures:—

PAYMENTS TO OR FOR THE STATES

£'s Million	1950-51	1951-52	1952-53	1953-54 (Estimated)
ax Reimbursement Grant ..	75	86	109	121
pecial Financial Assistance Grant	15	34	27	22
ther Special Grants	12	10	16	15
ayments under Financial Agreement (Interest and Sinking Fund)	10	10	11	11
ther Payments	16	21	20	20
TOTAL PAYMENTS TO STATES	128	161	183	189

Thus, in the four years the present Government has been office, it has increased the payments to the States by £61 illion to £189 million per annum, or by nearly 50 per cent.

tates Loan Programmes.

This, however, is only part of the story, as the Common-ealth has also been called upon to make substantial contri-utions towards the financing of the States' Loan programmes capital works. In order to do this, the Commonwealth has recent year adopted the practice of financing its own capital orks expenditures almost wholly from revenue, having pro-ded for this purpose, £73 million in 1950-51, £110 million in 51-52, £103 million in 1952-53 and £101 million for 1953-54. In is way it has been possible to leave the public market practi-lly free to meet the requirements of the various States. The ommonwealth has gone even further by providing large sums ther from revenue or from other Commonwealth sources to ake up the deficiency between actual new money loan rais-gs and the total yearly borrowing programme approved for tate works.

During the past-war period, the loan requirements of the ates have been steadily increasing, and the difficulties of taining anything like the amounts required has become pro-essively greater, owing to the depletion of investable funds the hands of the public. In respect of the 1951-52 year, the an Council approved a borrowing programme totalling £225 illion for Commonwealth and State purposes. The Common-ealth guaranteed the total amount, and, as loan raisings dur-ing the year fell far short of £225 million, it was called upon to provide the deficiency of £160 million from Commonwealth resources. This was done in the form of a "special" short-term loan, of which £98.5 million represented the Budget sur-plus, £27 million, the Australian currency proceeds of dollar loans and £34.5 million the investment of Commonwealth Trust Fund moneys.

Loan Raisings in 1952-53.

When the Loan Council met in May, 1952, to consider the borrowing programmes for 1952-53, the Prime Minister, Mr. Menzies, made strenuous efforts to induce the States to reduce materially their requirements for that year and said that his Government would not again accept the responsibility of pro-viding from Commonwealth revenue a substantial sum to meet the loan requirements of the States. Nevertheless, the Govern-ments of the various States exercised their majority voting power to approve Government loan programmes totalling £247 million in respect of 1952-53. The Commonwealth Government refused to accept responsibility for more than £190 million and made it clear that Commonwealth assistance would be limited to a maximum of £135 million, which would be reduced by any amount by which public borrowings exceeded £55 million. In view of the fact that the Commonwealth had budgeted for only a nominal revenue surplus of £460,000 in 1952-53, it then seemed probably that anything up to £135 million might have to be provided by means of a substantial increase in the Treasury Bill issue.

During 1952-53, two Commonwealth loans were issued seek-ing a total of £97 million. Both of these issues resulted in small over-subscriptions, the total amount received being £99 million (£36 million in conversions and £63 million in new cash). After paying out non-converters, an amount of £52 million in new cash remained, and this was further increased to £59 million by unspecified "domestic" loan raisings by the States, totalling £7 million.

To implement its guarantee, the Commonwealth was thus required to find slightly over £131 million, of which £8 million was provided by Commonwealth "domestic" loan raisings, from the Commonwealth Bank. The net balance of £123 million again took the form of a "special loan" issued in June, 1953, subscriptions coming from the following sources:—(a) Austra-lian currency proceeds of International Bank Loans, £18.5 million; and (b) Commonwealth Trust Fund moneys, £104.5 million. It is shown in the statements attached to the Budget Speech that: "Securities for the special loan of £123 million were identical with the terms of the securities issued in connection with the public loan floated in March, 1953. No contribution was made from Commonwealth revenue.

Additions to Listed Issues.

Public and "domestic" loan raisings of the Commonwealth and States during 1952-53, plus the special loan of £123 million issued from Commonwealth sources to make up the deficiency in public loan receipts for the States, are reflected in the increased totals now shown for certain Commonwealth loans listed on the Stock Exchanges. For example, the 2 per cent 15/4/54 issue has been increased by £3 million and the 2 per cent 15/11/54 issue by £4 million. Moreover, although the amount raised by the public issue in November-December, 1952 (4½ per cent 15/9/61), was only £20,270,000, the total of that issue is now shown at £24,671,110, or £4,401,110 greater. Similarly, although total public subscriptions (cash and con-version) for the 3 per cent 15/12/55 and 4½ per cent 15/9/62 issues raised in March-April 1953 were £79,230,000, the totals listed for those two issues are now shown at £206,241,540 (3 per cent £83,177,000, and 4½ per cent £123,064,540).

From the details provided in the statements attached to the Budget Speech, it is impossible to reconcile these figures, but, as previously indicated, it is disclosed that securities for domestic loan raisings from the Commonwealth Bank (£8,646,000) were obtained "against the issue of inscribed stock of varying maturity dates." Similarly, the terms of the special loan of £123 million provided from Commonwealth sources to meet the guarantee to the States were identical with those of the public loan floated in March, 1953.

(Continued on next page)

AUSTRALIAN FOUNDATION INVESTMENT CO. LTD. (Contd.)—

Reductions in the totals of all listed Commonwealth loans are made from time to time as a result of redemptions by the National Debt Sinking Fund. These usually follow a fairly steady course, but it is noted that, between December, 1952, and June, 1953, the total of the 3¾ per cent 1952-54 issue fell by over £6 million to £63 million, indicating that portion of this loan held by particular interests had been redeemed during the last financial year.

The size of each loan issue in which public dealings take place is of great interest and importance to holders and potential investors. Consequently, it is reasonable to suggest that, where special loan operations off the public market swell the total of listed loans, the Commonwealth Treasury should supply expicit details for the guidance of the investing public.

Increase in Treasury Bill Issue.

The amount of Commonwealth Trust Fund moneys invested in the "special loan" was considerably greater than in 1951-52 —£104.5 million, as compared with £34.5 million in the earlier year. The statements attached to the latest Budget Speech show that "some of the Commonwealth Trust Fund balances invested in the 'Special Loan' had, in earlier years, been used to redeem Treasury Bills, and it was necessary, therefore, to re-issue Treasury Bills to the extent of £72 million to enable those particular balances to be invested in the loan." It would, therefore, appear that, after rising by £45 million to £153 million between June, 1951, and June, 1952, the total of Treasury Bills was increased further in 1952-53 by £72 million to £225 million, which means that the issue has been more than doubled in the last two years. This is confirmed in the annual report of the chairman of the Commonwealth Bank.

Whilst the increase in the financial year ending June 30, 1953, was considerably less than was anticipated twelve months ago, it is disturbing to find that the use of this inflationary type of finance is continuing to grow. In his Budget Speech, Sir Arthur Fadden gave no real guidance as to the trend of Government policy in this regard in the future, contenting himself with the general statement that:

> To the extent that the (Trust Fund) balances so invested had previously been used temporarily to redeem outstanding Treasury Bills, it was necessary to re-issue Treasury Bills to make available the funds required. Similar arrangements will probably be necessary this year, although the amounts will be smaller, and the amount of bank credit required is expected to be less than in 1952-53.

We may extract some comfort from this inadequate statement, but, at the same time, the probability seems to be that further currency inflation will result from another rise in the Treasury Bill issue in the current financial year.

Loan Programme for Current Year.

As in 1952, the States, at a Loan Council meeting held in May, 1953, used their majority voting power to approve a total borrowing programme of £231 million for 1953-54. The Commonwealth Government, however, announced that its support would be limited to a total of £200 million, as against its guaranteed figure of £190 million in 1952-53. The Treasurer further stated that, whereas in the previous year the Government had accepted the responsibility of providing up to £135 million from its own resources to augment public borrowings, its guarantee in respect of 1953-54 would be limited to £95 million, to be reduced by any amount by which public borrowings exceeded £105 million.

From the foregoing, it is apparent that the Commonwealth Government anticipates that appeals to the public loan market in the current financial year will be more fruitful than in the preceding two years. Apart from the £105 million of new money required the Commonwealth will need to provide for the conversion or redemption of loans totalling £45 million maturing during the year. On present indications, therefore, it would appear that the borrowing programme for this year (for cash and conversion purposes) will approximate £150 million, as compared with £155 million sought in 1951-52 and £97 million in 1952-53, when the amounts actually subscribed were £135 million and £99.5 million respectively.

Consequently, this year's programme seems likely to be more ambitious than it was in 1952-53, particularly as, if market conditions prove favourable, the Commonwealth ma seek new moneys in excess of the proposed £105 million, ar so reduce its liability to provide up to £95 million from Con monwealth sources. Actually, the position is more favourab for Commonwealth loan raisings than it has been during th last two years, because of the much more realistic terms whic have been adopted.

Gradual Restoration of Confidence.

In 1951, public confidence in Commonwealth loans wa rudely shaken by official statements and the fact that holde of maturing loans had had the chagrin of seeing an increa in the Commonwealth long-term rate to 3¾ per cent son months after they had been induced to convert at 3½ per cen As a consequence, two of the three loans issued in 1951- at 3¾ per cent for 11-14 years, or 2 per cent for two or thr years, were materially undersubscribed.

Even strong (and quite legitimate) official support in t market failed to turn the tide of public opinion, and the a nouncement that the small new money loan of £20 million to launched in November, 1952, would carry the increased coup rate of 4½ per cent for a reduced currency of nine years d not result in more than a mediocre success. More vigoro loan-raising methods were adopted in respect of the next iss —a conversion and cash operation at 4½ per cent at par for years, or 3 per cent at £99/10/ for two years and eight month to give a yield to redemption of £3/3/10 per cent per annu As a result, and with the help of the better public sentimen over £79 million was subscribed in respect of the total of £ million sought.

From that time onwards, there has been accumulating e dence of steadily growing confidence in gilt-edged securiti and a greater appreciation of the fact that the 4½ per ce rate is most attractive under present conditions. This improv sentiment has been reflected in the market for Commonwea loans, which has maintained a firm tone for many mont Indeed, recently the average yield available from all Co monwealth loans with maturity dates in 1956 or later fell around £4/5/7 per cent. A gratifying feature has been strong re-entry of the public into the market as buyers Commonwealth issues, and, whereas last year official buyi on behalf of the National Debt Sinking Fund and the Co monwealth Savings Bank predominated, for some months n public buying has represented most of the daily turnover Commonwealth loans on the Stock Exchanges.

Commonwealth Loan Attractive.

The terms of the first Commonwealth Loan to be iss in 1953-54 have now been announced, and the authorities to be complimented on their wise action in maintaining 4½ per cent rate for the long-term section of the loan— currency of which has been extended from 9½ years for issue in March-April last to 13 years for the current iss The short-term section offers 3 per cent at par for two ye a slight tightening in the terms since the previous iss Applications are also being invited for a conversion loan £32,921,000 on either of the above optional terms.

Public attention is being concentrated on the new mo issue, which is for £50 million, or nearly half the minim new money loan raisings contemplated during 1953-54. In v of existing conditions, and the benefit obtained from the rebate of 2/ in the £ on interest derived from Commonwe loans, this new issue represents an outstanding investm The 4½ per cent rate is the highest offered by a new C monwealth loan for 22 years, and, on present indications, prove to be the best rate which will be obtainable from A tralia's prime gilt-edged security for a long time to co Certainly, if, as appears likely, a resounding success is achie this may mark the turning point in interest rates, with probability that the next Commonwealth loan will be issue a lower rate.

The implications are plain for all to see, because, if inte rates do recede as anticipated, investors in the current C monwealth loan will have an experience which has been de to them over the last 2½ years. In other words, they will h the gratification of seeing their holdings go almost immedia to a material premium, whereas, the almost invariable

rience in recent years has been for new loans to be quoted a discount soon after each issue has been completed. In ese circumstances, investors may subscribe to the new loan th complete confidence. Apart from its investment merits, e overwhelming success of the loan would mark an important rward step towards the stability of, and ultimate reduction , interest rates, and to a general restoration of confidence so sential to continued economic development.

Whilst the Commonwealth authorities are to be applauded r their practical approach to the new loan, there is one rticular aspect of the terms, which I feel is open to grave iticism. I refer to the provision that "excess subscriptions will retained." Each loan should be for a definite amount on rms appropriate thereto, and no applications in excess of at amount should be accepted, as this, in effect, consititutes breach of the original contract. Moreover, if investors are ut out from one loan, the natural effect would be to make em more keen to obtain allotments in the next issue, provided e terms were satisfactory to them.

cilitating Bond Dealings.

It is gratifying to notice that the Commonwealth Govern-ent, presumably with the co-operation of the States, has barked upon a campaign of newspaper advertising to edu-te the public as to the nature and investment merits of mmonwealth loans. In relation to the vast sums required nually for large development works, particularly by the ates, the effort must be regarded as a very modest one. Still, is a start in the right direction. Statisics of trading bank and vings bank deposits show that there is no shortage of funds, d it is obvious that what is needed is to be able to inform d convince a worthwhile proportion of the owners of those llions of the attractions of gilt-edged investments.

A necessary corollary to this educational campaign would pear to be that all possible facilities should be provided for aling freely in large or small amounts of Commonwealth ans, both on the buying and selling side. Moreover, no re-rictions should be placed on any section of investors, even ough such restrictions may merely take the form of moral asion or special "appeals" to lodge subscriptions to new ues or not to sell large parcels of loans.

It is desirable that the Commonwealth loans market should organised in such a way that it will function freely and be resilient as to be capable of absorbing quickly any volume selling, from whatever source or to any desired amount. a market so organised, there should be no need for the ime Minister or the Federal Treasurer to make special per-nal appeals to large institutions for support, or to request em urgently not to sell Commonwealth bonds.

Not only should the authorities and the other parties refrain om placing themselves, or allowing themselves to be placed, in ch an invidious position, but it should also be recognised that e mere fact of such moral suasion being exercised must act a hindrance to the development of a really free bond market. en the receipt by a holder of a large block of a maturing loan a personal appeal from someone in authority to convert his lding reacts disadvantageously to Commonwealth loans as a ort-term investment. Furthermore, the fear that such an peal might be made, and that some official odium might be curred if it be rejected, may act as an obstacle to a greater velopment of the use of Commonwealth loans, maturing in e, two or three years, as a repository for short-term moneys.

In comparison with Britain and the United States, and even th Canada, the market for government bonds in Australia ems capable of further development on a broad and liberal ale. It is a big subject, and what is needed is a large-minded titude, supplemented by the creation of special facilities for couraging and assisting large dealings.

nada Supplies a Lead.

Only a few years ago, Canadian authorities realised that ich might be done, and should be done, to popularise the use government bonds, particularly on a "grand scale," and to courage the development of a really free market. For many ars the Bank of Canada, the official Central Bank, had prac-ally been the market for Canadian government bonds, but this was found actually to have a stultifying effect. Measures, therefore, were taken to form an inner circle of a dozen investment houses to act as large-scale dealers in government bonds and "make the market," with an outer circle of several hundred investment houses to deal direct with the inner circle either buying or selling for any required amount.

Cheap and liberal finance is provided by the Central Bank for the major dealers as one means of helping along the official objective of a wider and freer and more popular market. Of course, all this connotes that, at times, the inner group of investment houses should carry, as principals, very large amounts, in the aggregate, of Canadian government bonds and, indeed, it is known that, at times, they do so. Dealings are thus facilitated. Any amount can be placed immediately.

It is obvious that the mere fact of having conceived, encouraged and assisted the scheme for the selected investment houses to carry large amounts of bonds as principals places an obligation upon the Central Bank to ensure that these chosen few should come to as little harm as practicable in shouldering these large commitments. For example, if, say, the government, in consultation with the Central Bank, is considering raising the new money rate of interest, one can imagine the Central Bank advising its co-opted group that it might be in their interests to "shorten sail" for the time being, that is, to reduce their holdings to manageable day-to-day proportions.

Broadminded Approach Needed.

If the bank did not do so, it can well be imagined that a sudden lift made in the interest rate by the government would have grave, if not disastrous, consequences to those big professional dealers who were carrying large stocks. That would be very bad for them, but the worst result would be that the great marketing scheme, so carefully and patiently built up, would collapse immediately. It might be very many years before the government and the Central Bank could find another group of investment houses prepared to accept a partnership in any such proposition, and then only on guaranteed safeguards against any such similar happening. One can see that, if Australia were to embark upon any such scheme, there would need to be a big, broadminded mental attitude on the part of the authorities and the closest confidence between all concerned.

It is, of course, a natural procedure in any scheme, as outlined, that the selected dealers should not only at times carry large amounts of government bonds, but that also at times they might be oversold large amounts of bonds. In Canada, this is freely recognised and permitted. More than that, the Central Bank will arrange, on liberal terms, for the oversold dealers in the chosen group to obtain the bonds necessary for delivering to complete their "short" sale. This is a great facility for dealing.

In London, "short-selling" of British government loans, as of any other securities, is recognised as not only a natural procedure for the jobber, it is obligatory upon him to do so at times if he is to function as a jobber. Certainly, he has the privilege of making the price at which he will deal, but it is not considered that there is anything heinous in the jobber "short-selling" British government stock any more than any other security. Officialdom seems to recognise that the market for government stock has to find its own natural level, just like all other listed securities, and the freer the market the better it is for government loans.

Although these overseas examples are cited as means of developing greater freedom in the market for Commonwealth loans in Australia, it must be stated that the market is already reasonably free. This happy condition, however, must be ascribed more to the enterprise of the big dealers on the various Stock Exchanges than to any practical encouragement and assistance given by the authorities. In fact, in comparison with facilities officially given to chosen dealers abroad, it must be admitted that little of that nature has yet been developed in this market.

British Bank Rate Reduced.

The brighter outlook in regard to interest rates in Australia is in keeping with overseas trends. Only recently, the Government of the United Kingdom announced that the bank rate had been reduced from 4 per cent. (to which it had been

(Continued on next page)

AUSTRALIAN FOUNDATION INVESTMENT CO. LTD. (Contd.)—

increased from 2½ per cent. in March, 1952) to 3½ per cent. This reduction came as a refreshing draught to the investment market in the United Kingdom and to trade and industry generally, as it reflected the steadily growing strength of sterling and represented a further step towards the ultimate goal of free convertibility and the restoration of flexibility in interest rates. An important aspect of the change is that it illustrates the realism shown by the authorities in the United Kingdom in the fixation of interest rates. The Bank of England described the change as a "technical adjustment made to ensure that the bank rate does not get out of line with market rates." This provides a lesson for Australia, where the return of confidence in gilt-edged securities was long delayed through failure to adopt loan terms in conformity with general money market conditions.

Simultaneously with the reduction in the British bank rate, France took identical action, and this served as a further stimulus to confidence. The reaction of the City of London to the reduction in the British bank rate was immediate and striking. It was manifested in a swift rise in war loans and in other gilt-edged stocks, accompanied by greater activity and increased prices for a wide range of industrial shares. These events give a preview of what may well occur in Australia when the stage has been reached at which it is possible to commence a downward movement in interest rates. Provided the new Commonwealth loan achieves an outstanding success, that stage may not be very far distant. These considerations suggest that investors would be well-advised to take full advantage of the opportunities presented in the near future for investment in fixed interest stocks as well as paying increasing attention to sound equities.

Public Body Loans.

In addition to the loan requirements for State Government purposes, considerable sums are required each year for important semi-governmental bodies and local authorities in the various States. These loans have passed through many vicissitudes during the last few years. Since mid-1951, the coupon rate for public loans for semi-governmental authorities has been raised progressively from 3½ per cent. (for those carrying a government guarantee) and £3/12/6 per cent. (for others), first to £4/2/6 per cent. and then to £4/10/- per cent., later to £4/12/6 per cent., and finally to £4/15/- per cent. From the time of the increase in the rate to £4/2/6 per cent., in September, 1951, no official distinction has been drawn between loans carrying a government guarantee and others bearing no such guarantee.

The terms of public body loans are firmly controlled by the Loan Council, in which the various State Governments have a dominating voice. These governments showed extraordinary reluctance to face up to the realities of the position which has existed in the money market during the last few years and only grudgingly stepped up the permissible rate after each new rate had resulted in a succession of failures. Due to a number of factors, the £4/15/- per cent. rate, which has been the approved rate since October, 1952, has recently met with a greater measure of success, which has been aided by the provision of optional and, in some cases, much longer, currencies, extending up to 25 years. Apart from public loans for these bodies, greatly increased attention has been paid to private loans on their behalf, for which a coupon rate of £4/17/6 per cent. is allowed by the Loan Council for currencies extending up to 25, and even to 30 years in some isolated cases.

The borrowing programmes of public bodies are not subject to proper co-ordination, and the total permissible loan raisings on their behalf are embodied merely in a loose "Gentlemen's Agreement." Experience in recent years has been that the amounts so stated have been far in excess of practicable loan raisings from the market. For 1952-53, the amount stated as permissible loan raisings under the "Gentlemen's Agreement" was £128 million, comprising £110.5 million for "semi-governmental bodies" and £17.5 million for "other semi-governmental and local authorities." Unfortunately, official statistics are not available to indicate the actual amount raised under these heads, but, in the 1953 report of the Commonwealth Bank, it is stated that approximately £90 million in new money was raised for these bodies in 1952-53, as compared with only about million in 1951-52.

Requirements for 1953-54.

The programme approved for 1953-54 under the "Gen men's Agreement" is £90 million, which is approximately eq to the amount actually raised in 1952-53 but is some million below the total approved by the Loan Council in latter year. Whilst it is undoubted that interest rates g erally have reached a stage of much greater stability, anc seems likely that the Commonwealth loan rate may be proaching a downward turning point, a further radical cha in conditions may be necessary before the public bodies can assured of their full approved requirements for 1953-54.

Much of the trouble in this field arises from the arbitr official control maintained by the Loan Council over the te for public body loans. One major drawback is that no of demarcation is drawn as to the relative importance credit rating of the various bodies. Thus, lesser-kn borrowers are expected to raise their loans on terms ident with those of outstanding borrowers, such as the State E tricity Commission of Victoria and the Metropolitan Wa Sewerage and Drainage Board, Sydney, which are conduct operations of great magnitude and, over the years, have b up a substantial following.

A first step towards more effective loan raisings for pu bodies would be a provision that differential rates should permitted for borrowers of differing calibre. Indeed, the n rational way of meeting the situation would be to termi official dictation as to the terms allowed for these loans, that were done, money market conditions, as reflected by c petition between experienced underwriting houses, wo quickly bring order and balance into the public body market.

Other Fixed-Interest Loans

Due in part to the easier banking position, new issue company debentures, the rate for which is officially pegge 5 per cent., and unsecured registered notes, at the maxir permissible rate of 6 per cent. have recently been fewer they were some time ago. However, with the improved p pects for trade and industry, it seems likely that a nur of companies may be requiring capital of this type in the far distant future.

One of the most interesting and significant developm which have occurred in the financial sphere in Australia f long time has been the recent appreciable expansion of short-term money market. The absence of such a marke any magnitude has been a serious deficiency in the Austr financial system, as facilities have been lacking for the porary employment by companies and institutions of f which are being held for investment in some specific direc within a limited period ahead.

The recent development has been due largely to the e prise of great hire-purchase houses such as Industrial Ac ance Corporation Limited, Australian Guarantee Corpor Limited, and General Motors Acceptance Corporation Pro tary Limited, whose lead has been followed by a numbe other similar organisations.

General Economic Outlook.

The general trend of economic affairs in Australi 1952-53 was aptly described by Dr. H. C. Coombs in his rece issued report as Chairman of the Commonwealth Bank, a year of transition and adjustment." It might be added tha year also saw a definite improvement in the economic pos and a gradual restoration of confidence, which has since further stimulated by the Budget concessions. The pre financial year had ended on a note of uncertainty and fusion, with trade and industry faced with considerable lems, tremendous accumulations of stocks, and declining em ment, bank deposits and bank liquidity down, and a ge falling off in demand for a wide variety of goods. The s import cuts imposed by the Commonwealth Governmer March, 1952, had not as yet had an appreciable effect or volume of goods which had flowed into Australia during earlier part of 1951-52, and, with lower export income,

lia's International Reserves had fallen by £481 million to e low level of £362 million.

The period from June to December, 1952, marked a time of ntinuing uncertainty and readjustment, but, with another endid season, and particularly the upturn in wool prices a re confident outlook began to develop in the early months 1953. That attitude ultimately proved to be justified by the ge increase in primary production and in export receipts refrom. This in turn began to be reflected by degrees in de and industry generally, and, with the continued curtailnt of imports, the 1952-53 year ended with a record overs trade balance, which resulted in an increase of £186 llion in Australia's International Reserves to the very satistory figure of £548 million as at 30th June last.

eater Bank Liquidity.

Effects of this general change in the position were manited in many directions, first of all in a significant increase bank deposits and the liquid assets of the trading banks, ich, by October, 1952, had risen to 22 per cent. of their deits. Also, the Special Accounts of the trading banks lodged h the Commonwealth Bank had been gradually released to ble them to meet the greater demands made on their funds finance imports. By October, 1952, these Special Deposits re equal to only 12 per cent. of trading bank deposits as npared with 43 per cent. a year earlier. As stocks were ared, bank advances began to fall, and, by January last, the uid assets of the banks had risen to the high level of 30 per t. of their deposits. As the Commonwealth Bank had not that stage renewed its calls to the Special Accounts, the ratio these accounts to the total deposits of the banks was still und 13 per cent., only slightly higher than in the preceding tober.

In his report as Chairman of the Commonwealth Bank, Dr. mbs states:—

> It was then clear that the rise in public and bank liquidity would continue for some time and that the monetary conditions for renewed inflation were in danger of being re-established. Consequently, a substantial part of the additions to the banks' cash was called to Special Account. At the same time, the banks were left with ample funds to permit the financing of advances currently acceptable to them. The liquid securities of the major trading banks rose during the financial year from 15 per cent. of deposits to 24 per cent., the banks increasing their holdings of Treasury Bills and other government securities by £108 million. The commencing Special Account ratio of 24 per cent. was approximately restored by the end of the year.

ter Company Results.

Side by side with, and as a consequence of the easier mone-y situation, and with National Income up by 10 per cent. the previous year, largely as a result of the much greater ue of primary production and increases in wage rates, plus ignificant increase in personal savings, it was apparent that stralia was emerging from the temporary but threatening mp experienced in 1951-52. Trade and industry presented righter tone, and employment figures, which had receded, an to show a gradual upturn. In particular, company ance sheets were progressively reflecting the improved nomic position, and, contrary to earlier expectations, many them showed marked recovery in profits from the low point ched in the previous year.

A list of companies which have published accounts for the r ending 31st March, 1953, or later, shows that approxitely 38 per cent. of them had increased their earnings, some y materially, over 1951-52 levels, whilst 28 per cent. had ntained their figures, and only 34 per cent. had disclosed uced earnings. In the great majority of cases, still better earnings for 1952-53 will result from the adjustment of ation provisions to the lower rates provided in the Budget. the companies concerned, 28 per cent. increased their ordiy dividend rates, whilst 68 per cent. maintained the previous r's rate, and only 4 per cent. paid lower dividends.

ects of World Factors.

In assessing the future trend of economic affairs in Aus-ia, it is essential that world conditions and possibilities uld be aligned with those of a purely local character. In ad terms, it may be said that the present internal position immediate outlook are better than at any time for the previous two years, but experience has shown that, under the influence of world events, the economic situation in Australia is capable of changing almost overnight.

A sharp warning of the need for a world outlook has been given by the recent break in security prices on Wall Street. Ever since Armistice negotiations in Korea commenced, there has been anxiety as to the possible economic effects, particularly in the United States of America, which had geared its economy practically on the basis of a full-scale war. The announcement that a tentative Armistice agreement had been reached was followed by a fall in the prices of many commodities, particularly non-ferrous metals and rubber, but the decline so far has not been as great as was anticipated by the pessimists.

Some experts in America have claimed that the Korean truce has been more than discounted, and that the state of international affairs demands the continuance of huge armament expenditures. Other experts claim that it has not, and that, firstly, the American economy, and, later, that of the world at large, has yet to feel the full effects. The latter view has been given some support by the falling off in automobile sales which, in recent months, have not been keeping pace with production. This aspect cannot be ignored as the condition of the automobile industry is regarded in many circles as being the major pointer on American prosperity. Despite reassuring statements by a number of leading economists a downward trend of Wall Street prices commenced some months ago, and earlier this month was accelerated. As a result the Dow Jones Index of Industrial Share Prices fell sharply from 276.74 in August to 255.49 on 14th September, being accompanied by heavy realisations. Some recovery afterwards took place and as at 21st September the index figure was 258.10.

In view of the important influence exercised on the minds of investors in Australia by the trend of security prices on Wall Street, it is worthwhile here tracing the course of the Dow Jones Index of Industrial Share Prices during the current year. The "highs" and "lows" of this Index are set out in the following table:—:—

DOW JONES INDEX.

1953	High	Low	Highest Daily Turnover
January	293.79	225.24	2,130,000
February	290.19	281.14	2,360,000
March	290.64	279.87	2,740,000
April	280.09	270.73	3,050,000
May	278.79	271.48	1,690,000
June	274.99	262.88	2,200,000
July	272.82	268.46	1,320,000
August	276.74	261.22	2,190,000
September (to 21)	265.48	255.49	2,850,000

The American market had begun its upswing on 31st October, 1952, two trading days before the election of General Eisenhower as President. With minor fluctuations, this continued until January, 1953, when the Dow Jones Index figure of 293.79 was the highest since 297.25 on 16th April, 1930. Subsequently, even after the Armistice in Korea, the market remained relatively firm, which fact has lent emphasis to the sharp break which occurred earlier this month.

Australian Market Reaction.

With a memory of what happened in 1929, the recent sudden flurry on Wall Street helped to restrain the upward trend in share prices here, which might have been expected following the announcement of the Budget concessions. Authoritative forecasts of pending tax cuts were given during the Senate election campaign in April and early in May last, but those ultimately announced in the Budget exceeded the most sanguine expectations.

Normally, Stock Exchange prices move in anticipation of favourable events, but, on this occasion, the rises in share prices, both before and after the Budget Speech, were surprisingly moderate. Between May and the present time the Melbourne "Herald" Index of Industrial Share Prices has shown a rise of only about 4 per cent. from the 1953 "low" established in the former month, whilst the appreciation in the Sydney Stock Exchange Index of Ordinary Share Prices has been only about 8 per cent. Movements in some favoured stocks have been greater,

(Continued on next page)

AUSTRALIAN FOUNDATION INVESTMENT CO. LTD. (Contd.)—

as is shown by the following comparison of prices on 29th April, 11th September (the day after the publication of the Budget Speech in the Press), and 22nd September:—

On present indications, it would appear that there is no early prospect of a "boom" in share prices, but, provided there is no severe economic recession overseas and world prices for Australia's main exports hold at reasonable levels, a steady upward trend in values may be seen over the next few months. This view is based on consideration of local rather than overseas factors. There also seems to be a possibility of a more vigorous resumption of new share issues, which have been less numerous during the last year or so. In this connection, the market has received encouragement by the recent share issues announced by British Tobacco Co. (Australia) Limited, The Commercial Bank of Australia Limited, and the Bank of New South Wales.

Wool Position Important.

The current year promises a continuation of the long succession of almost uniformly good seasons with which Australia has been blessed since 1945. Moreover, following the gratifying increase in the production of wool, sugar, oats, barley, meats and dairy products with a higher yield per acre of wheat, though a slightly lesser crop, output of primary products should be high. This is attributable not only to favourable seasonal conditions but also to more efficient production methods resulting particularly from the increased availability of modern farm machinery, which has been facilitated by the dollar loans. A further important factor has been the wholesale destruction of rabbits through myxomatosis, which has brought back into production large areas of previously infested land.

Wool, of course, is the key point, and with the growth in the sheep population by nearly 11 per cent. since 1939 and by nearly 5 per cent. last year to over 123 million, a further overall increase in the clip is certain. According to returns issued by the National Council of Wool Selling Brokers in Australia, average prices for greasy wool in the 1953-54 selling season rose to 81.80 pence per lb. as compared with 72.42 pence per lb. in 1951-52. With a clip totalling 3.9 million bales as against 3.4 million bales in the previous year, the wool cheque rose from £307.8 million in 1951-52 to £404.8 million — the second highest in Australia's history. A further rise of 3 per cent. in the quantity available in 1953-54 is anticipated, and it is gratifying to note that early estimates suggest that merino wool may increase from 72 per cent. to 75 per cent. of the total clip.

The current wool-selling season opened on a firm note with strong demand from most consuming countries, and, although some slight hesitation developed at the recent sales, authoritative opinion appears to be that the season will produce remunerative average prices and good clearances. However, a cautious view must be preserved until November at least, and possibly later, after the finer merino wools have come on the market in quantity.

Other Primary Products.

The wheat outlook is somewhat clouded. Average yiel per acre should be very satisfactory, though the total cr may be less than in 1952-53. Further, the price position uncertain because of the large wheat surpluses which ha accumulated in the United States of America and in Cana and because of the withdrawal of the United Kingdom from t International Wheat Agreement. Much depends on wheth or not that country's quota of 179 million bushels will be fu taken up by other signatory countries. If not, then a mu larger proportion of the world trade in wheat may revert the free market. Here in Australia, also, with Labour Go ernments in power in five of the six States, strong resistan has developed to the Commonwealth's proposals for the co tinuation of the wheat stabilisation scheme. Unless a sat factory agreement can be reached in this regard, incomes wheat growers may be materially down on last year's figu Another record sugar crop is coming in, whilst other fields primary production, except, perhaps, dairying, have go prospects.

With the effect on world prices due to the cessation of h tilities in Korea, the future levels for base metals must viewed with reserve, although producers do not expect val to fall to unprofitable levels. With the removal of official co trol, London prices of copper are down to about half th ruling two years ago, whilst zinc and tin have declined su stantially.

Secondary Industries.

As pointed out by Dr. Coombs in the Commonwealth Ba Annual Report, there have been conflicting trends in second industry. Production has continued to rise in certain ba industries, such as iron and steel, and electricity generati and also in the food, drink and tobacco group. Coal prod tion in 1952-53 was maintained at slightly below the very h 1951-52 level, but there has been some accumulation of stoc Output of a wide range of goods, particularly many types textiles and clothing, was materially down, as was also case with motor bodies, electric motors and internal comb tion engines. The year saw a contraction of public buyi which, added to the accumulations of imported goods car over from the import boom period of 1951-52, induced a m cautious expansion policy on the part of many manufacture

Since the close of the financial year, trade and indus have taken on a brighter tone, and the number of recipient unemployment relief has been progressively reduced des the additions to the labour force through migration and nat increase. The substantial Budget concessions, particularly in spect of company taxation, payroll tax and sales tax, should as a powerful incentive and stimulus to trade and indus generally, and should assist a general improvement in comp profits.

The decision of the Arbitration Court to terminate a matic quarterly adjustments to the basic wage may also regarded as a favourable factor. It does not mean that w rises will cease, as trade unions may still apply to the court variations of awards, and many of them are contemplating s action, particularly in regard to margins over and above b rates. However, it does suggest that attention will not concentrated so frequently on wage rises and that it become more difficult for increases to be obtained.

Nevertheless, the major problem which confronts Austra industry, and indeed the whole community, is that of bring production costs more into line with world standards. perplexing problem is still with us, and will remain with and a partial solution will lie in (a) greater management ciency; (b) greater productive effort on the part of both ex tive and labour forces, and (c) some passing on to the pu of Budget benefits in the form of reduced prices.

The reported decision of the interstate executive of Australian Council of Trades Unions to submit to the Australia Trade Union Conference a recommendation in fa of incentive payment schemes under proper safeguards, presents an important development in Australian indus history. Up till the present, trades unions have been in their opposition to incentive payments, fearing that they result in unfair discrimination and victimisation. Their atti may be appreciated, but, under present-day conditions,

rely possible for employer and employee organisations to rive at a mutual agreement which will provide adequate safe-ards. Australia's major need is increased productivity, which the only sure road to a reduction in cost levels. A properly signed incentive payment scheme, acceptable to employer and ployee alike, would bring the achievement of that objctive ch nearer.

reased Flow of Imports.

Secondary industry is naturally concerned at the gradual axation of import restrictions imposed by the Common-alth Government in March 1952. As from 1st April last, ne some relaxation operated, the quotas over a wide range goods being increased by 10 per cent. This involved the nission of goods totalling about £50 million for the full year. further similar increase in quotas was made as from 1st y, 1953, and a third increase of 10 per cent. in quotas for general group (excluding dollar countries and Japan) will rate from 1st October. A fourth review is promised early 1954, and, as from October of this year, six-monthly licens-periods will be substituted for quarterly ones.

In view of the very healthy condition of our International ances, Australia can well afford to take additional imports, ich will help to combat inflationary trends and should nulate manufacturers to achieve lower production costs. On other hand, however, in view of Australia's high cost struc-e, the competition of lower-priced overseas goods may make fit-earning by some Australian companies more difficult. Re-nising this, the Commonwealth Government has announced t the Tariff Board is to be reorganised to expedite the hear-of the large number of claims for increased import duties ich are awaiting consideration.

With a high level of International Reserves, very satis-tory bank liquidity, the good season, and greater stability of erest rates, the foundation exists on which to build a pro-ssive resurgence of industry in Australia. Moreover, De-ce expenditure for the current year is to be maintained at 0 million, as compared with actual expenditure of £215 mil-in 1952-53, whilst capital works on behalf of governments semi-governmental authorties are expected to proceed at roximately the same rate as during the last financial year.

ure of Share Prices.

In the absence of the development of overseas conditions ch would adversely affect the sale of Australia's main export mmodities, and given the continuance of good seasons, the look for this country appears to be encouraging. Trade industry should recover much of its buoyancy under the nulus of the Budget concessions and rising national income, company profits and dividends appear likely to maintain an upward course. If this proves to be so, then a progressive recovery in equity share prices should be seen over the next few months, which might be accelerated in the first quarter of 1954 if returns from wool, wheat and other primary products maintain satisfactory levels.

Increasing attention will be directed towards the Federal general elections. The term of the present government would normally expire in April next, but, as this will coincide with the presence in Australia of Her Majesty the Queen and her Consort, the Duke of Edinburgh, it seems obvious that the elections will have to be held either much later or much earlier than April. As the Royal Visit is due to commence in February, the time available between the Christmas-New Year holidays and that month may be regarded as too short to permit of an election before that time. Thus, the election date may be pushed on to June or July next year. Those months are the most unfavourable time of the year for an election, and this has prompted speculation in some quarters as to whether or not the Government, flushed with the success of its popular Budget, may decide to go to the country much earlier — possibly in December, which is regarded as a favourable time for a Liberal-Country Party appeal to the electorate. The return of the Government to office would, if it eventuated, give a strong stimulus to optimistic investment sentiment.

Inflation Still Present.

Although the pressure of inflationary forces has been tempered to some extent, it still operates and will continue to operate, probably for a long time to come. This view is supported by the fact that the use of Central Bank credit to finance capital works is to be further extended during the current financial year. Nor have we yet seen the end of cost rises, despite the termination of the automatic quarterly adjustments to the basic wage. Moreover, the taxation cuts will serve to augment the spending power of the general public. These are added reasons why increasing attention should be paid to equity shares, the income return from which would become more attractive if the new Commonwealth loan achieved a resounding success and resulted in the commencement of a downward trend in interest rates.

In his Budget Speech, Sir Arthur Fadden appealed to the community to support the Government's efforts to attain stability, increase our industries and resources, and improve our national standards of life. All of us, I am sure, will support the view he expressed that the solution of Australia's major problems lies largely in "a combination of harder work, greater efficiency, and a higher level of savings." If these ideals become the watchwords of the people of Australia as a whole, the future of this great country will be fully assured.

The Chairman, Mr. T. Hastie, delivered the following address to shareholders at the Annual Meeting on August 28:

Deliveries of Austin vehicles in the Victorian territory were lower at 3,247. This was below the Directors' estimate partly on account of the lengthy strike at the Austin Motor Company Limited Factory, Birmingham, which adversely affected the supply of vehicles to your company. All other departments showed some improvement. After making provisions for taxation, depreciation, etc., the profit for the year ended June 30, 1953, was £165,593.

Most of the surplus funds of the company have been invested in short term securities to enable us to keep in a liquid state, and so be prepared to develop the company as the occasion demands.

Re-organisation of the Company.

During the year your Directors submitted to shareholders a scheme for the reorganisation of the company. Practically all shareholders approved the scheme, and from July 1, 1953, our trading operations were conducted by four separate companies:—

Austin Distributors Limited is engaged in the sale of all Austin vehicles.

Ausdis Used Cars Pty. Limited markets used cars.

Ausdis Spares & Service Pty. Limited handles our very substantial business in the sale of spares as well as the servicing of cars and trucks.

Ausdis Finance Pty. Limited handles the financing of vehicles sold on terms.

The parent company, Ausdis Holding Limited, does not trade but owns nearly all the shares in the above companies.

The shares in Austin Distributors Limited are no longer quoted on any Stock Exchange, and as soon as legal formalities have been completed it probably will become a proprietary company which it was before being listed some years ago. Ausdis Holding Limited shares are now quoted on The Stock Exchange of Melbourne.

The preference shares in Austin Distributors Limited were purchased by Ausdis Holding Limited for 26/- per share, and only very few are held now by the public.

With a view to securing more working space and simultaneously vacating some of our small buildings, your Directors are again investigating the possibility of building a large factory on our land in North Melbourne.

Taxation of the Motor Industry.

The motor industry, which is one of the greatest money spinners for the Federal Treasury, continues to suffer from Government controls. Road transport, which has been providing g assistance for primary producers and manufacturers alike, has b seriously affected by the heavy road taxes imposed by transp boards in several States. The tremendous amount of unnecess handling to enable goods to be transferred by rail is one of many causes of ever-increasing costs. Owners of surplus good one State are protected by the Federal Constitution against legislation to prevent the surplus being sold in other States, the terrific charges levied against road transport discourages in state road transport, even when it is impossible or impractic to forward the goods by rail or sea.

A pamphlet issued recently by the Federal Chamber of A motive Industries contained the following:—

"From 1940/41 to 1950/51 the motor vehicle user has over £112,000,000 in State taxes, and £175,000,000 in Federal ta Expenditure on roads over the same period was approxima £69,000,000 by the States, and £75,000,000 by the Federal Gov ment through disbursements to the States. The State Railw pay no sales tax, civic rates, etc. Road users on the other h have to pay all taxes. A major State imposes extremely puni fees compared with all other States, and is erecting an alr insurmountable tariff barrier against all other States.

"The capital cost of our railways throughout Australia t £374,000,000 and the wages paid to railway employees is a £76,000,000 a year. The comparative figures for motor trans are £975,000,000 (motor vehicles only) plus £300,000,000 for r plus nearly £162,000,000 invested in motor manufacturing, or a total of over £1,400,000,000."

Trading Conditions.

Following the setback to all industries throughout Austr when wool prices fell so sharply in 1951, there has been a subs tial recovery, although, in common with other traders, we are doing, nor do we expect to do, the enormous turnover of 1950 1951. We continued to enjoy a substantial share of the busi offering, and because of the high standing of Austin product fully expect to maintain our position. Unfortunately, the ma in which heavy transport has been adversely affected by taxa has had a bad effect on the demand for heavy duty trucks.

On behalf of the Board I desire to express appreciation of services to the company of the Managing Director, Mr. C. R. D son, and all those who worked with him to achieve satisfac results for the year under review.

The Automobile Fire & General Insurance Company of Australia Limited

In his address to shareholders at the Annual Meeting on July the Chairman, Sir John Newman Morris, said:—

As you will see, the net profit for the year was £25,810, after viding £13,000 for income tax. This is the best result we have achieved and as a consequence, I am sure that the shareholders join heartily with the Board in recording their appreciation of efforts of the General Manager and the staff.

Although this result enables us to pay with confidence, a final dend of 2/-, making a total of 3/- per share for the year, which esents 30% on our issued capital, I should like to emphasise that profit represents only 3.9% of our total premium income of ,573, and 15.5% of our total shareholders' funds of £165,681.

Directors.

It is with deep regret that we accepted through the year the gnation of Mr. L. B. Wallace from the Board of Directors, which oined in 1939. His outstanding ability and clarity of judgment e a great strength to us through some of the difficult years gone . Mr. Wallace felt that he had so many other calls upon his that he was unable to give the attention to directorial duties onsidered desirable.

We feel that we are fortunate in having Mr. Eric Hughes accept intment to the Board in Mr. Wallace's place. Mr. Hughes has President of the Institute of Architects for the past two years is very well known in business circles throughout Australia. feel that he will be of signal help to us in widening our relation- with the business community. He is at present in England.

General Credits Ltd.

We have put into effect a decision made unanimously by a meet- of shareholders to form a finance company. The company has registered in the name of General Credits Limited, and it commenced business on May 1 last. The company is a wholly-owned subsidiary of The Automobile Fire & General Insurance Company which has subscribed the total present paid-up capital of £50,000. This investment does not, of course, show in our balance sheet, as it was not made until May 1. You will appreciate, of course, that our new venture in finance explains why we had retained, at April 30, £112,621, in the Bank. I am happy to say that we are very pleased indeed with the progress we are making in the operation of General Credits Limited.

We have put Mr. Vernon Stanley Low in charge of G.C.L. operations. He has had a comprehensive experience in Hire Purchase Finance. For many years just prior to joining us he was one of the branch managers of Industrial Acceptance Corporation, a company which, as you are probably all aware, has been highly successful. We have every reason to believe in the success of our subsidiary and in its strengthening effects on The Automobile Fire & General Insurance Company.

General.

The rebuilding of the rear portion of our premises has now been completed. We have three new floors and a basement providing approximately 14,000 square feet, and, when all payments are made, the freehold property as a whole will have cost just over £100,000; this against a valuation of £121,000 recently obtained.

The market value of our investments exceeds book value by approximately £26,000. Thus our financial position is very satisfactory.

I have referred above to our appreciation of the efforts of Mr. Ford and his staff, and I have much pleasure in informing you that the Directors have entered into a five years' agreement with Mr. Ford as Managing Director. He has completed twenty-five years able and devoted service in our interests, and you will all, I know, join me in wishing him similar success under his new title.

The following Annual Report by the Chairman and Managing Director, Mr. R. A. Schuchard, was circulated to shareholders with the Annual Accounts:

As will be seen from the consolidated accounts the profit increased by £10,906 to £46,259. From this, the dividend on the £130,000 of preference capital has to be paid.

There is not a great deal of change in the balance sheet figures except for the additional expenditure of £48,890 on plant and machinery, plus an increased value of stocks. These have been met by increasing the amount due to the bank on overdraft.

Sales.

Sales of gas increased in volume by 3% over the preceding year. Appliances sales and installations were well maintained, as were sales of by-products. Considerable quantities of tar have been sold for use as fuel, for firing steam boilers. We anticipate that the demand for appliances, gas and by-products will continue to increase.

Following is a table of the main financial statistics over past five years:—

Statistical Record.

Plant and Distribution.

All works, plants and mains have been maintained in g order. Extensions and improvements have been made to the p and equipment at most branches. The plants at the recently quired undertakings at Warrnambool and Queenscliff have been in first class order.

We have commenced to extend a gas supply to Point L dale, 4 miles from Queenscliff. This will be a high pressure tem, designed similarly to the supply from Albury to Wod which has proved so successful.

At Goulburn, considerable extensions of mains have been pleted, to supply areas where new houses are being erected the N.S.W. Housing Commission areas, private residences, mercial and industrial concerns.

Prices.

It has been necessary to increase the prices of gas at se branches, but we have been able to absorb much of the incre costs by increased output and greater efficiencies. The Compa policy is to keep its prices of gas as low as is economically sible.

Progress of Gas Industry.

During the year there has been considerable progress in Gas Industry in Australia. In Great Britain, too, sales of gas numbers of customers have increased. In the United States du 1952, sales of gas increased by 9% and the number of custo increased by 6%.

Employees.

The amount standing at the credit of the provident fun £49,500. This includes the sum of £1,000 allocated by the Dire from this year's profits, in addition to the Company's normal tribution of 5% of wages and salaries. There are now 146 bers of the fund.

In accordance with the Company's policy, several members serving on the Councils of Associations for the advancement o gas industry, and the furtherance of the interests of the munity.

This report deals with the principal events during the It cannot deal in detail with the whole of the Company's a ties in which the employees play their part day by day. W however, recognise their part, and we express our appreciati their contribution to the welfare of the Company, and of the munities in the areas which are served.

Cliveden Mansions Limited

Cliveden Mansions Limited

The Chairman, Mr. D. Baillieu, addressed the Annual Meeting September 17 as follows:

Trading for the year has been as satisfactory as, under prelling conditions, might have been anticipated. The gross earnngs were less than those of the previous year, having been reduced a decrease of £1,227 in the revenue and an increase of £1,730 the total costs. The net profit of £4,164 compares with £5,765 1952.

The falling off in revenue was due to an easing in the demand accommodation. However, it is hoped that this demand may on be restored.

The total of increased costs includes a rise of £1,406 in wages, d £488 in the cost of fuel. Your Directors are very conscious of nstant increases in working costs. All steps are being taken effect economies wherever possible whilst maintaining the high ndard of accommodation for which Cliveden is noted.

During the year, £3,450 was expended on maintenance and reirs compared with £3,240 in the previous year.

Of the net profit of £4,164 the dividend of 10d. per share for e year absorbs £3,334 leaving £830 to be added to the balance of 559 brought in at the beginning of the year, making the carried ward balance £3,389.

Your Company's Manager, Mrs. Anderson, has been most diligent carrying out her duties. It is not an easy task, in the face mounting costs, to maintain the standards of comfort required Cliveden residents whilst, at the same time, taking all preitions to avoid stimulating those costs. To Mrs. Anderson and staff I would like to express the Board's appreciation for serces so efficiently rendered.

The company now operates a chain of 174 stores, and nine further stores are to be opened soon.

By the purchase of a controlling share interest in Coles Country Stores Ltd., G. J. Coles acquired 91 additional sites, of which 60 have been sold and the balance refitted to function as Coles Stores.

Supplies were difficult during the year following import restrictions, but Australian merchandise was more freely available in many lines.

Net tangible asset backing (book values in consolid balance-sheet)—Pref., £30/8/9 for each £1 stock unit; ord., for each 5/– stock unit.

A record turnover of approximately £25 million was reported by the Chairman, Mr. G. J. Coles, in his address to shareholders at the Annual Meeting on September 22. His address reads:

Trading Profit of the Parent Company was £1,294,644—an increase of £402,000 over the previous year. Including profit from the sale of fixed assets (£11,796) and after allowing for loss on realisation of investment in the winding up of a subsidiary company and goodwill and establishment expenses written off, the net profit before providing for taxation was £1,262,973 as compared with £959,092 last year.

Taxation

Because of the increase in trading profit, it has been necessary to provide an additional amount for taxation. It was estimated that the provision of £628,000 together with £60,000 carried forward from the previous year, would be adequate to meet the Company's liability in this regard.

The Directors' Report and Balance Sheet was completed before the announcement of the new Budget proposals for a reduction in Company Tax from 9/- to 7/- in the £. It is now realised that the amount in the Tax Reserve will be in excess of requirements for the current year's tax.

The Board and the 13,000 stockholders of the Company appreciate this fall in the rate of taxation on trading profits which has been a heavy burden in recent years. Customers will also benefit by the lower sales tax rates which have already reduced prices on many articles retailed by Coles Stores.

Sales

It has not been our usual practice to disclose annual turnover but I am pleased to announce this year that sales have reached the figure of approximately 25 million pounds, which is a new record for the Company and an improvement of 10% over the previous year. Sales increases were general throughout all States which is a pleasing indication of the prosperity of the country and the continuing growth in the popularity of Coles Stores the buying public.

Supply Position

The most difficult problem our buyers had to contend with year arose from the drastic cut made in overseas imports, of which are shipped through our London Office. The restric reduced our orders for overseas goods to less than one-fifth o amount imported during the previous trading year. This ov reduction necessitated a special effort on the part of our b to obtain additional merchandise manufactured in Australi order to give a satisfactory range for our customers' sele I am pleased to record that, apart from utility crockery and a other goods, we were able to purchase sufficient suitable lin merchandise to obtain the record sales to which I have referr

Australian manufacturers have increased their plant and put considerably during recent years and the quality of their ducts in many departments has shown a marked advance.

There is however, still a shortage of utility crockery as it not been possible to build up stocks in this department for years. While some relaxation of restrictions has been gra this essential commodity will continue to be in short supply quotas are substantially increased.

Recent changes in pricing policy by the States have add the Company's costs of distribution and also to the difficulti management. If free enterprise is to function properly it s not be hindered by unnecessary routine which only reduces ciency and wastes productive effort.

Real Estate

In view of the good results achieved, it may be an oppo time to briefly summarise the development which has taken since the war years and which has enabled your Board to est the Company in its present position in the Retail Variety field in Australia.

Immediately following the end of the war in 1945, the Company s operating 83 Stores and, during the post-war readjustment rs of 1946/1947, only two units were added to the Chain.

In 1948/1949 a policy of expansion was begun and the number of res increased to 109. From 1949, with the merger of Selfridges New South Wales and Western Australia and the purchase of controlling interest in F. & G. Stores Ltd., the number of units reased quickly and, when the change over of the F. & G. Stores Coles Stores was completed last year, the total number of stores e to 174.

In addition to the opening of new stores, a continued pro-umme of improvement in the older stores is being carried out. recent example of this policy is to be seen at Wagga Wagga, ere the original site was sold and the business moved to new d larger premises in the heart of the shopping area. This build-now incorporates the latest in design and construction to make opping easier for our customers and special provision has also en made for staff amenities and comforts. This modern store s created great interest in the City of Wagga Wagga, and we e very pleased at the favourable reaction to our Company.

Other stores which have been enlarged are situated at Box ll, Traralgon and Ararat in Victoria, and plans are in hand to -build our stores at Moe and Chelsea in Victoria, Midland Junc-n in Western Australia and Liverpool in New South Wales.

Our store in Launceston, Tasmania, which has been operating ce 1933, has become too small to handle the increased trade in at growing city and negotiations have been completed to extend e premises. Additional accommodation has been obtained and ilding operations to commence shortly will, when completed, make ailable a fine modern store with double the present selling area hich should bring a considerable increase in business to our mpany.

New Stores

New stores shortly to be added to the Chain are located at anly, Gunnedah, Cronulla and Casino in New South Wales; Bel-ave, Mentone and South Melbourne in Victoria and Whyalla in uth Australia. Another store now in course of construction is uated at Collie, a busy and progressive mining town in Western stralia. It is hoped to have several of these units in operation fore Christmas of this year.

Special mention should be made regarding the store at Manly, ew South Wales, which is located on The Corso. This building entirely new and has a frontage of 52 feet in a busy shopping ntre in that fast-growing and popular seaside city. The store ll be equipped with the most modern fixtures and lighting and ould be a valuable addition to our Chain.

We appreciate the move made by at least one State in Aus-alia by which the purchaser of a freehold, who requires possession for his own use, is enabled to obtain the premises after a limited period.

The building restrictions and regulations which have operated in most States, while necessary during the war period, have been so severe that the amount of new construction in our larger cities for the past 14 years has been negligible. Many buildings on valuable city freehold are obsolete and each year the position regarding suitable accommodation for any kind of business or profession becomes more difficult.

As industry is now in a position to undertake the construction of new works, we think the time has arrived for the States to give encouragement to those individuals and companies who are prepared to erect new city buildings to cater adequately for the needs of our increasing population.

Personnel

Mr. N. C. Coles, our Personnel Director, undertook a short visit to England and U.S.A. during the last three months of 1952, for the purpose of studying problems and obtaining information associated with his department and, during an intensive survey, visited the headquarters of several of the largest Variety Chains in U.S.A. During his stay, particularly in U.S.A., he was fortunate to be able to study the pre-Christmas trading in a number of the larger American cities.

Mr. D. S. Davis, one of the Group Buying Controllers of the Company, also visited U.S.A., United Kingdom and the Continent during the year and Mr. I. F. Tindley, a member of the buying staff of Head Office, is at present paying a buying visit to our London Office.

Your Management realises that the present and the future prosperity of your Company is greatly dependent upon its personnel, and the policy of training and promoting young men from within the Company to store management and executive positions, is rigidly maintained. Excellent opportunities are constantly being presented to young men who are willing to work and learn the essential requirements of Variety Stores. Our expansion is such that these opportunities for advancement will increase with the years, and the responsible positions which become available provide an assured future for young men joining the Company today.

Your Company employs throughout Australia some 7,000 persons and the record results which have been placed before you for the past year could not have been obtained without the full co-operation and support of each and every one of these employees.

Before concluding this address I wish, on behalf of the Directors, to pay tribute to the Management, Executives and all members of the Staff for their splendid efforts during a strenuous year of trading.

MAKE YOUR OWN DREAM HOLIDAY A CERTAINTY . . . NEXT YEAR

If you have had to postpone, again, the kind of holiday you've always wanted because of money, here is a suggestion: Start regular saving in a State Savings Bank Account and make sure your dream holiday comes true . . . next year.

Whether you want to save for a holiday or for a deposit on a home, or for a new car, television set or education, a State Savings Bank account is the easiest, surest way to accumulate the money you need.

Pay in Regularly to

4th Year ended December 31, 1952. Meeting June 15, 1953.

Although sales were only 4% less than in the previous year, steeply rising costs of production and selling, combined with falling stock values, caused a trading loss of £21,814, the first in the history of the company. No interim dividend was paid, and the final was reduced to 3%, absorbing £13,980 (total distribution last year was 8%).

Reserves were £6,375 lower after writing back £11,309 taxation overprovided and inclusion of £19,481 profit on sale of assets.

Net tangible asset backing (book values in consolida balance-sheet)—£1/5/8.

In his review which was circulated to shareholders with the Annual Accounts, the Chairman, Mr. G. N. Raymond, reported as follows:

The company had a consolidated net loss from operations of £17,985 for 1952, compared with a net profit, before tax, of £142,614 in 1951. (After providing for income tax payable in respect of 1952 profits of one subsidiary, the consolidated net loss was £21,814.) This adverse swing may be attributed to the following factors:

1. Although sales revenue was maintained at a level close to our all-time record established in 1951 (and this without benefit of any increase in selling prices during the year), steeply rising production costs common to almost all Australian manufacturers resulted in substantial decreases in the gross earnings of all departments.
2. Selling and administrative expenses were considerably higher in 1952, despite efforts made to effect all economies practicable. Selling expenses fairly reflected the higher cost of doing business in an increasingly competitive market in which buyers were holding their ordering to an absolute minimum.
3. The need to make a write down of approximately £27,000 in stocks of raw materials, supplies and finished products on hand at the year's end, reflecting price declines experienced in certain lines, so as to carry all merchandise stocks at the lower of cost, market or replacement values. You may recall that in our accounts for 1951 your Directors recommended the appropriation of £20,000 from profit and loss account to set up a reserve to meet possible future inventory price declines. We now believe that the stock write-down we have taken in 1952 will place us in a position to clear our stocks without further loss and, accordingly, the £20,000 stock reserve has been restored to the profit and loss carry forward in these accounts.
4. In periods of temporary business set-back it is not desirable for us to make rapid reductions in operating costs commensurate with the fall in output because of the necessity of maintaining our outlay on research, design and technical development so necessary if we are to render maximum service to the industries which buy our products. This has always been the fundamental principle on which our operations have been based, and although adherence to it has undoubtedly cost us money in 1952, I am sure that over the years it has done much to build the reputation our products enjoy.

I might add that this is the first year in the long history of this company and its predecessor, G. N. Raymond Pty. Ltd., that a loss has been incurred.

Sales.

Consolidated sales revenue for 1952 was £1,217,000, a decre of only 4.1% from the record level achieved in 1951. In view the difficult trading conditions experienced by the footwear ind try, which absorbs the major portion of our output, we consi that the volume of business transacted reflects favourably on efforts of our sales force. It is interesting to note that the t production of boots and shoes in Australia, as reported by Commonwealth Bureau of Census and Statistics, declined fr 16,892,800 pairs in 1951 to 15,843,000 pairs in 1952, a fall of 6.

Financial Position.

I am pleased to be able to report that, despite the trading back suffered during the year, we have been able to make sa factory progress in strengthening the financial position of company. During the first half of the year, maturing commitm for the purchase of raw materials, coupled with a sharp dec in production which commenced during the June quarter, left with expanded inventories of raw materials and work in progr the financing of which placed a heavy strain on our liquid sources. I am happy to say that our bankers accorded us gene support and made available the funds we required to assist over a difficult period. Our bank overdraft, which was in ex of £340,000 at June 30, 1952, had been reduced to about £290,00 December 31, and has since been further reduced to below £200, Similarly, our merchandise stocks, which stood at £488,000 June 30, were reduced by £109,000 to £379,000 at the year's With rigid control of purchasing and higher sales volume achi during the first four months of the current year we expect reducing trend in merchandise stocks to be continued for the mainder of 1953.

Future Prospects.

Since the close of the year, business conditions in the wear trade have improved considerably. Retailers, wholesalers manufacturers who, throughout most of 1952 were pursuin policy of stock reduction, have resumed ordering on a larger s Our sales revenue for the first four months of 1953 exceeded for the corresponding period in 1952 and resulted in a satisfac net profit. We now have a good volume of orders on hand expect to operate at, or close to, maximum capacity for the mainder of the year. In the highly competitive markets in w we are doing business our capacity to earn reasonable profits pends on expanding turnover and cutting costs by the con improvement of our operating efficiency. We are confident that efforts in this direction will prove successful in 1953.

Because we now have sufficient capacity in our Australian ctories to service the footwear industry in New Zealand, your irectors have recently decided to discontinue manufacturing erations in that territory. Satisfactory arrangements have been ncluded with an old-established New Zealand manufacturer for ntinuing on-the-spot processing required to maintain service to ur customers. These arrangements assure the continuing supply our company of a major portion of the requirements for com-onents and certain raw materials used by the New Zealand foot-ear industry.

Liquidation of the New Zealand company is now proceeding, nd is expected to return an amount in excess of £50,000 during is year.

Our New South Wales subsidiary continues to make progress, nd I am confident that its steady growth will enable it to make worthwhile contribution to group earnings this year.

Dividend.

Your Directors considered it necessary to pass the declaration of the usual interim dividend for 1952 because of the unfavourable trend of operating results and the then uncertain future outlook. However, as the company is now trading profitably again, and the 1952 operating loss was more than offset by other credits to profit and loss account, your Directors believe that the general position justifies the payment of a 3% final dividend. The Board's recommendation may be taken as a firm expression of confidence in the future prospects of our company and the industries with which we are associated.

Staff.

On behalf of the Board of Directors and, I am sure, of shareholders also, I would like to express sincere thanks to all officers and employees whose loyal and capable service contributes so vitally, in our mutual interests, to the development and progress of our company.

Net tangible asset backing (book values in consolidated balance-sheet)—£1/16/-.

Record turnover and profit were reported by the Chairman, Mr. F. P. Johns, to shareholders at the Annual Meeting held on August 8. His address reads:—

The net profit for the year, after allowing £117,200 for taxation, s £139,544, and after taking into account the amount brought for-ard from last year and allowing for interim dividend paid in Feb-uary, there is £123,029 available for distribution.

The Directors recommend to you the payment of a dividend of % for the half-year just ended, making a total for the year of 13%. t is also recommended that £50,000 be added to reserve. This will eave an amount of £25,973 to be carried forward to next year.

These figures compare with £12,895 brought forward from last ear when the reserve was increased by £45,000. The final dividend ast year, you will recall, was 7%.

Twelve months ago, I referred to the arrangements made for he sale of one of our properties in South Melbourne; this transac-ion is now finalised and the item shown in our balance sheet—as rofit on sale of land and buildings of £100,000, represents the differ-nce between the sale price and the value at which this property tood in our books. It is recommended that this amount should lso be transferred to Reserve.

These considerable amounts added to the reserve will greatly ssist in financing the present extensions at our Sandringham works, o which I will refer later.

Turnover.

Our turnover for the year was greater than that of any previous ear in the company's history, and our profit is also higher than as been earned in any other year. It is considered that the esults fully justify the payment of an increased dividend.

Adequate provision has been made for depreciation and a num-er of new items of plant have been acquired. The existing plant as been well maintained.

Our subsidiary companies have all operated on a profitable basis nd have contributed dividends to the extent of £9,308.

Sandringham Works.

The steady development of our Sandringham works has continued. Last year I told you that extensions were under way at this site, and I am glad that I can report that this work is now completed and a large proportion of our structural work is being produced at these works.

Further large extensions are now well advanced, and within 6 months we expect that most of our structural department will be operating at Sandringham.

The additional space that will shortly be available at South Melbourne will enable us to improve the efficiency and to increase the output of our crane and lift departments, as the opportunity occurs, and to reduce the overcrowding that is now restricting these departments.

The extension of our activities and the increased volume of business in recent years, has caused much overcrowding of our offices, and we have just commenced work on the extension of the office building here in South Melbourne.

Hobart Works.

Within the last 6 months we have opened a structural works in Hobart, and from our operations so far, we have every confidence that this will be a successful venture. We have been fortunate in being able to lease from the Tasmanian Government, suitable premises which include both workshop and office buildings, with adequate area for future extensions should they become necessary. Our agreement with the Government gives us the option to purchase the premises within the next 10 years and fixes the price to be paid.

Prospects.

Turning now to the year we have just commenced, I am able to say that we have a substantial volume of orders in hand, and provided we are able to obtain supplies of material, in particular steel, in sufficient quantities, we feel confident that the results of this period will be satisfactory.

Kelly & Lewis Ltd.

Engineers.

Reg. Office: Springvale, Vic. **'Phone:** UM 9321. **Directors:** K. P. Lewis (Chairman), E. L. Lewis (Vice-Chairman), A. L. Bruns (Manag. Director), L. J. Hartnett, R. Macfarlane. **Auditors:** Wilson, Danby & Giddy.

Year ended June 30, 1953. Meeting August 20, 1953.

Although sales were less than last year's record, profit was £28,000 higher at £97,724, due to reduced overheads and taxation. Dividend was again 8%. Reserves were £24,058 lower, following transfers of £21,250 to reduce value of shares in K.L. Tractors to market value, and £51,979 to reduce overhead in work in progress.

The Chairman, Mr. K. Lewis, addressed the Annual Meeting of shareholders on August 20 as follows—

It is gratifying to note that although the sales are this year slightly under £3,000,000 we are able to report a record profit of £137,213 and this profit is after making provisions for depreciation and provident fund. Shareholders will remember in last year's report it was suggested that with care and skill in management it was anticipated, although turnover would be somewhat reduced, it was possible profits could be maintained at a satisfactory level. It is pleasing to know our forecast has been more than justified in that though turnover fell slightly the profits were greater and inspires confidence for the coming year.

Production costs

A noticeable reduction in demand for standard products, together with natural buyer resistance to present prices, has been evident this past year. Many of our raw materials have increased in price and the basic wage has also moderately risen over this period and we are faced with a substantial outlay and future increase in outgoings in the coming years should the proposed long service leave become law.

We are doing all we can to reduce internal costs and charges but external charges for materials and services used in our production considerably exceed the internal charges under our control and as a consequence substantial reduction in costs and the following reduction in prices can only be achieved by a concerted effort on the same lines throughout the whole nation.

Contracts in hand

As was mentioned at the previous Annual Meeting, we were successful in securing one of the largest contracts placed by the Commonwealth Government under the Colombo Plan for 236 complete pumping plants for irrigation purposes in Pakistan. This contract is now well in hand and deliveries of some of the equipment have already taken place. It will, no doubt, be of interest to shareholders to know that we have in production at present orders for pumping equipment totalling in all over £1,000,000 in value. During the year we commenced erection of two large condensing plants in the new power station at Bulimba for the Ci Electric Light Company, Brisbane. This order is the largest co densing plant order we have received and is due for completion the coming year. Similar plant supplied to Newport "A" pow station has now completed its maintenance period and been a cepted by the Railways Department who have complimented on the quality, performance and delivery of this equipment.

You will notice on the back cover of this year's report a phot graph of the first of seven of the largest pumps we have ma for the circulating water system of the Yallourn power stati these pumps on test gave an efficiency of over 90% and are line with top world standard in design and efficiency. These sults are a great credit to our designers and engineers and ha proved the value of the research laboratory we equipped so years ago.

Distribution

Our Sales Division, K. L. Distributors Pty. Ltd., is activ selling our own products and those of our overseas principa throughout Australia and we are further able to report that have representatives in India, Pakistan, Malaya, Indonesia a other countries in the East. As well as owning properties Brisbane and Perth we have now secured our own property South Melbourne to house our Victorian sales activities.

Subsidiaries

During the year we decided to curtail the carrying busine Russell Carriers Pty. Ltd., which we have owned for a num of years, and have disposed of the property in Port Melbourne some of the plant and equipment.

Shareholders are aware it has been our policy to spread interests over a wider field than that of general mechanical gineering; one of our successful interests under this policy K. L. Farm Equipment Co. Pty. Ltd., now occupying a new fact at Dandenong. This company produces a range of pasture impro ment machinery which is held in high regard throughout Commonwealth, is most progressive and is continuously develop and improving the machines, and we are glad to report has another successful year.

Accounts

In commenting on this aspect of the report we should perhaps efer to last year when shareholders were advised that it was ur aim this year to find from reductions in stock, finance necesary to carry out our policy of re-equipping and modernising fixed ssets and to assist in liquidity generally.

The Directors are naturally pleased that our efforts for the ear in this regard have met with success. The result to date : stocks have been reduced quite considerably and have provided nds to improve the company's liquid position and to take care f commitments on new plant which has been arriving from verseas.

New Plant

The company will shortly be erecting new buildings and intalling the latest high production machinery for the manufacture f our standard centrifugal pumps and with this programme in and we feel that the trend of the balance sheet for the next ear or two will show reduction in stocks and accounts receivable, ith a corresponding increase of our fixed assets.

Events in the past have shown that our rates of depreciation ave always been adequate but the problem facing all businesses, oth large and small, is the difficulty of finding the new capital rom present sources to meet the greatly increased costs of relacing even the same article at today's high prices.

Our debtors continue largely on the same level as last year nd are reasonable having regard to our turnover. Throughout ustralia they are, in the main, very well controlled and in a ound condition. Sundry debtors under the heading "Bulldog ractors Pty. Ltd." appearing in last year's balance sheet have een converted into shares in that company and now appear under ur investments "Shares in other companies."

Creditors have been reduced and are current. The figure hown includes considerable amounts not yet due for payment but hich are in respect of shipments in course of transit from overeas.

Taxation

The company's tax commitments are up to date and, as stated n the formal Directors' Report, provision has been made for taxaion at current rates. Any variation from today's rate which nay take place in the forthcoming budget will of necessity be or adjustment in this coming year. In this regard it is sincerely oped the Government will in the forthcoming budget make reductions in the onerous rates of taxation which have for so many ears been a heavy burden on industry.

A further contribution of £5,000 to the retirement and provident fund for the benefit of the company's employees has been made and this fund now stands at a total of approximately £32,000 which has all been contributed since 1944. To date the fund has largely existed on its income and it continues to satisfactorily provide for some 550 members who are eligible for membership. It is probable that the necessarily large sums to be found in the next few years for long service leave will make it impossible for us to continue making grants to the provident fund until we have recovered from the immediate effects of this legislation.

I would refer to two matters mentioned in the Directors' Report; the first is that your Board has re-valued our ordinary shareholding in K. L. Tractors Limited to present market value and secondly, have re-valued Work in Progress at replacement cost, both these re-valuations have been a charge against reserves.

Asset Backing

It is felt it is not out of place to once again draw attention to the asset backing of our ordinary shares, which is 50% greater than the present market value, a position which probably cannot be equalled by many public companies in Australia. This is a reflection of the strength of the company and must be a source of satisfaction to the holders of our shares, particularly when it is remembered that since the inception of the public company we have, with three exceptions, paid an 8% yearly dividend, and in addition to sharing in new issues, ordinary shareholders have received a bonus of one in ten of tax paid shares.

Before concluding I should again thank all the members of our organization for their help in obtaining such a satisfactory result for our shareholders.

Appropriations

The Directors after carefully considering the results for the year and the company's future programme recommended to shareholders payment of a final dividend of 4% on ordinary shares (making 8% for the year), 4% on 6/8% cumulative preference shares (making 8% for the year) and 2½% on 5% cumulative preference shares (making 5% for the year) for the year ended June 30, 1953, out of the total profits for the year ended June 30, 1953, payable on August 31, 1953. This constitutes the 29th consecutive half-yearly dividend since our inception as a public company in 1939. It is further recommended that the amount of £52,500 be transferred to general reserve.

In his remarks to shareholders at the Annual Meeting held o September 14, the Chairman, Mr. W. O. Burt, said:—

Your Directors again have to report a very satisfactory year.

Production.

There was an increase on last year which was also a record yea Profit is down a little owing to our not being able to pass on i increased costs. Prospects for the current year are promising that already we have in hand sufficient orders to maintain full pr duction until June next.

Plant.

The plant is in excellent condition and further units are on ord and should be in operation early in 1954.

Profits before Taxation.

A review of net profits before taxation for the past six years a paid-up share capital of £44,000 is interesting:—

1947/1948— £7,163
1948/1949— £6,974
1949/1950— £5,164
1950/1951— £7,802
1951/1952—£10,147
1952/1953— £8,649

and those results point to capable and efficient management ov a long period.

The promises of increased production and lower taxation for t current year encourage a bright outlook.

Dividend Policy.

You will note that even though net profits were slightly less th for last year your Directors nevertheless decided to pay and decl the increased dividend of 10%. There is a school of opinion wh counsels the building up of reserves while keeping dividends down After an examination of the capital backing of share capi your Directors came to the conclusion that the sound position of t Company and a promising current year justifies the payment of 10

Capital Backing.

Many years ago the £1 ordinary shares of this Company w written down to 9/3. Today the improved condition of the Compa discloses that the original capital position of shareholders has be almost completely retrieved and for each 5/- share there are n fixed and current assets of at approximately 10/- per 5/- share.

Balance Sheet.

The accounts disclose a very compact undertaking and a cl balance sheet. Land and buildings (revalued at June 30, 1950) £30,655, are, in the opinion of experts, most conservatively valued The banking and credit position of the Company is in excell shape.

Future Policy.

Consideration is being given to proposals which may enable Company to extend its activities.

General Manager and Staff.

Your Managing Director, Mr. Reed, has done an excellent and staff relationships are excellent. To Mr. Reed and a loyal efficient staff the Directors accord their sincere thanks.

PLAN FOR PROBATE

IT PAYS TO PLAN FOR IT NOW!

State and Federal Duties can be heavy charges on your estate, reducing the assets you have built up for the security of your family and dependants.

Here are a few examples of the death duties payable on estates passing to a widow and children:—

Net Estate of £10,000	Duties £796
Net Estate of £25,000	Duties £3,448
Net Estate of £50,000	Duties £11,190
Net Estate of £100,000	Duties £36,062

CAN YOUR ESTATE CARRY THE BURDEN OF DEATH DUTIES?

Why not plan your family's future security in consultation with National Trustees Company? The intelligent planning of your estate's affairs will ensure a definite financial gain.

You are invited to call and discuss the problems of your own estate with one of our experienced officers without obligation of any kind.

The Great Melbourne Fire left only one building intact in a whole city block

GRINNELL SPRINKLERS SAVED IT!

In 1897 the city of Melbourne suffered the fire that is still known as "The Great Melbourne Fire."

From Flinders Street to Flinders Lane, from Elizabeth to Swanston Street, warehouses were reduced to smoking shells. Yet right in the middle of the area the Mutual Store stood intact.

As the Melbourne Argus of November 22, 1897, writes —"None of the buildings was more fiercely attacked than the Mutual Store and, while the others were gutted with phenomenal speed, the store stoutly and successfully resisted."

The Argus continues, "The test which the *Grinnell* Sprinklers (which protect the building in all areas) received, served to show that they could be relied upon to come into play where the heat was allowed to rise to the necessary temperature. Wherever the fire encroached to any extent the sprinklers operated."

Today, over 50 years later, the block around the Mutual Store has been rebuilt and almost without exception the buildings are fitted with Grinnell Automatic Sprinkler systems. — *From Wormald Brothers Case History File.*

In addressing shareholders at the Annual Meeting on August 26, the Chairman, Mr. D. York Syme, made the following remarks:

Shareholders will be satisfied, I feel sure, with the result disclosed by the Balance Sheet which has enabled us to maintain the dividend at 8% p.a. on the Ordinary Shares and 6% p.a. on the Preference Shares. After payment of these dividends and after transferring £5,000 to General Reserve, an amount of £67,251 is carried forward to next year's accounts.

You will observe we have thought it prudent to make further provision for future overhauls by setting aside £37,000. In view of the steadily increasing cost of repairs and maintenance, it is important we strengthen provisions accordingly.

With regard to the transfer of £5,000 to the Staff Superannuation Fund. I should explain the scale of pensions payable to officers on their retirement, which was adopted when the present Superannuation Fund was created in 1937, has suffered from the steady fall in the value of the Australian £1. It is hoped that this and possibly future allocations will enable a commensurate increase to be made in the amount of pensions.

Turn-round of Vessels.

Trading results from the steamers have suffered from the intermitent shortage of wharf labour at some ports which has militated against good despatch. It is gratifying to see that action in the last few days by the Commonwealth Minister for Labour has resulted in the Waterside Workers' Federation agreeing to increase the labour force at several ports in accordance with the requirements of the Australian Stevedoring Board. As soon as the additional men make a start, the turn round of ships in port should quickly improve.

Replacement Costs.

The cost of replacing obsolescent vessels has shown little change since our last meeting. You will realise what a major problem this is when I tell you that to build a cargo ship of 6,000 tons deadweight capacity, conforming to Lloyds Classification and also the requirements of the Australian Navigation Act, entails an expenditure of about £700,000, Australian, being several times greater than the original cost of the cargo units of the fleet.

Sums set aside for normal depreciation of the existing vess therefore, fall far short of the amount required for replacem at today's prices. For this purpose we have been building up serves as opportunity occurs but this course is greatly hamp by the severe Federal taxation which, as most of you know, i present levied upon Company profits to the extent of approxima 9/- in the £1. Both in Australia and in the United Kingdom s owners are persistently urging upon the Governments that maintenance of adequate and modern fleets, which are esse both from the trading aspect as well as for our national saf demands special consideration. The Australasian Steamship O ers' Federation has pressed the Commonwealth Government recognise the special position of shipping, and we hope that forthcoming Federal Budget may help us, even if only to a m fied degree.

Pillages and Shortages.

With regard to the continuing evil of shortages and pill of cargo, I observe with satisfaction that validity of the Reg tions of the Melbourne Harbor Trust Commissioners governing correct delivery of cargo was recently upheld on appeal by Supreme Court of Victoria. Satisfaction with this outcome been manifested in shipping circles in Australia and the U Kingdom.

Engineering Activities.

Our Hobson's Bay Dock and Engineering Company at Willi town again made a substantial contribution to earnings and results of the Hodge Engineering Company at Sydney were s factory.

Over the last few years criticism has been levelled ag the adequacy of the tug fleet at Melbourne. With the advent new and powerful tug in the last few months and upon compl of a similar unit now being built at Sydney, the stage wi reached when this port will be able to meet all demands.

Staff.

The Directors acknowledge with warm appreciation the tinuance of the good work done by our Officers and Staff ashore and afloat.

In his address to shareholders at the Annual Meeting on gust 27, the Chairman, Mr. J. M. Rodd, said:

Your company, which was incorporated on December 24, 1952, a holding company, and its main assets comprise all the issued res in Westminster Carpets Pty. Ltd. and The Whitehead mical Company (Australia) Pty. Ltd., these shares having been uired earlier this year in exchange for the issue of 1,060,000 inary shares of 10/- in Minster Limited. The shares were is-d credited as fully paid up, and were subsequently converted o stock.

Westminster Carpets Pty. Ltd. which was incorporated on vember 29, 1946, commenced production of carpet in July, 1949. The Whitehead Chemical Company (Australia) Pty. Ltd., which s incorporated on December 14, 1948, commenced production of ber dispersion in March, 1950.

Production.

From the time of first production there has been a strong and wing demand for Westminster Carpet. Since July 1, 1952, it been possible to maintain continuous production, and the pet-making plant has for some time now been working for 142 rs each week.

Profit and Dividend.

The consolidated accounts disclose that the aggregate net pro-for the year after writing off all trading expenses, including reciation (£22,352), but before making provision for taxation, ounted to £208,738. The amount provided for taxation is £96,194, ving a balance of £112,544.

An amount of £11,104 has been transferred to reserves, which June 30, 1953, totalled £76,653.

The company paid an initial dividend of £46,375, and the balance ried forward in the appropriation accounts amounts to £23,290.

The Outlook.

Since June 30 last, production of carpet has been maintained a rate which compares favourably with the production rate for year ended on that date. Demand for carpet continues to be l in excess of the company's ability to produce, and there is ry reason to believe that this situation will continue. While no diate extension of plant is contemplated yet, your Directors keep the question of expansion under review.

Your Directors are very appreciative of the loyal and co-erative manner in which all members of the staff have carried their duties.

Are you leaving

Your Executor

a "legacy" of trouble?

One Executor, however able, cannot possibly acquire the specialised knowledge of a group of experts.
Many people appoint the Union Trustee Company as *sole* Executor of their Wills. You, too, can do so with complete confidence. But should you wish to combine the Company's extensive knowledge with the services of a relative or friend, you can appoint the Union Trustee as co-Executor with that person.
Why not take advantage of Union Trustee's experience in administration of all types of Estates? Service is comprehensive; charges are moderate.

The following address by the Chairman, Sir John Storey, was circulated to shareholders with the Annual Accounts:—

The Directors' Report has dealt with the accounts and operations of the holding company, Repco Limited. My comments refer to the operations and the consolidated accounts of the Repco group of wholly-owned companies, as well as to the development of those enterprises in which we are associated as equal partners with overseas companies.

Before commenting on the accounts I wish to refer to the great loss sustained by the Board and the Company in the death of our colleague, Sir George Dalziel Kelly. Sir Dalziel joined the directorate in 1945 and his experience was of inestimable value during his term as a Director which synchronized with the period of the Company's maximum expansion. He combined outstanding ability in business affairs with a charm of manner which endeared him to us all. I desire to permanently record our deep appreciation of his services to the Company.

Administration.

During the year a number of important changes were made in our administration. Mr. C. G. McGrath was appointed Managing Director, Mr. D. E. Callinan, Director of Manufacturing, and Mr. W. H. B. Daddo was elected to the Board and appointed Director of Finance. In accordance with the Company's Articles, Mr. Daddo vacates this position at this meeting, but is eligible for election and offers himself accordingly.

These changes followed naturally on the Company's growth in that it seemed wise at this stage to nominate the future Managing Director of the Company and his key staff. Accordingly, in April last, I recommended to the Board that Mr. McGrath be appointed Managing Director and that I perform the dual function of Chairman of the Board and of Chief Executive, and the recommendation was accepted.

The creation of the position of Chief Executive, additional to that of Managing Director, is not common in Australia, but is a frequent practice overseas, in order to permit a newly appointed Managing Director to assume full operating responsibility more gradually than would otherwise be possible. The Company is fortunate in having an executive of Mr. McGrath's ability and experience to assume the responsibilities of Managing Director of our fast-growing organisation. He joined the Company some 26 years ago and has filled a series of important executive positions in the course of his rise to the Managing Directorship.

Subsidiary Company Commentary.

Repco Universal Joints Pty. Ltd.—This subsidiary which, as previously advised, is engaged in the manufacture of Mechanics Universal Joints and drive shaft assemblies, is steadily moving towards full production.

Despite the normal share of initial production and organis problems it is making satisfactory progress and is receiving wh hearted co-operation from the vehicle manufacturers. We are vinced that it is the type of production unit ideally suited for present stage of Australia's industrial development. Architectu attractive, specialised in its production, equipped for the hi standards of quality production and yet flexible enough to pr for the relatively small sales volume available in Australia, it i type of factory which is of national importance in its defence p tial, and of considerable importance to the continued develop of motor vehicle and tractor manufacture in Australia.

Paton's Brake Replacements Pty. Ltd.—The new factory erected for this subsidiary is complete and in partial produc The administrative building on the same site will be completed in November by which time the transfer from the group of factories located in the city will have been completed. The fa and administration building are modern in every respect, with class amenities for employees, the best equipment procurable fo manufacture of P.B.R. products and with effective plans for ex sion. The Paton's range of products is of great importance t motor vehicle industry of Australia, and we are happy that important unit in our operations is now in its permanent home.

Mr. G. Paton has resigned from the Managing Directorsh accordance with arrangements made when we purchased Pa Brakes but he will continue as a Director of Repco Ltd. for a and act as consultant and adviser in the production and mark of brake parts.

P. J. Bearings Pty. Ltd., Newcastle, and Repco Bearing Com Pty. Ltd.—Both companies are moving along satisfactorily and are benefiting by the constant exchange of technical data. N. C. Goodman resigned his position as Managing Director of Bearings Pty. Ltd., on account of his health and Mr. D. G. S has been appointed Manager in his place.

Precision Metal Stampings Pty. Ltd.—It is proposed to er new factory at Moorabbin adjoining the new factory erected Paton's Brakes and transfer the entire operation from Sydn Moorabbin. At the present time Mr. Callinan and the Fa Manager, Mr. D. A. Johnston, are in England, studying the developments in the production of oil seals preparatory to fina the plans for the transfer.

Repco Export Company.—Whilst there has been a decline i volume this year when compared with last year, we are still e ing excellent business in our principal markets, namely New Ze South Africa, Rhodesia, Malaya and India, where our product well and favourably known. Our chief problem, of course, has that of successfully competing with American, British and Eur manufacturers with our costs of production steadily rising.

No special comment is necessary regarding the other subsi companies because there has been little or no change in their o tions during the past year.

Associated Companies.

Payen, Byrne & Blackford Pty. Ltd., Brisbane.—In my address ast year I referred to proposals for the formation of new companies n association with Engineering Components Ltd., of Slough, England. ince then, however, fresh proposals have been made which would reatly increase the scope of these operations. These proposals have een the subject of negotiations in England and agreement in prinple has been reached. I hope to be in a position to announce the etails in the near future.

Taking into consideration the conditions prevailing during the rst half of this financial year this company has achieved a good esult for the year and currently is operating very satisfactorily.

Kirkstall-Repco Pty. Ltd.—This company has now been in operaon for some months and is progressively building up production. he need to provide balance in the operations of both the stamp shop nd the machine shop has necessitated increased investment in xtension of the stamp shop building and in plant and machinery. The total investment in this enterprise is now £800,000, each of ne partner companies providing £400,000. Production is steadily ncreasing and during the next twelve months should reach the rofit-making stage. In a highly technical field such as this, proress cannot be hurried.

General Operations.

Sales and profit were markedly lower than they were in 1951-52, ecause of a considerable reduction in sales in our manufacturing ivisions in the first nine months of the year On the other hand, onsumer demand, as reflected in our merchandise, engineering and ervice sales, show no reduction despite the slowing down of general usiness activity in Australia.

Factory sales were down because wholesalers, vehicle importers nd manufacturers, car, truck and tractor distributors and garages reatly curtailed their purchases in order to adjust their inventories, hich had grown to excessive proportions. This adjustment occupied t least nine months of the year during which period we were indated with small orders, costly to handle and to produce.

The adjustment was necessary and healthy and we are now in ne position that most of our distributors have well-balanced stocks nd are buying in satisfactory volume to meet the consumer demand.

It was an interesting and testing period and one which proved gain, if proof were necessary, the inherent strength of our organisaon. Because of our knowledge of the steady consumer demand e did not feel over-concerned about the fall in factory sales, nor d we dismiss key personnel, but carried the high personnel costs the knowledge that adequate staffs would be badly needed within year or so. Also, although it is always difficult to adequately repare for a recession in business, we anticipated a drop in sales olume without knowing when it would occur. Accordingly, we uilt up a considerable credit in the Profit and Loss Account to meet ne position when it arose. Happily, we were obliged to use very ttle of it.

Consolidated Accounts.

Profit and Loss.—The consolidated profit of Repco Ltd. and its ubsidiary companies was £241,123, a decrease of £61,116 by comparison ith the previous year. This profit was earned after charging 0,063 for depreciation and after providing £160,739 for taxation.

Depreciation.—Depreciation at normal rates has been written off lant, Fixtures, Furniture, Office Machines and Motor Vehicles. The tal charge, £70,063, is £14,640 greater than the charge against the revious year.

Taxation.—Taxation has been provided at the rates applicable to ne 1951-52 year. The provision of £160,739 was arrived at after inging to account £13,905 over-provided from the 1951-52 year. alance of provision for taxation as shown on the balance sheet cludes taxation for 1951-52 in the accounts of P. J. Bearings Pty. td. at date of acquisition and against which taxation has not yet en assessed.

Freehold Properties £939,013.—The increase in this item is ocsioned by the inclusion of factory property of P. J. Bearings y. Ltd., the completion of extension to the bearing factory at auncestón and cost to date of new factory premises for Paton's ake Replacements Pty. Ltd. at Moorabbin.

Plant, Machinery, Furniture, Office Machines, Motor Vehicles, c.. £979,925.—These items, after depreciation, have increased by 94,046. The increase includes cost of assets under these headings cluded in the purchase of P. J. Bearings Pty. Ltd., the acquisition new plant for Paton's Brake Replacements Pty. Ltd., developental expenditure on clutch and universal joint production and rmal progressive replacement of obsolete plant throughout the ganisation.

Debtors, £764,632.—Total balances have been reduced by £107,659 ter taking into account inclusion of debtors' balances of P. J. arings Pty. Ltd. This substantial reduction has been achieved in ite of increased sales volume during the closing three months of e year as compared with last financial year.

Accounts are in excellent order and no difficulties have been exrienced in collection.

Inventories, £1,793,103.—The increase in inventories of £99,909 is marily due to the inclusion of closing stocks of P. J. Bearings y. Ltd. Stocks in all categories are in good order.

Shares in Associated Companies and Advance to Kirkstall-Repco y. Ltd., £574,047.—This item represents cost of our half interest Kirkstall-Repco Pty. Ltd. and Payen, Byrne & Blackford Pty. td., together with temporary advance, £145,000, made to the former mpany. Of this amount £65,000 has been repaid since balance date. e balance, £80,000, stands as share subscription paid in advance. erest at bank rate is received on these advances.

Goodwill, £452,416.—The increase in this item of £147,649 repreits the difference between book value and the price paid, after dependent valuation of assets, for the issued shares of P. J. Bears Pty. Ltd.

Sundry Creditors and Bank Overdraft, £699,272.—These items have en reduced by £383,123. Proceeds of the issue of Unsecured Regised Notes, fully paid Shares issued at various premiums to vendor areholders of Payen, Byrne & Blackford Pty. Ltd., and P. J. Bears Pty. Ltd. interests and, of course, use of current profits has financed this reduction, and the increase in assets to which I have referred previously.

Shareholders' Funds.—Increase in issued share capital is due to the issue of fully paid shares as mentioned previously at various premiums and to the issue of shares to staff at a premium under the special terms and conditions governing staff shares.

These premiums account for the increase in Reserves of £225,129.

Profit and Loss Account balance has been reduced by £21,080. We have, in the past, built up a credit balance in the Profit and Loss Account with the primary aim of having funds available for the preservation of existing dividend rates should any temporary trading setback occur. This condition existed for a time during last year and the Company's profits were affected. Directors have, however, taken into account the temporary nature of this condition and in the light of current trading results and because of the satisfactory outlook for the ensuing year your Directors had no hesitation in recommending an unchanged final dividend of 7½ per cent., making 15 per cent. for the year.

Deferred Liability.—1,066,500 6% Unsecured Registered Notes of £1 each.

The reasons for, and the particular terms applicable to, the issue of notes were fully set out in the Prospectus issued in October, 1952. The success of the issue confirmed the opinion of your Directors that this method of raising capital would be acceptable to our shareholders and the investing public.

Operating Statistics.

The following are statistics similar to those included in previous addresses:—

Cost of wages and salaries paid to 2,111 employees	£1,422,074
Cost of taxation (estimated), including pay roll tax	£211,561
Cost of dividends paid to 3,749 shareholders	£262,203
Cost of superannuation contribution for 750 employees	£51,721
Cost of depreciation of plant and equipment	£70,063
Average wage per employee per annum	£674
Average cost to the company of superannuation per employee participating	£69
Average dividend per shareholder	£70
Average shareholding of 3,749 shareholders	467

Basic wage increases in Victoria from August, 1952, to June, 1953, totalling £1 per week per employee, now cost the company over £100,000 per annum. Increase in August, 1953, of 3/- will cost a further £16,000 per annum.

The movement of wage cost per employee per annum over the past five years has been as follows:—

1949	1950	1951	1952	1953
£454	£473	£458	£663	£674

Australia's Transport System.

During recent years it apparently has become the policy of Australian State Governments to so restrict by regulation the operations of inter- and intra-State road transport, that this channel for the distribution of primary products and manufactured goods is prevented from being as effective a force in developing the Australian economy as it should be, particularly in provincial and rural districts.

The general public pays a tremendous bill for transport, both through direct charges and taxation, and the cost of transport and distribution intimately touch the daily lives of each citizen. Those engaged in industry, commerce and trade are utterly dependent upon efficient transport to lower the costs of internal distribution and to effectively serve overseas markets.

In time of national emergency all forms of transport, and particularly road haulage, would be required to serve the nation.

It follows that Australia cannot develop and prosper and, in fact, could scarcely exist without ever improving transport, and this is not achieved by restrictive practices calculated to bolster up a Governmental instrumentality. It must be self-evident that any Government policy which restricts an efficient and rapidly developing service, with a view to safeguarding a service which has not kept pace with the needs of the community, is detrimental to the national interest and seriously retards national development. Such a policy is short-sighted in the extreme, in that it raises costs of production and reduces the living standards of our people.

Current Outlook.

During the last quarter of 1952-53 and the first two months of this financial year there has been a steady and consistent upward trend in both sales and profits. It is apparent that wholesalers, retailers and manufacturers have now reduced their inventories to satisfactory levels, and are now ordering to take care of current needs.

Approximately 143,000 new motor vehicles were registered during the past year and Australia's fleet of private and commercial vehicles rose to an estimated total of 1,712,000 as at June 30 last. A rising demand for replacement parts and for servicing equipment and engineering services associated with the maintenance of motor transport is, therefore, inevitable. In addition, the remarkable progress made by Motor Industry Manufacturers and Assemblers in increasing the Australian content in their vehicles, has provided an increasing demand for our factories' products.

During the past five years a policy of expansion has been vigorously pursued in all phases of our operations, and we are now in a very good position to meet and match demands made on us. We are very conscious of the need for unceasing effort to improve the products of our factories, and to further this objective we are constantly strengthening our engineering staff and our facilities for testing and experimental development work. A considerable amount of capital has been tied up in new projects which have not yet commenced to pay dividends. Additionally, a great deal of newly installed machine tool equipment was not brought into full production last year.

Currently, sales are at a high level and an occasional all-time record is beginning to be reported by company managers for one or other of our products.

The future can be viewed with confidence.

Robertson & Mullens Ltd.

Booksellers, Publishers, &c.

Reg. Office: 107 Elizabeth St., Melb. **'Phone:** M 1715. **Directors:** J. B. Tait, Q.C. (Chairman), F. W. Campbell (Manag. Director), J. G. Gillespie, G. Packer. **Auditors:** Brentnall, Mewton & Butler.

34th Year ended June 30, 1953. Meeting September 15, 1953.

A slight reduction of sales occurred for the first time in some years. Although expenses were reduced, profit fell by £2,519 to £13,954, out of which usual dividends of £11,569 were paid.

In addressing shareholders at the Annual Meeting on September 15, the Chairman, Mr. J. B. Tait, Q.C., said—

After providing £12,784 for income tax and £8,246 for depreciation of fixed assets, consolidated profit attributable to Robertson & Mullens Ltd. is £14,167—a reduction of £2,149 on last year's figures.

Trading Conditions

The year under review has been a difficult one and trading conditions were the worst experienced for some years. Until this year rising costs and substantial and continual increases in wage rates were able to be met substantially by increased turnover, but during the past year the combined effect of import restrictions, which particularly affected our stationery business, and the changed financial situation which restricted the purchasing power of our customers has resulted in a slight reduction, instead of an increase, in sales. At the same time costs and wage rates have continued to rise although to a somewhat less severe extent. In the circumstances your Board has faced the position that the profit margin can be retained only by some reduction of expenses and has sought in increased efficiency a lowering of selling expenses and control of overhead to counteract the levelling off of sales. In the result consolidated expenses have been kept down and show a reduction of over £3,000 from last year, and the drop in net profit is less than might have been expected.

Having regard to the difficult conditions affecting the entire national economy during the period, the Directors regard the result of the year's operations as satisfactory.

Dividend

The year's results have enabled the Directors to recommend again payment of the dividend at the rate of 9% to which the dividend was raised three years ago. The final dividend recommended is 5% on both Preference and Ordinary Shares, making with the interim dividend of 4% paid in February, a total of 9% for the year.

At the same time we have transferred an additional £3,000 from profits for the year to General Reserve, making the General Reserve now £60,000.

Prospects

Furthermore, I am sure that you will be gratified to know that the first two months trading of this year shows a considerable increase in sales over the same period last year. Whether can be taken as an indication of the trading prospects for current year remains to be seen, but unless unforeseen char in the economy take place, then, with the present close anal and control of costs by your Board, the Company's trading op tions for the forthcoming year are viewed with confidence by Directors.

Stocks

Careful attention to the need for a more liquid cash posi and of increasing the rate of stock turnover has resulted i reduction in consolidated stocks by £27,875, a decrease in mort by £15,000 and has assisted towards converting a consolidated overdraft of £21,917 into cash in Bank of £9,241; thus putting Company in a strong position to meet the requirements of fu trade and to pursue the Directors' policy of seeking additi avenues of profitable trade. In this connection we are at pre negotiating for a new interest of which I hope to have somet to say to shareholders in the future.

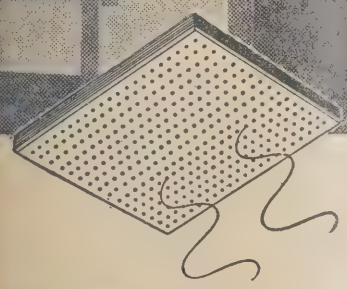
Subsidiaries

In spite of the difficult trading conditions over the past the operations of our subsidiary Companies were satisfactory, we have brought into the parent company the same dividend last year.

Our London Office as at 1st June, 1953, was closed and activities were taken over by our London subsidiary comp Robertson & Mullens (Great Britain) Limited. Due to ill-h Mr. Maurice who was our representative in London for so n years, has resigned from the Board of Directors of the Lo Company and his place on the Board of that Company has taken by Mr. G. Lormer, whose Australian connections and busi interests in London make his acceptance of the position of C man of Directors of our London subsidiary an addition of stre to our Company.

Staff

I desire again to express the thanks and appreciation of Board to all those executives and employees of the Company its subsidiaries who have given of their best under the dif conditions of the past year, and I feel sure that shareholders wish to join with us in our appreciation.



484 traps in each 12" square tile reduces noise by 65%.

Rural Bank (Sydney) installed noise-absorbing Cane-ite Acousti-Tiles in their Billing Department without any interruption of office routine

Cane-ite Acousti-Tile are as easily installed over existing ceilings as in new construction. When noise has been excessive they are often continued part-way down the wall as seen in this photograph of one of the offices in the Rural Bank which now enjoy Acousti-Tile quiet.

You will find Cane-ite Acousti-Tile in many other banks and Government offices, churches, clubs, broadcasting stations, hotel bars and telephone booths throughout Australia.

As sound waves hit the tiles they are absorbed by the 484 noise traps in each tile—they dissipate instantly.

QUICKLY INSTALLED — NO INTERRUPTION OF BUSINESS!

As reinforced concrete engineers and manufacturers of reinforced concrete products, the company supplies an Australia-wide market. Its equipment and processes are also being gradually developed in overseas countries, for which royalties are received.

Improvements have been made to factories at Cairns, Sydney and Springvale, Victoria.

Details of research projects are given in the Chairman's Address, reprinted below.

Net tangible asset backing (book values)—£1/8/5, allowing for uncalled capital.

The following report presented on behalf of the Directors by the Chairman, Mr. H. C. Clark, was circulated to shareholders with the Annual Accounts—

The accounts for the year, after providing £64,000 for income tax, show a profit of £98,092 to which must be added £2,132 available from the preceding year, making the total available £100,224. After deducting the March interim dividend of £13,639, a balance of £86,585 is available for distribution which the Directors recommend be appropriated as follows:

Final dividend on the 273,902 ordinary stock units of £1 each at the rate of 5 per cent. for the half year ended June 30, 1953—equal to 1/- per stock unit (making 10 per cent. for the year)	£13,695
Dividend on the 50,000 £1 ordinary shares paid to 10/- at the rate of 5 per cent. for the half year ended June 30, 1953—equal to 6d. per share	1,250
Bonus dividend of 5 per cent. on each of the ordinary stock units of £1 each—equal to 1/- per stock unit and of 2½ per cent. on each of the 50,000 £1 ordinary shares paid to 10/—equal to 3d. per share. (Large amounts were received from royalties and sale of patents. It should be noted that the overseas income will not necessarily reach in future years, the amount received in 1952-53)	14,320
Transfer to general reserve	45,000
Transfer to development reserve	10,000
Carry forward	2,320
	£86,585

Except for the amount received from the sale of patent rights overseas, the accounts have not been materially affected by items of an abnormal nature.

The record year's profit was mainly due to these factors:

The turnover was 20 per cent. higher than in the previous year.

Overseas income increased.

Greater efficiency and cost savings were achieved by better plant and methods.

Balance Sheet Changes

Issued Capital. 1,827 ordinary stocks units of £1 each were issued in payment for land and buildings purchased (two transactions—one for 700 stock units and the other for 1,127). In addition, the first instalment of 10/- per share on the new issue of 50,000 £1 ordinary shares was paid up bringing the paid-up capital of the company to £298,902. It is not anticipated that the balance of 10/- per share will be called up before June, 1954, at the earliest.

Reserves. The General Reserve will be increased to £112,558 as a result of the appropriation recommended in this report. A new reserve of £10,000 (Development Reserve), has been created to provide a fund for promoting the use of our processes overseas and for other special projects. A Share Premium Reserve of £873 has been created as the result of the issue of 1,127 ordinary st units of £1 each at a premium of 15/6 per stock unit in paym for land and buildings purchased.

Current Assets. Net current assets increased by £44,414 lowing the raising of additional capital and additions to the serves. Current assets are now 2.28 times current liabilities.

Fixed Assets. These increased by £38,474 during the year to the purchase of four freehold properties and the provision further plant and equipment.

Patents. During the year £706 was spent on patents but was charged against the profits for the period.

Materials

During the year, the supply of raw materials did not, general, present any great problems. Imported cement has to be procured for the Cairns plant, but overall the situation been satisfactory.

Plants

Improvements have been made to several of our factories. Cairns (N.Q.) a freehold site was purchased and the plant is be transferred from the present rented site. New and up to machinery is being substituted for such of the old plant as become obsolete. The Sydney plant was enlarged and impro and we purchased a 20 acre site as provision for future expans The Springvale (Melbourne) plant is being improved by the stallation of a new and mechanised plant for the manufac of large diameter pipes. A house property intruding into our at Springvale was purchased for use as an office building for central engineering staff. The plant manufacturing shop at Spr vale was improved by the installation of new machine tools the fabrication and repair of our own plant and for the struction of plant for export to our overseas clients.

Our Customers

We have largely overtaken the arrears of orders existin June 30, 1952 and are now able to give prompt delivery ser Our products have been improved. Our selling prices rema unchanged at most branches, notwithstanding increases in mate and labour prices. This was possible because of improved effici and methods, and higher turnover.

Prices of concrete pipes in Australia are very low by v standards, taking into account rates for cement and labour

The following table shows cost rates and current prices of in Australia, India and South Africa. The quality and test formance of the Australian pipes are superior to those of the two countries. The Australian pipe prices are much lower in tion to costs of cement and labour.

Country	Price of cement per ton	Price of labour per hour	Price of F 12" dia.	24"
Australia (Vic.)	£10 7 0	6/9	7/-	
India	£8 0 0	0/6	6/9	
South Africa	£5 12 6	2/-	5/6	

that:
In India cement is 22 per cent. cheaper, labour more than 90 per cent. cheaper and the price of pipes rather higher than in Australia.
In South Africa cement is 46 per cent. cheaper, labour 65 per cent. cheaper, and pipes only about 20 per cent. cheaper than in Australia.

During the year, the level of demand for our products tended nwards, due to the reduction in public works programmes, but ains high enough for profitable operation.

Efficiency

The steady effort by our engineers to improve plant and methods continued, and the output per employee has thus been further roved. Under the Rocla Incentive Plan of payment by results, a earnings averaging 30 per cent. of standard wage were paid mployees.

Overseas

During the year one of the leading United States manufacturers hased rights to certain of our processes. Royalties were also ived from other sources abroad. Negotiations are at present eeding with Indian interests for the use of our processes there. General Manager (Mr. F. L. Fitzpatrick), recently visited that ıtry and Pakistan.
We have entered into a large and profitable contract for the ly to the Government of Pakistan of pipe making machinery services. The benefits from this contract will be spread over next 5 years and more. Under the Colombo Plan the Commonlth Government is to pay for the plant, and the Pakistan Governt is to pay royalty on the pipes manufactured on the plant.
Other enquiries from overseas manufacturers re Rocla processes a prospect of further earnings from overseas.

Our Employees

A most harmonious and co-operative spirit between our emees and the management has continued. Works committees cone to contribute to smooth and efficient working.
There are now 122 employee shareholders, who hold 34,064 res.
The total of the Rocla Provident Fund now exceeds £76,000. ing the year, the Directors decided to pay £2,700 to the credit he Reserve Account of the Provident Fund from the proceeds n overseas patent sale in recognition of the employee contribu- to the development of the new process. The Provident Fund, ributed to by employees and the Company, is a fine safeguard employees, and a significant result of the co-operation previously rred to.
The Directors record, with pride and appreciation, another year fine effort on the part of the employees of every grade. We eve that the work-effort level throughout the Company compares n the best in this country or overseas. Overseas visitors exenced in the pipe industry have commented upon the high effortl in our plants.

Research

An active research and experimental programme is being car- on, and a number of patents in Australia and overseas have n applied for. We consider research as one of our primary essential activities and the best form of insurance for the ure. Among the significant developments from recent research

An improved pre-stressing process for pipes on the internal exsion principle. The elaborate and expensive "cores" previously essary have been eliminated by the use of a special chemical tion through which hydraulic pressure is applied on the pipe face. This solution has the remarkable property of forming, on act with the concrete, a rubber-like film which seals off the tion from the concrete. Patents have been applied for in this several overseas countries.
A new protective treatment has been developed which greatly eases the resistance of concrete to all forms of corrosion. Aly this process has found useful application in handling corro- problems in factories.
Our Chemical Division is finding a growing market for this other chemical products for use in construction and maintenance k in industry and in public works.
A simplified procedure and apparatus for "post-stressing" beams, s and the like. This system has been successfully applied to construction of a bridge in Queensland. It has substantial adtages over previously known systems, in that no expensive fits are left in the finished job as is necessary with other systems.

The General Situation

Australia has enjoyed another year of good seasons and high ·t prices, but there are increasing signs that, at the current of costs in Australia, our competitive situation in overseas kets is very weak. If we cannot compete in overseas markets if the prices for our staple exports should fall, our position ld be critical and employment would certainly suffer. It seems time that conflicting sectional interests should take stock of common danger, and develop a measure of sensible co-operation le there is yet time. In particular, it is reasonable to expect Trade Unions and Employer bodies should develop some coative effort for greater annual productivity per head.
Ministers of the Crown and others speak much of the inadey of funds with which to carry out needed national works services. The cost level however, is largely the creation of wages system, coupled with the hours and holidays policy. ously any increase in wages or reduction in working time, out a compensating increase in productivity, will raise costs impede national progress. Yet many of the people who com- of financial stringency and its retarding effect on the works rammes, have actively promoted the high-cost situation, by attitude on such matters as extra holidays and long-service leave, reduced weekly hours and high penalty rates for week-end work.
It has been clearly shown by the International Labour Office (United Nations) investigators and others that real wages depend on productivity, and that the only certain way to increase real wages and hence the standard of living, is to raise per-capita productivity. In other words, better methods and better work effort are necessary in the interest of labour and of capital, and both will suffer if it be not forthcoming. Both too are responsible to do something about it. Our community record in this respect, of recent years, is none too good. In an era of the sellers' market many employers have become slack in their task of improving efficiency, whilst employee organisations, pressing for higher basic wage, more holidays, long-service leave and the like, have not paid any great attention to the effect these things must have on the national cost structure and on productivity.
It is very important that each one of us should grasp the essential facts:
Only higher production per man can give us the higher standard of living we all want.
More holidays, with no increase in productivity in the working time, certainly mean a lower standard of living.
Increased production costs jeopardise our country's competitive position overseas and in our own markets, and are a threat to prosperity and security of employment.

Directors' Fees

At the last Annual General Meeting, Shareholders requested that consideration be given to increasing the fees of the Directors and, in the circumstances, the Directors feel justified in seeking the approval of the shareholders for an increase of the Directors' Fees from the present total of £400 (4 @ £100 per Director) to £850 per annum to be apportioned among the Directors at their discretion.
The present Directors' Fees (£100 each per annum) were fixed in 1947. The Company's size and volume of operations have increased very considerably since then. Apart from the increased scope and complexity of the business the general level of salaries and wages has more than doubled since 1947.

The Future of our Company

We face a time when it may be more difficult to secure orders in the volume to which we have grown accustomed. This constitutes a challenge for us—a challenge to produce better and cheaper products—new lines perhaps, and a better and more vigorous sales effort. For all this, we are well equipped. Our plants are in good shape, our team of people is competent and enthusiastic, and our reputation for quality and service is high. The prospects for the new financial year are therefore that we shall continue to operate profitably.

The following report by the Chairman, Mr. H. J. Mortlock, was circulated to shareholders with the Annual Accounts:

Sales show a decrease for the year, due principally to import restrictions and trade losing its abnormal buoyancy and returning to more normal conditions.

Stocks.

Stocks at balancing date are down considerably, due largely to import restrictions and are below trading requirements. The benefit from recently announced increased quotas should soon be reflected in trading and further relaxing of import control should also assist sales.

The reduction of stocks is reflected in transposing the bank overdraft to a substantial credit balance.

The net profit of £196,146 is £47,850 less than last year, this being due to reduced turnover and the increases in operating expenses, many of which are beyond the power of your Directors to control. The profit earned is sufficient to provide for taxatio dividend at the same rate as last year, and to further incre shareholders' funds by £53,096.

New Buildings.

In our last year's report it was advised that the building the assembly of cars and commercial vehicles was under const tion. This building is complete and the assembly has been operation for some months. The car service and repair section been transferred to the premises previously occupied by the assembly, and as anticipated, this has enabled the company continue to offer full servicing facilities to the increasing num of Standard. Triumph and Hudson owners.

Apart from the matters already mentioned, the activities the Company, as disclosed by the Balance Sheet and Profit Loss Account, have not, in the opinion of your Directors, materially affected by any items of abnormal character.

Steele & Co. Limited

Reg. Office: 191-201 Swanston St., Melb. **'Phone:** FB 2111. **Directors:** P. J. R. Steele (Chairman), Mrs. M. F. Thompson, B. G. Brett, D. H. McDonald, R. C. Staughton. **Auditors:** Flack & Flack.

Year ended June 30, 1953. Meeting September 15, 1953.

Although profit was £5,768 lower at £49,238, dividend was restored from 10% to 14%.

	Steele & Co. and Subsidiaries.			Steele & Co. Ltd.

Formed into a public company in 1950, this old-established furniture retailing organisation has its main trading facilities at a modern store in Swanston Street, Melbourne.

Following import restrictions, stocks were £95,998 lower, and directors hope that relaxation of restrictions will permit a better-balanced stock of floor coverings to be maintained.

Net tangible asset backing (book values in consolidated balance-sheet)—8/3 for each 5/- stock unit. At latest price of 8/6 yield is £8/4/9 per cent.

Steele & Co. Limited

The Chairman, Mr. P. J. R. Steele, in addressing shareholders at the Annual Meeting on September 15, made the following remarks:—

We are all gratified to learn of the reduced company taxation rates, which mean a reduction of approximately £8,500 on the amount provided for taxation for the year ended June 30, 1953. The 10% relaxation in import restrictions was also very pleasing.

During the year Mr. A. T. Coburn joined the Company as Secretary. The General Manager, Mr. H. V. Buckingham, and Staff are congratulated on the very satisfactory result for the year, and thanks are due to them for their loyalty and co-operation.

A special word of praise goes to Mr. U. L. Davies and the Display Staff for their wonderful effort in winning the Furniture "Oscar."

The new financial year has indicated an increase in sales compared with the corresponding period of last year and this factor, coupled with an apparent levelling out in expenses, should assure the maintenance of our present profit rate.

Snows Men's Wear Limited

Chain Stores, Men's Wear.

Reg. Office: 244 Flinders St., Melb. **'Phone:** C. 5100. **Directors:** Sir Sydney Snow, K.B.E. (Chairman), Sir Gordon Snow (Manag. Director), F. G. L. Harding, N. E. Lockhart, H. W. A. Neate. **Auditors:** Fuller, King & Co.

16th Year ended July 31, 1953. Meeting September 23, 1953.

Although turnover was low early in 1953, it later improved, but total sales were lower than in the previous year. Profit after taxation at the old rates was £28,117, to which must be added an amount of £6,150 over-provided, resulting in a final profit of £34,267, which is £3,529 more than last year.

The company operates a chain of 17 men's wear stores in Melbourne and suburbs, Mildura, Geelong, Bendigo, Ballarat and Adelaide. Further expansion is being considered.

During the year stocks fell by £30,503 and bank balance improved by £34,223 to a credit of £14,673. Current assets exceed total liabilities by £274,593.

Since the close of accounts, trade has been buoyant.

In addressing shareholders at the Annual Meeting held on September 23, the Chairman, Sir Sydney Snow, made the following remarks:

In common with many other businesses, difficulty was experienced in maintaining turnover during the early months of 1953 and though sales increased during the latter part of the trading year, the "leeway" was not quite recovered and we finished with a lower turnover. Strict control of expenses, however, enabled us to recover a satisfactory profit. This was arrived at on the pre-budget basis of taxation and the new rates somewhat improve the position—actually by the sum of £6,150.

Since the close of accounts, trade has been particularly buoyant and appears to be "set fair" for the current year. This we feel is largely due to the introduction of a new system of stock control which enables our merchandise managers to maintain a much closer supervision of their stocks and at the same time be fully informed of the day to day requirements of our customers.

Overseas Connections

One of your Directors, Mr. Lockhart, visited the U.S.A. and England during the year to seek information regarding the most modern systems of stock controls and his reports are proving very valuable. Mr. Lockhart has again gone to London, for twelve months, to take charge of a new buying organisation in that City, which will buy for Snows Men's Wear Limited and Sydney Snow Pty. Limited. We feel that the important step of having our own overseas office will have very beneficial results to the Company.

Future Policy

Shareholders will recollect being informed last year that a new branch had been opened at Box Hill—the result has been fully up to expectations.

In conformity with the Company's policy of expansion, two new branches were opened during the period under review, one at Northcote and one at Frankston; in each case your Directors are well satisfied with the prospects. Other sites are continually being offered to us and are carefully examined—one very promising location is under observation at the moment and will in all probability be acquired shortly.

Balance Sheet

It will be observed that the liquid financial position of the Company is very sound. Current assets at £506,496 are in the ratio of over 5 to 1 of current liabilities of £98,930 and even if the fixed liability of the secured mortgage loan is taken into account, current assets are still in the ratio of 2 to 1 of all liabilities including provision for income tax and the proposed final dividend.

Depreciation of Plant and Fixtures and writing down of Leasehold Ingoings has been provided on the usual generous scale and now appear at a very modest percentage of their real value.

Trade Debtors are reduced by £36,000, a figure which reflects careful supervision.

Trade Creditors are £30,000 higher but, at the same time, a Bank Overdraft of £20,000 has changed to a credit of £13,000.

In all, we feel the affairs of your Company are in a very sound condition and that prospects are good.

Staff

May I here tender on behalf of the Board, and I feel sure on behalf of Shareholders also, our grateful thanks to the Executives and Staff of the Company for their splendid co-operation during the past year.

Net tangible asset backing (book values in consolidated balance-sheet)—5/8 for each 5/- share.

The following summary of the year's operations was given by the Chairman, Mr. E. A. Alstergren, to shareholders at the Annual Meeting held on September 11:

The consolidated net profit for the year after providing £13,001 for depreciation on Fixed Assets, and £22,770 for taxation, amounted to £33,523. The net profit thus obtained for this year is £10,074 less than last year, but is still regarded as satisfactory.

During the year your Directors transferred an amount of £27,500 to Dividend Equalisation Reserve. Including the Dividend Equalisation Reserve, the amount of accumulated profits, after allowing for the final dividend payable today amounts to £69,837 or 41.7% on the issued capital of the Company. I would emphasise that these accumulated profits resulted after only 2½ years' operations.

In August, 1952, the activities of your Company were extended to cover the rich Riverina Area of New South Wales, by the purchase of the business of W. Day and Son at Griffith. The purchase price for this business was £13,500, of which £6,000 was paid in cash and £7,500 was satisfied by the issue of shares in Timber Holdings Limited.

During the year fixed assets increased from £161,512 to £193,882. The increase is reflected by the addition to the Fixed Assets of those owned by W. Day and Son Pty. Ltd., and also to the developmental programme announced last year for Ruoak Timbers Pty. Ltd., and East Gippsland Timber Co. Pty. Ltd.

Stock on hand has increased from £67,897 to £111,422. The stock held by W. Day and Son accounts for part of this increase, the balance being made up of the increase of stocks held by Ruoak Timbers Pty. Ltd. in the course of seasoning and manufacture.

A few comments are now offered on the activities of the operating Companies:—

East Gippsland Timber Co. Pty. Ltd.

During the year under review this Company milled 3,810,000 super feet of logs. The new mill which I indicated in my last report was in the course of construction, has now been completed and will shortly be in full production.

With the allocation of a further area by the Forests Commission, supply of logs is assured for both mills. The timber from this area is admirably suited for house construction, and your Directors are pursuing a vigorous policy to ensure that the increased output will be readily marketable.

Trafalgar Timbers Pty. Ltd.

Logs sawn by this Company for the year amounted to 2,150,000 super feet obtained from our freehold forests and Crown Lands, and areas over which the Company has obtained licences from the Forests Commission.

In view of the assured source of logs and the proximity to markets, the continued success of this Company is anticipated.

Ruoak Timbers Pty. Ltd.

During the year ended June 30, 1953, the full amount of our allocation from the Forests Commission, 8,000,000 super feet of logs, was milled.

The licences held by this Company are in some of the best Mountain Ash country of Victoria, and because of its high quality the products of this Company are in much demand. To meet the demand for this timber a mill at Alexandra was purchased from Proctor Bros.

Since the close of the financial year, the Directors have purchased a site at Shepparton, where some years ago this Company had a thriving retail business. The development of this site will give this Company a wider field of operations.

Your Directors have obtained the exclusive franchise for Victorian Country Towns for Blundell Spence Paints. The co-ordination of this agency with our main business should prove valuable.

W. Day and Son Pty. Ltd.

This Company is already on a sound footing. The mill purchased from W. Day and Son was unfortunately destroyed by fire soon after purchase, but a new mill has since been built on more modern and efficient lines, and has been operating successfully for the past seven months, milling local Murray Pine. In addition, this Company provides a further outlet for the products of the other subsidiary companies.

A builders' supply business has already been established in conjunction with our sawmilling at Griffith.

General.

In my last report I indicated that the outlook in the timber trade was causing your Board some concern. Although conditions have not materially altered since that date, it is felt that with the development which has taken place this year the outlook for Timber Holdings Limited seems particularly good.

I now have pleasure in moving the adoption of the Balance Sheet of Timber Holdings Limited as at June 30, 1953, and the Profit and Loss Statement for the year ended June 30, 1953, and the Directors' Report thereon.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings. Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

Net tangible asset backing (book values in consolidated balance-sheet)—7/-.

The following remarks were made by the Chairman, Mr. E. A. Alstergren, at the Annual Meeting on September 17:

The consolidated net profit for the year was £24,178, after providing £10,201 for taxation, and £8,070 depreciation on fixed assets. Allowing for the final dividend of 4% payable to-day the accumulated profits to be carried forward as shown on the consolidated statement of profit and loss amounts to £38,266. The accounts were published before the presentation of the Federal Budget, in consequence of which taxation provision is £2,100 in excess of the amount ultimately payable. The saving will be reflected in next year's figures.

In our consolidated statement of assets and liabilities and consolidated statement of profit and loss, figures as at June 30, 1952, are not shown because the accounts of Tasmanian Plywood Mills Pty. Ltd. are incorporated for the first time in this year's figures, and therefore any comparison with last year's figures would be misleading.

The purchase of Tasmanian Plywood Mills Pty. Ltd. was approved by shareholders at meeting held on August 21, 1952, the consideration being an amount of £46,000 payable on very liberal terms. A few comments are now offered on the activities of the operating Companies:

A. E. Hilder Pty. Ltd.

During the year under review 2,700,000 super feet of sawn timber was cut by the Company's main mill at Sulphur Creek, comprising timbers for furniture, home building, and structural purposes, all of which are readily marketable. The full benefit of plant extensions effected during January will be felt during the current financial year, with an anticipated increase in production.

The Loyetea Mill produced 120,000 super feet of sawn sassafras, mainly used for turnery purposes. Production at this mill can be increased to meet market demands.

Loongana Sawmill Pty. Ltd.

In my last report I indicated that the Company's main mill, situated at Cambridge, near Hobart, had been destroyed by fire. This mill has now been rebuilt on freehold land acquired for the purpose and is cutting approximately 25,000 super feet of sawn timber weekly. It is anticipated that production for this mill will be increased to 50,000 super feet of sawn timber weekly during the current financial year. To operate in conjunction with this mill a case factory has been established to cater for the requirements of the fruit industry.

With the easing of labour conditions the Mill at Loongana will operate again in the near future. Production will comprise selected hardwood for floorings, weatherboards, and other housing timbers.

Tasmanian Plywood Mills Pty. Ltd.

This factory in the past produced solely hardwood and myrtle plywood. In the course of re-organising the affairs of this Subsidiary, your Directors have investigated the possibility of producing pine plywood, and are pleased to report that a satisfactory market has been found in this line. This development will enable Hardwood and Myrtle to be used in the production of high grade plywood and veneer, and pine plywood will be used to satisfy the demand for the less expensive product.

During the year under review this Company made a small contribution to the accumulated net profits of the Group. However, it is anticipated that during the year ended June 30, 1954, Tasmanian Plywood Mills Pty. Ltd. will become a substantial profit earner.

Kilndried Timber Industries Ltd.

Although the final profit figures for the year are not yet available, the directors of this Company have recommended to shareholders the payment of a final dividend of 7½% for the year ended June 30, 1953, thus maintaining the 12½% for the year.

Bruny Timbers Pty. Ltd.

Since the close of the financial year a sawmill business previously conducted by A. J. & J. W. Dicker, at Bruny Island, has been purchased for £14,000. Attached to this business are substantial freehold and leasehold forests of Blue Gum, a much sought after timber. It is anticipated that this Company will, during the current financial year, add substantially to the consolidated net profit of the group.

General

The demand for the products of the subsidiary companies of Timber Holdings (Tasmania) Limited is increasing and, with our increased capacity, the future of this Company may be faced with optimism.

Wilke & Company Limited

Printers, Bookbinders, Stationers.

Reg. Office: 19-47 Jeffcott St., Melb. **'Phone:** FJ 9011. **Directors:** D. A. Bowman (Chairman), G. M. Cathie (Manag. Director), G. J. Cathie, R. J. McArthur, M. G. Roberts, H. H. W. Wilke. **Auditors:** Hancock & Woodward.

32nd Year ended June 30, 1953. Meeting September 14, 1953.

Sales rose again, and profit was steady, returning 13.2% on ordinary capital, after meeting the preference charges. Dividend was raised from 7% to 8%.

In his address to shareholders at the Annual Meeting on September 14, the Acting Chairman, Mr. G. M. Cathie, said:—

The Company's affairs have continued to prosper during the year, with a further increase in Sales and Profits. The increase in Sales has covered all classes of work excepting book production, which is still handicapped by the rise in costs over the past four years. This position was aggravated by the Government's introduction of import restrictions. Due to high pressure publicity from libraries, English publishing houses in Australia, educational and religious bodies, the restrictions were lifted on the importation of books, even on fiction of a poor standard. The Government did not apparently fully realise the effect this would have on the industry here. Cloth, boards and paper, the main raw materials for books, were heavily restricted, and Australian materials were, until quite recently, on a severe quota system. This was an injustice to Australian firms, for on the one hand, it allowed books to be imported into Australia without duty and without restrictions, and on the other hand, restricted the raw materials necessary to produce the same article by Australian Companies.

The demand for printing remains steady, and we are confident that we will obtain our share of the work offering. Orders on hand for completion in the year just commenced are already considerable.

Reserves.

A total of £16,899 has been added to the Company's reserves out of the profit for the year. This is in accord with the Board's policy, and is most satisfactory when combined with a higher dividend.

Staff.

We have again enjoyed a year without problems in relation to staff. General efficiency throughout has improved, and in the next half-year we anticipate a record rise in numbers of employees.

I would like to make special mention of the work of the engineer's department, which has been mainly responsible for the moving of the Winchelsea and Yarraville heavy machinery plants (excluding the rotary press) to Clayton. Interruption to the flow of work has been negligible, and the operation has run strictly to schedule.

Stocks.

We have commented on this important item in the Annual Report which has been issued, but I should also note that market conditions, although much improved, have not yet stabilised sufficiently to allow large stock reductions. However, we have this matter constantly under review, and we anticipate some further reductions during the year.

The printing trade has taken a large share of the impact of falling paper prices over the last two years. We have again been faced with the necessity of writing down some lines in this financial year, but we feel that this has been minimised by a judicious buying policy over the past five years.

Clayton.

We have been able to arrange the finance necessary for the erection of the new factory, without recourse to the issue of fresh capital, and the accommodation obtained will enable us to carry on satisfactorily.

The initial changeover period will be costly, but the consequent concentration of operations should make for considerable savings.

Personal.

Mr. M. G. Roberts, who has just returned from his visit to England and the Continent, has not yet had time to pass on information he gained during his six months' trip. His report will be discussed by your Directors shortly, and any new ideas he gleaned should be of interest. In conclusion, I can reiterate that the coming year shows good promise.

The parent and subsidiary companies conduct well-established businesses, which fall under the following main headings:

1. Importers of printing machinery and printers' supplies.
2. Manufacturers of printing inks. This field is being steadily developed in co-operation with American associates.
3. Manufacturers of nails, screws and other wire products.

In August, 1953, the company issued £150,000 convertible notes of 20/-, repayable September 30, 1959.

Despite the recession in the building industry, sales of wire and metal products were a record, stated the Chairman, Mr. G. F. Davies, in his address to shareholders at the Annual Meeting on August 17. Mr. Davies' address reads:—

During the past trading year unusually difficult conditions were encountered as the result of import and credit restrictions imposed by the Government as anti-inflation policy. Imports of printing machinery and maintenance parts, also raw materials for use in manufacture, were severely restricted under the quota system. Credit restrictions heavily curtailed activities throughout the building industry and considerably reduced the volume of purchases by manufacturing industries generally.

Notwithstanding these difficulties, however, the planned development of the parent company and all subsidiaries was steadily maintained. Consolidated sales turnover was greater than in the previous year and the combined net profits of the company and its subsidiaries, prior to provision for taxation, totalled £129,685, or approximately the same as the £128,719 for the previous year.

As the result of the abolition of the ten per cent. provisional tax imposed on companies in 1951, the provision of £55,816 for taxation this year is less than the £58,666 required in the previous year. It is hoped that further substantial reductions in company taxation will be forthcoming this year and thus lighten the heavy burden on public companies which are playing an important part in the development of essential industries throughout Australia.

Funds invested by the parent company in its subsidiaries increased during the year from £482,109 to £531,388. The combined net profits of all subsidiaries, before taxation, totalled £68,284, as compared with £69,954 for the year ended April 30, 1952. In accordance with long-range plans for the company's subsidiaries, your Directors propose to continue increasing the potential of manufacturing subsidiaries and are confident this expansion will prove of considerable advantage to all divisions of our activities.

Printers' Furnishers Division.

During the early part of the trading year a noticeable recession was experienced in the printing industry throughout Australia generally, with a consequential reduction in the volume of purchases of new machinery and of printers' supplies. Toward the end of the trading year, however, conditions improved substantially and trading became stabilised on a more conservative basis than previously. Restrictions upon imports of printing machinery from non-sterling sources of supply continue to limit capital investments in modern plant.

Our developmental programme for the printing ink subsidiary continues steadily. Important items of new equipment have been installed and additional plant is in process of installation in our three factories. The range of manufactured products is being widened continuously, with the aid of the valuable technical assistance of our associates, the Interchemical Corporation of U.S.A. Our skilled technical staff has been increased in an endeavour to cope with the increasing volume of pre-production experimental work involved in the manufacture of new products. Additional important new items are anticipated as reaching the production stage during the present year.

Wire and Metal Products.

As previously mentioned, activities in the building industry throughout Australia were curtailed considerably during the year as the result of financial restrictions. We are pleased to report, however, that although orders for the company's wire and metal products were consequently reduced during a short period, the previous widespread demand has again resumed generally. As a result the combined sales turnover of this division for last year reached record figures and there is every indication that sales will continue during the present year at a high level under more stabilised conditions. We are progressively increasing the manufacturing capacity of this division by the installation of additional modern plant and equipment in order to meet the anticipated future demands throughout Australia for our wide range of wire and metal products.

Note Issue.

All shareholders of the company have been informed by circular letter of your Directors' decision to raise additional funds by the issue of £150,000 six per cent. registered convertible notes. This issue is being made to finance the planned expansion of our present factories in each division, also the building of new factories, and the installation of additional modern plant and machinery in all factories. By this further capital expenditure we hope to be able to keep pace with the increasing demands for our products resulting from the rapidly increasing population in all States of the Commonwealth and the consequential expansion of essential industries.

Shareholders' funds of Sidney Cooke Limited and subsidiary companies now amount to £1,075,532, including reserves and accumulated profits of £307,932. Stocks of raw materials and manufactured products total £511,756 and are slightly above the £500,079 stocks held at the end of the previous year. Capital invested in land and buildings increased from £478,010 to £503,236. Machinery and plant, after depreciation, also increased from £225,536 to £259,930.

Shareholders of Sidney Cooke Limited now number 948, of whom 72 per cent. hold less than 500 shares each, 14 per cent. between 500 and 1,000 shares, and 14 per cent. 1,000 shares or more.

Centenary.

I should mention that the year 1953 is of special interest in the history of this company. In 1871 the founder of the company, the late Mr. Sidney Cooke, arrived in Melbourne from England and commenced the business of ink-making. Later he purchased the printers' furnishers business of Freemantle and Company, which had been established in Melbourne in 1853, and this business became part of S. Cooke and Company. This year 1953, therefore, is the hundredth milestone in the history of the establishment of our printers' furnishers business.

Staff.

The number of employees of the company and subsidiaries now total 431, and the aggregate amount paid in salaries and wages last year was £297,560.

Your Directors again have pleasure in recording their appreciation of the efficient and loyal co-operation of our executive staff and employees in all companies.

The following address was given by the Chairman, Mr. L. A. Mellor, to shareholders at the Annual Meeting on September 7:

During the year under review the Company vigorously continued its policy of improving, in every possible manner, the standard of accommodation offered to its clientele.

The programme of renovating and refurnishing all bedrooms is proceeding satisfactorily and is more than half completed. Before the end of this year it is anticipated that each bedroom will be equipped with hot and cold water facilities and a telephone. All bathrooms in the centre block are being renovated and modernised.

Extensive alterations to the kitchen and store area, which are nearing completion, and redecoration of the dining room will result in improved catering facilities being available to guests and the public.

Structural alterations are planned for the basement area in order to relocate and consolidate service departments in one central position and provide improved staff amenities. As a result, space which will become available in the house will enable us to provide accommodation for an additional ten guests.

Basic Wage.

During the last three years the basic wage has increased in the following manner—

Year to June 30, 1951—An increase of £2.
Year to June 30, 1952—An increase of £1/15/–.
Year to June 30, 1953—An increase of £1.

Whilst it is regretted that increases may still occur, it is pleasing to feel that the rate of spiral has been checked.

Taxation.

The burden of taxation remains heavy, particularly now that the initial depreciation allowance on new plant has been discontinued.

It is noted with satisfaction that the Government intends to reduce taxation. It is sincerely hoped that the relief provided will also include company tax and payroll tax, the latter being a particularly heavy and unfair burden on such companies as The Victoria Limited, where wages and salaries form such a high proportion of total costs.

In this industry buildings are not used for the production of consumable goods but space is sold in which to eat and live. Therefore adequate provision for depreciation, particularly that due to obsolescence, is considered to be essential and is charged in the accounts each year. However, stockholders are reminded that the taxation authorities make no allowance for the depreciation of buildings.

Occupancy.

Occupancy continued to be satisfactory and at times was 100%.

Finance.

Gross profit from trading amounted to £69,652, compared with £55,500 in the previous year and net profit, at £24,365, improved by £3,341, after adjusting last year's overprovision for taxation of £613.

The amount provided for depreciation and amortisation was increased by £2,169 to £17,212 and provision for taxation, at £28,900, was £8,613 higher.

As in the previous year additional depreciation amounting to £1,600 was provided in view of the high cost of building improvements. It was also considered prudent to set aside a sum of £1,500 to provide towards the heavy cost of maintaining the Company's assets.

The increased net profit, achieved in spite of the still rising cost of wages, goods and services, was made possible by further improved methods of management introduced during the last few years.

The Directors recommend payment of a final dividend of 6% which, together with the interim dividend of 3% paid in March last, makes 9% for the year, an increase of 1% on the rate paid in respect of the previous year, and a reversion to the rate paid by this Company for many years prior to 1949.

Conclusion.

The Directors express their thanks to the executive officers and members of the staff for their continued co-operation which has contributed to the successful results achieved.

T. S. Gill & Son Ltd.

Shopfitters and Glass Merchants.

Conditions were difficult in the middle of the year, but most sections of the business are again working to capacity.

Factories at Preston and South Yarra produce shop fronts and store fittings. A new line of display panels and fittings known as "Klipiton" was introduced this year.

The following address was given by the Chairman, Mr. T. H. Gill, to shareholders at the Annual Meeting held on September 8:

In proposing the adoption of the balance sheet, together with the Profit and Loss Account for the year ending June 30, 1953, I would like to state that the net profit for the year, after making necessary provision for depreciation and other charges, is lower than that of last year. This was brought about by a number of economic factors, mainly the tightening of finances, this preventing a number of stores from proceeding with modernisation programmes which naturally affected the volume of the business. However, we are pleased to report that we are working on a number of store projects in Victoria and other States. Indications are that stores are now finding it necessary to improve their layouts and fixtures in conformity with modern requirements.

Glass Shortage.

Owing to import restrictions there has been a severe shortage of plate glass which has affected our sales in this section. It is anticipated that before long stocks will be available to meet all demands.

New Product.

In the near future a new line of metal display panels and fittings known as "Klipiton" will be placed on the market by us. "Klipiton" panels and fittings are ideal for bin top counters as used in chain and department stores. The panels can also be used on walls and as backgrounds for fixtures. The various fittings enable the display of almost any type of merchandise. Similar fittings are very popular overseas, and we are anticipating large sales of this line throughout Australia.

Our plant and equipment have been kept well up to date and are in good working order.

In conclusion, I should like to convey thanks to the company's staff for their cheerful co-operation and loyal support.

Windsor Hotel Ltd.

There was an increased demand for catering for social functions, together with improved revenue from accommodation, meals and liquor.

Following a revaluation of land and buildings, the company made a bonus issue in June, 1953, of 1-for-2 ordinary shares held, and all preference shares were converted to ordinaries.

Windsor Hotel Ltd.

In addressing shareholders at the Annual Meeting held on ember 9, the Acting Chairman, Mr. F. G. Herman, said:

Your company's trading operation over the past year can be rded as highly satisfactory. Net profit for the year ending 30 last, after providing £20,967 for depreciation on fixed as- and £28,500 provision for income tax, amounted to £25,201. parative figures for the previous year were depreciation on assets £16,938, provision for income tax £22,500 and net profit 81.

Revenue and Costs.

Additional revenue was obtained during the year from a con- able increase in functional catering, i.e., weddings, private ers, etc., and the general revenue from accommodation, meals liquor improved. Indications are, subject of course to economic ors over which the company has no control, that the ensuing should be a successful one, although the problem of increas- costs requires constant care by the management. Residential ls and accommodation establishments have a peculiar problem much as it would seem impossible to make a reasonable return he cost of any new building in order to extend their accom- ation facilities, consequently an extension of their earning city is limited. Those establishments built in the days of r costs have no doubt a better prospect for extensions as the can be averaged over the whole undertaking. As it is, a very occupancy is necessary to sustain profitable business and a inuous high occupancy in residential hotels must render con- able inconvenience to the travelling public, but accommoda- houses these days, because of high operating costs, simply ot afford vacancies at any time.

Chevron Ltd.

ie Directors were recently approached in the matter of the hase of shares in Chevron Limited, and were impressed with ässet value of the undertaking but, after receiving a report their investigating accountant and considering the whole tion, they decided not to proceed further in the matter and did make an offer for Chevron Limited shares. We are still hope- chat some day we will be able to extend our own accommoda- facilities.

Revaluation and Bonus Issue.

As you are aware, a revaluation of the company's land and dings was obtained on February 18 last and an amount of ,410 was placed to the credit of a Land and Buildings Revalua- Reserve account. From this reserve, a bonus issue of one nary share for every two ordinary shares held was made to nary shareholders, and preference shareholders were then given opportunity to convert their shares to ordinary shares on the s of one ordinary share for every one preference share held. necessary measures to do this were approved by the requisite prity of shareholders and the capital of the company was ed accordingly.

It is the intention of the Directors to immediately proceed to ease the authorised capital of the company from £212,375 to ,000. There is no intention at present to make any further e of capital, but we deem it wise to increase the authorised tal in case in the future a reason may arise fer an increase in ed capital.

Western Mining Corporation Limited

Registered Office: 360 Collins Street, Melbourne.

EXTRACTS FROM REPORT OF PROCEEDINGS AT THE TWENTIETH ANNUAL ORDINARY GENERAL MEETING OF STOCKHOLDERS, HELD ON THURSDAY, 10th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, in moving the adoption of the Report and Statement of Accounts, delivered the following statement—

Before proceeding with the business of the meeting I would like to pay a tribute to the memory of our late Chairman, Sir Walter Massy-Greene, who, as you know, was a director of the Company almost from its inception and Chairman for eight years prior to his death. He brought to the affairs of the Company a wide knowledge of business and finance, while his long political experience had made him convinced of the need for gold as the basis of international currency. He frequently expressed his belief with clarity and force at these meetings. Sir Walter Massy-Greene enjoyed the highest regard and friendship of all those who worked with him. He was the kindest and most helpful of counsellors. I am sure those of you who knew him personally or by repute share with us the regret we feel at his loss.

Major-General Sir Samuel Burston was appointed to fill the vacancy on the Board.

On behalf of the Directors I present for your approval the Reports and Accounts for the financial year ended 31st March. These have been distributed to members and with your permission I propose to take them as read.

Revenue and Profits

Net profit for the year was £189,255 compared with the £73,906 earned in the previous year. This was mainly due to additional dividends received from Central Norseman Gold Corporation N.L. from which we received £164,063 compared with £32,812 in 1951-52. Dividends received from Gold Mines of Kalgoorlie (Aust.) Limited amounted to £28,889, compared with £28,867 in 1951-52. Other income was comprised principally of Management Fees, Royalties, Rents, etc., amounting to £17,007 and, in addition, Depreciation written back in respect of Plant and Equipment realised during the year amounted to £4,595. This made a total of £214,554 to the credit of Profit and Loss Account out of which Directors' Fees took £2,290, Administration and General Expenses £13,899, Depreciation and Losses on Realisations of Plant and Equipment £9,110, leaving a net profit to be carried to the credit of Appropriation Accounts of £189,255.

This amount, together with the balance brought forward, £488,876, gave a total to the credit of Appropriation Accounts of £678,131. Taxation amounted to £4,098 and Dividends Nos. 10 and 11 each of 6d. per stock unit, which were paid on 22nd August, 1952 and 27th February, 1953, took £139,718 and left a balance to be carried forward to the credit of Appropriation Accounts of £534,315.

Since the close of the year Dividend No. 12, also of 6d. per stock unit, and taking £69,859 has been declared and was paid on 21st August, 1953.

Extra revenue has been received by the companies through the additional price received from sales on the free gold market, which are permitted by the Australian Government provided the gold is sold for dollars. The average price received through the last financial year for all companies of the group amounted to about 17/- per ounce, but has since fallen by about 5/- per ounce.

New Coolgardie—New Issue

In order to pay off the residue of the Western Mining Corporation loan and provide extra working capital, a rights issue at par to shareholders of New Coolgardie Gold Mines N.L., on a basis of one share for each five now held, is being made by New Coolgardie Gold Mines N.L. Western Mining Corporation is entitled to rights to 106,400 shares from this issue. Arrangements have been completed to sell these rights, which will leave Western Mining Corporation still holding 52% of the shares of New Coolgardie Gold Mines N.L.

Additional finance is needed by Great Western Consolidated N.L. to carry out an expedited development programme. This has been provided on loan by the Company's bankers, the loan being guaranteed by Western Mining Corporation Limited. In return for giving this guarantee Western Mining Corporation Limited is to receive the option to subscribe for 500,000 ten shilling shares at a price of eight shillings each for a period of five years from the 25th May, 1953. This option supersedes the previous option granted to Western Mining Corporation Limited.

Over the last few years output has been increased and the mines have been mechanised wherever possible. This has offset considerably the inevitable effect of basic wage increases against an almost static gold price.

Tindal's Mine

The plant, buildings and equipment on the Tindal's Mine, near Coolgardie, was purchased from the Western Australian Government for £35,000. The purchase was made primarily to secure plant needed for equipping mines other than Copperhead, owned by Great Western Consolidated N.L. Other equipment and buildings will be purchased by associated companies and any residue not required will be sold. The Corporation will at least be reimbursed; its expenditure and the acquisition has been most useful in making plant available at short notice.

General

Good industrial relations have been maintained throughout the year.

The use of Aluminium Therapy to reduce the dust hazard is becoming fairly general, all change houses in Western Australia being, by law, equipped with facilities for this treatment. majority of men take Aluminium treatment, which is voluntary

Uranium

For some time the Board has thought that the affairs of th Corporation would be more balanced if it engaged in the minin of other metals in addition to gold. In times of inflation economi conditions move against gold, whilst other metals tend to b buoyant during such periods.

It may be that development of uranium resources would pro vide a means of putting this policy into effect. The Board w accordingly endeavour to acquire a uranium prospect warrantin development. Should we succeed extra funds would be neede the actual form of any new venture remaining for decision the time. If we proceeded we would do so in conjunction wi our subsidiary Gold Mines of Australia Limited.

The Functions of Gold

Our late Chairman held the view that the gold miner shou take every opportunity of emphasising the use of gold, as, wi gold coins no longer circulating in people's hands, its real functio are not generally understood. Particularly is this so since, at t present time, gold is not being used to the best effect and, in t result, a most valuable factor in promoting trade and sound cu rencies is being stultified. It had, accordingly, been his custo at these Annual Meetings, to refer to the function of gold. Wi what advice I have been able to get, I propose to follow h example.

The subject can be introduced, as well as in any other wa by trying to answer a question put to me recently in the followi terms: "What is the use of gold? You cannot make locomotives build ships out of it!"

The answer, I venture to say, is that if gold is used to t best advantage the making of locomotives and ships and mo other things would be greatly facilitated. The function of g rests in its universal acceptability and its suitability as mon For centuries gold has been the principal medium of internatio settlement.

A recent article entitled "Imbalance of International Payment written by Mr. R. F. Harrod, for the International Monetary Fu has been drawn on freely in these notes. As part of his surv he describes the manner in which gold used to operate in following terms:—

> "Under the forces of supply and demand, gold came to ha a certain value in relation to goods, which enabled it to fu tion smoothly as a medium of reserve and settlement. T value varied somewhat from time to time under the influe of new discoveries or the exhaustion of existing sources. gold was becoming more abundant and reserves accumulati the authorities felt able to have an easy credit policy; t would tend to make prices move upward and the goods va of an ounce of gold downward. Conversely, if on the wh reserves were tight, a deflationary policy would prevail, pri would tend downward, and the goods value of an ounce of g upward. Thus the goods value of an ounce of gold, and ther the goods value of the world's monetary gold stock, tended be adjusted upward or downward so as to enable that monet stock to do the work required of it. This work was to prov sufficient reserves, by and large, to enable the authorities feel that they had enough to cover normal expected fluctuati in their balances. Individual countries might always get trouble, but if the majority of countries fell short, then deflationary process got to work and adjusted the situatio

Today, the price of gold has got quite out of relation to of goods and the old automatic process described above, wh gold promoted a balance between the various national econo has not been permitted to operate. The consequences on mone gold stocks and gold supply are shown in the following figu Professor Cassel had estimated in the 'twenties, when doubt a about the adequacy of gold supply, that monetary gold st needed to rise at about 3 per cent. per annum cumulatively maintain stable prices. In the period 1924 to 1929 gold st rose at the rate of 2¾ per cent. per annum, as compared with per cent. increase in the volume of world trade while the ag gate value rose only by 3.9 per cent. That is to say the gold supply, in consequence of the restoration of the gold sta at the pre-1914-War gold price, had fallen below that nece to sustain prices in the expanding economy. In 1924, mo gold supply amounted to 32 per cent. of the aggregate va annual world trade. In consequence of the fall in value of g in the depression, monetary gold stocks, by 1933, had increase 100 per cent. of world trade and gold stocks outside the amounted to 60 per cent. of the annual value of world trade. F 1933 to 1938 gold stocks increased by 6.3 per cent. per an cumulatively and the increment of gold supply alone was suffi to finance an annual increase of 6.3 per cent. in world trade. 1951, the picture had completely changed and gold stocks ou the U.S. amounted to 17 per cent. only of the total export and from 1945 to 1951 the world monetary stocks increased at rate of 1.1 per cent. per annum only. Mr. Harrod comment follows on this change:

> "There were three causes of this great change, of w the first mentioned was also one cause of the other two By 1950-51, the value of the dollar in terms of goods ent international trade had fallen to about four-ninths of its 38 value; but the dollar price of gold remained the same. sequently, the goods value of an ounce of gold had falle about four-ninths. (2) By 1950-51 the volume of world

had risen by about one-third; but gold production outside the United States and the U.S.S.R. had fallen from U.S.$928 million to U.S.$762 million. (By contrast, between 1936 and 1940 the production of gold rose by one-third). (3) An amount of gold equal to more than half the gold output in the period 1946-51 ($2,667 million out of $4,790 million) has gone into private hoards."

It has also been estimated that immediately prior to the crisis of 1931 when monetary gold stocks amounted to about $12 billion, of which about $8 billion was held outside U.S., short term international credits amounted to U.S.$10 billion. The recall of a proportion of these short term credits threw very heavy strains on the exchanges. Today, the short term international credits are estimated to exceed 22 billion dollars, and international monetary gold stocks are about 34 billion dollars, of which some 11 billion dollars are held outside the U.S.A. In consideration of the effects of the recall of short term credits the reserves held outside the United States are of far greater significance than the total monetary reserves. It is therefore easy to see that the recall of any large portion of these credits would again throw a very heavy strain on the exchanges and the need to guard against it is obvious.

Over the period during which these movements took place the gold standard had been restored in 1925 at the pre-1914 price of 84/- per ounce. This price ignored the inflation resulting from the 1914-18 War since the amount of goods which an ounce of gold could buy in 1924 had fallen to 61 per cent. of the 1913 figure. Whatever might have been the causes of the 1929-32 depression, the Note of Dissent to the report of the Gold Delegation of the League of Nations of 1932 showed that, in the event, the international gold stocks were inadequate to meet the pressure on them at the beginning of the depression. Following the collapse of 1931 a gold exchange standard was gradually established but was suspended in 1939 and still remains so.

In the 'thirties, the U.S.A. surplus was met by the importation of gold to U.S.A. which was much increased by a great flow of capital from Europe. In recent years, the surplus in excess of gold importations, has been met through the generosity of U.S.A. aid overseas.

But had the dollar value of gold risen in the same proportion as world trade, the annual value of newly mined gold would almost have sufficed at approximately 2.5 billion dollars, to finance the whole U.S. trade surplus without aid. In none of the movements of the various categories of goods comprising U.S. trade is there any change comparable with the change in gold. This might be put in other words by saying that had the inflation been recognised by revaluation of gold many of the difficulties arising from the current imbalance would disappear.

The world today is struggling with serious disequilibria in balance of payments of various countries arising from the inflationary courses of the last decade. These have resulted in import and other "beggar my neighbour" policies of various sorts. The statesmen of most nations wish to get away from them. They recognise that stability is essential to expansion of multilateral trade and better living standards but they are held up by the spectre of the unemployment of the 'thirties. Whichever may, in fact, be the greater evil, deflation is dreaded far more widely than inflation. If countries now subject to exchange and other controls are not freed from this fear, there is little hope of their being persuaded to give up those controls, however hampering to trade. Here, then, is the dilemma for the non-dollar countries; they do not want more inflation but if they are to stabilise on a gold-dollar standard at the present dollar price of gold there would be no alternative to a further depreciation of their currencies, or a deflation of a magnitude which makes them shrink from its consequences.

The history of currencies shows that a balance between inflation and deflation has only been achieved by a gold standard, in some form or other, which introduces a means of keeping in balance independent national economies. As compared with the old standard a new gold system has to cope with more rigid wage structures and more limitations on central bank action. To command general assent its impact on the economy needs to be less drastic and corrective measures slower in operation. Relatively greater monetary gold stocks will, therefore, be needed so that the run against gold from the country concerned can be sustained while the economy gradually readjusts itself. An increase in the price of gold is the only way that the total value of monetary gold stocks can be rapidly increased, since the annual increment from newly mined gold is far too small. An increase in gold price of the order of the increase in value of world trade would, by tending to remove the current imbalance in trade and providing greater monetary gold stocks, give the stability in which a new form of gold standard could be introduced. This, in other words, is return to convertibility, and it is submitted that a higher gold price is the only practical way in which it can be brought about in the foreseeable future. Critics of a higher gold price, as, for example, those quoted in the National City Bank of New York letter of January, 1953, although desiring to bring about convertibility, claim that increased gold price would only add to the inflation. It is suggested, on the other hand, that unless the U.S. Government itself chose to follow inflationary practices an increased gold price is the means whereby inflation would be checked. Convertibility will not be accepted until some way can be found of removing the fear of depression resulting from it and an increased gold price is the means whereby this can be done. With increased gold price convertibility could be accepted with some confidence that it could be maintained. In such an economic climate the solution of the "real" problems, referred to in the National City Bank letter, would become more possible of attainment.

Reference may be made here to one of the various objections raised against increasing gold price. This is that an increase in gold price would avowedly, initially at least, mean more gold flowing into U.S. and thence to Fort Knox. If this is a means of introducing a period of stability, may not this be a necessary stage to pass through to reach a satisfactory system of international trade? If the volume of trade from U.S. is to be maintained on present terms which show a surplus on U.S. account, this surplus can only be met by importation of gold, by gifts, or by widespread investment of U.S. dollars overseas. The only alternative to the above is the deflation of prices in the U.S. on a scale which many people would think neither desirable nor practicable. As affairs now stand, investment outside U.S. is on far too small a scale to meet the surplus due to various causes, high amongst them being fear of Government restrictions on return of capital or profits to U.S. Should means be found to do away with these restrictions, is not this the economic climate in which overseas U.S. investment might develop? Investment overseas seems to be generally recognised as the most satisfactory means of dealing with any U.S. exportable surpluses to the advantage both of the U.S. and the rest of the world. Trade may not always follow its present course and as U.S. irreplaceable resources, minerals and such like, are depleted, the flow of gold may in the future swing away from U.S. While the United States gold reserves may be regarded as adequate for present purposes any additional reserves which might be accumulated would become a welcome added store of value should the trend of gold turn away from the United States. These are great affairs which need to be regarded on a time scale commensurate with their significance. An answer will not be achieved if the main objective is clouded by subordinate aims. Our desire to do good, to direct trade into special channels whether for our own benefit or to aid someone we look upon as deserving, any fear of possible inflationary effects on the U.S. economy, or any regard for the plight of the gold miner, must be secondary considerations, however important they may seem. If, instead of inflation, we think of its consequences, political and otherwise, in the whittling down for many of lifetime savings for old age; in the disorganisation of business and discontent following sharply rising prices; or, instead of deflation we think of the hardship of unemployment or bankruptcies; or the burden on debtors repaying loans in money worth perhaps twice that in which the loan was contracted; then the value of gold in human terms becomes clear and certain.

Conclusion

I desire, finally, to record on behalf of yourselves and the Directors our appreciation of the services rendered by the Technical and Administrative Staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Directors, Sir Samuel Burston, K.B.E., C.B., D.S.O., V.D., F.R.C.P., and Messrs. J. Stanley Murray and J. Chester Guest were re-elected and Mr. Noel W. Buckley, Chartered Accountant (Aust.) of the firm of Buckley & Hughes, was re-appointed Auditor of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The Meeting then terminated.

Victoria Gold Dredging Company No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE SEVENTEENTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON TUESDAY, 8th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:—

Mr. L. Edwards was appointed to fill the vacancy on the Board.

I have pleasure in submitting the Report and Accounts for the year ended March 31, 1953. Shareholders will have received copies of these documents and therefore, with your concurrence, I propose to take them as read.

The Company's income was limited to net interest received, £213, Expenditure on Land Reconditioning and Earthworks amounted to £1,581, and with Administrative and General Expenses, £715, resulted in a loss for the year of £2,083.

Further reconditioning work was done on the land dredged by the Company in accordance with its guarantees and undertakings to land owners. Because of its nature, this work has taken longer to complete than was originally anticipated. The release of the Company from these obligations is a condition precedent to the winding up of the Company.

Central Victoria Dredging Co. N.L., in which the Company holds 125,000 fully paid 10/- shares, made a profit of £44,200 for the year ended March 31, 1953, compared with £48,121 for the previous period.

It is understood that the affairs of Central Victoria Dredging Co. N.L. will be reviewed at its Annual Meeting, to be held immediately after this meeting. A copy of the Chairman's statement, to be delivered at the Central Victoria Dredging meeting, will be posted to Victoria Gold Dredging Company N.L. shareholders.

Conclusion.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors, were received and adopted.

The retiring Directors, Messrs. W. D. Brookes and L. Edwards, were re-elected, and Messrs. Buckley & Hughes, Chartered Accountants (Aust.), were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The meeting then terminated.

Central Norseman Gold Corporation No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE EIGHTEENTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON WEDNESDAY, 9th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:—

Mr. W. D. Brookes was appointed to fill the vacancy on the Board.

It is my privilege to present to you the Reports and Accounts for the year ended March 31, 1953. As these documents have been circulated to members and have been in their hands for the prescribed period I propose, with your permission, to take them as read.

Income and Expenditure.

The year has been an exceptionally profitable one for the Company, resulting, as it has done, in a net profit of £617,015 being earned. This has enabled dividends totalling £325,000, or 2/6 per share, to be paid out of this year's profits. Since the close of the financial year a further dividend, No. 15, of 9d. per share plus a bonus of 9d. per share, was paid on June 30, 1953.

The year's profit has been utilised as follows:—

In dividends	£325,000
In Income Tax	2,270
In Advance Mine Development	40,888
In Increase in Fixed Assets	60,466
In Increase in Net Current Assets	188,391
	£617,015

Throughout the year Gold Producers' Association Limited continued to sell newly-mined gold in the premium markets, and dividends received and estimated to be received from this source totalled £68,441, whilst £3,071 additional, was received in respect of the previous year's production. Receipts for the year under review averaged about 17.4/- per fine ounce of gold produced. but falls in the premium market price mean that returns for the current year will be less.

The main cause of the profit increase is the substantial rise in grade of ore treated—9.4 dwts. per ton compared with 6.59 dwts. in 1951-52. The tonnage milled rose from 149,088 tons in 1951/52 to 161,444 tons. In this period 46,247 tons of ore were drawn from the Princess Royal mine and 106,557 tons from the Regent No. 4 orebody.

Mine Development.

A total of 10,304 feet of development was completed, of which 5,837 feet was on the Mararoa Vein and 3,665 feet at Princess Royal. Payable footage was 28% of the total footage on reef of the Mararoa Vein; where 1,656 feet of development averaged 10.6 dwts. over 56 inches, whilst 3,022 feet or 82% of the total footage on reef averaged 27.9 dwts. over 57 inches at Princess Royal.

From the close of the year to August 11, 781 feet of development, equal to 22% of the total footage, have been on ore averaging 14.2 dwts. over 54 inches.

Ore reserves at March 24, 1953, were estimated at 391,313 tons of an average grade of 9.0 dwts. At March 25, 1952, ore reserve estimates were 328,000 tons averaging 8.5 dwts. per ton. It was pointed out in the annual report that in calculating the reserves no close estimate could be made of the tonnage of rich ore available at Princess Royal until further evidence was obtained of extension of ore between the 5 and 6 levels.

Since the close of the financial year, a drill hole below No. 29 Level on the Mararoa Vein gave an intersection of 11.7 dwts. over a true width of 42 inches. A winze at the same co-ordinate has recently come into intermittent reef at 30 feet below the level, recent assays being variable. The drive on the No. 34 Level northwards has been on strong reef, but as yet, only low values. It is hoped that these are the first indications of a new group of oreshoots in depth and to the north of the areas now being worked from the Regent Shaft. Prospecting is still incomplete southwards below No. 29 Level.

A consequence of drawing ore from deeper levels is the increased length of development openings required to reach new ore-bearing areas. In order to have our openings out in time it is essential now to push ahead with shaft sinking. At the present time development is going on from the Nos. 29, 32 and 34 Levels at the Regent Shaft and this will be continued throughout the year to the extent that results warrant. Shaft sinking will be resumed and carried down at least to 4,000 feet inclined depth. A main northern prospecting drive will be begun at this depth and carried northwards to prospect towards the Norite Dyke, which is some 9,000 feet northwards from the Regent Shaft. If the orebodies maintain their current pitch and continue northwards it would be possible to prospect the vein by this drive and by means of crosscuts from it and drilling therefrom as far north as was necessary. The main consideration is to get this drive away as soon as possible as the development of these areas will require a number of years to accomplish.

The principal development during the year has been the extension southwards of the high-grade oreshoots located near the Royal Shaft. Nos. 5 and 6 Level drives south appear to have now passed out of this ore zone, which has a length of about 1,000 feet. There remain prospects of ore for some 2,000 feet still further south as indicated by stoping above No. 7 Level and some diamond drill intersections. No. 5 Level drive will be continued to prospect part of the vein.

Prospecting northwards at Princess Royal will also be put in hand in the near future. It appears as though we have to find a new series as Nos. 5 and 6 Level ore shoots seem to be ending about 100 feet north of the shaft. The diamond drilling programme prospecting for oreshoots in veins other than those now being worked will be continued.

Winders and Power Supply.

Since the close of the year the new winder for the Regent Shaft has arrived at Norseman and has been erected. This will have a capacity to haul from 5,000 feet inclined depth.

The winder and head frame from the Phoenix shaft have now been transferred to, and re-erected, together with shaft bins, at the Royal Shaft, which is now equipped to the No. 8 Level. Both the Regent and Royal Shafts now have their permanent winding equipment erected.

As the mines get deeper there is a steady increase in power requirements. During the year one alternator was seriously damaged and will not be useable until new parts are available in some 18 months' time. In the meantime, the power requirements leave too small an amount of stand-by equipment for efficient operation of the Power House. We have, therefore, purchased a new 750 kw diesel generator set which is on its way to Australia.

Conclusion.

Finally, I desire to record the Board's appreciation of the services that have been rendered during the year by the Technical and Administrative staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors and Auditors, were received and adopted.

The retiring Directors, Messrs. W. D. Brookes and M. A. P. Mawby, were re-elected, and Messrs. Cook, Tomlins and Miram, Chartered Accountants (Aust.), were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

Central Victoria Dredging Company No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE SIXTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON TUESDAY, 8th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said—

I have the honour to present to shareholders, on behalf of the Board and Management, the Reports and Accounts for the year ended 31st March, 1953. As these have been distributed to members I intend, with your permission, to take them as read.

Net profit for the year was £44,200 compared with £48,121 for the year ended 31st March, 1952. The operating profit from which this result was derived amounts to £53,595 of which Jim Crow's proportion was £52,614 and Amphitheatre's £981.

Mining Operations—Jim Crow & Amphitheatre Dredges

Since the formation of the Company, due to the rising price level, an additional £140,000 has been required for capital expenditure on dredges, plant and stores. Over the same period rising costs have also curtailed profits, their net effect, at the present time, being shown by the following figures. Had our current operating performances been carried out under the economic conditions of 1947 the overall operating expenditure, including provisions for redemption of land, earthworks, head office, etc., would have been £2,500 per four-weekly period for the Jim Crow Dredge as compared with current operating expenditure of £5,700 per four-weekly period.

Comparable figures for the Amphitheatre Dredge are, in 194 £2,800 per four-weekly period as compared with current operatin expenditure of £6,400 per four-weekly period. The cost of operatin the two dredges is therefore £12,100 per four-weekly period compared with £5,300 for similar performances in 1947. This h more than offset the increased price of gold since, today, it r quires about 750 ozs. to meet the four-weekly expenditure as con pared with about 490 ozs. in 1947.

The average grade recovered at the Jim Crow property to da has been 2.16 grains per cubic yard as compared with 2.56 grai per cubic yard as bored. This is equivalent to a recovery of 84 as compared with 85% in the initial estimates. These figures ha until recently, shown a higher percentage recovery which h been reduced by the low grade from the terraces dredged in rece months.

At Amphitheatre the grade recovered to date, excluding son 200,000 cubic yards dredged before the dredge reached bottom, w 2.15 grains per cubic yard as compared with 2.04 grains per cub yard as bored, or a recovery of 105% as compared with the est mate of 85%. This is believed to be due to coarse gold being r covered by the dredge which was not seen in the boring. Durin the testing period sluicing from old sluicing paddocks and shaf had shown coarse gold and it had been expected that this wou have some effect in increasing the percentage recovery.

The yardage dredged to date, just under 2,000,000 cubic yard is rather too low for this figure to be considered conclusive.

The effect of rising costs has been to bring the marginal gra to approximately 1.6 grains per cubic yard on the Jim Crow proper

The dredge, which has been passing across terraces, is now coming into flats from which we hope to have fair recoveries and good dredging conditions for rather less than a year ahead. After that, the remainder of the Jim Crow property, under current conditions, is marginal. This dredge was specially designed to be easily removable to other areas. At the Guildford property 6,000,000 cubic yards has been selected showing an average gold content of 2.25 grains per cubic yard as bored. On the expectation that about 75% of this grade will be recovered the average yield would be 1.9 grains per cubic yard. There are also good prospects of increasing the area of payable ground. The dredging conditions on this property are similar to those on the leases worked further downstream by Victoria Gold Dredging Company N.L. The dredging rate should therefore be at least equal to that obtained during the first two operating years on the Jim Crow property with consequent favourable effect on costs. The estimated cost of moving the dredge on to the Guildford area is £36,000. It is proposed to complete dredging the flat now being entered by the Jim Crow dredge. The future course will then be decided in the light of economic circumstances at that time.

At the Amphitheatre property increased power has been installed on the bucket line and the clay extractor has been re-designed. Due to rather easier ground and to the above and other changes, improved performances are being obtained. The extractor is operating satisfactorily and the lower gravels are disintegrating without difficulty in the screens. The effect of the rising cost level has been to increase the marginal grade which, at current operating performances, would have been 1.2 grains in 1947 to 1.9 grains today. The property has therefore been re-examined to see whether a revised dredging course could be laid out to permit dredging of the higher grade sections of the property earlier without preventing a return to the lower grade areas later should economic conditions for gold mining improve.

By re-arranging the course it will be possible to dredge for six years ahead in ground showing an average grade, as bored, of 2.9 grains per cubic yard. We hope the effect of the coarse gold referred to earlier will be maintained but it should be emphasised that the yardage dredged to date is not sufficient to be certain of this factor. Following this period there would be approximately five years of dredging which would be of marginal grade today. When the time comes the dredging of all or part of this ground will depend on the then economic conditions. The above areas are within those originally included in the selected area. Beyond this, extending upstream for about three miles is a large area of old diggings which on evidence of partial testing carried out some time ago would appear to have possibilities for profitable dredging. If costs, at that time, then permitted this would provide an additional five to ten years' work for the dredge. In addition, at the downstream end of the property there is a partially tested area which also may be profitably dredged in the future. There is, therefore, a long life ahead of this dredge if economic conditions permit of profitable operations.

Conclusion

In conclusion I wish to record the directors' appreciation of the services rendered by the Technical and Administrative staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Director, Mr. Frank F. Espie, was re-elected and Messrs. E. Lithgow and Company, Chartered Accountants (Aust.) were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The Meeting then terminated.

Gold Mines of Kalgoorlie (Aust.) Limited

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE SECOND ANNUAL ORDINARY GENERAL MEETING OF STOCKHOLDERS, HELD ON WEDNESDAY, 9th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said—

It is my privilege to present to you, on behalf of the Board and Management, the Reports and Accounts for the year ended 31st March, 1953. These have all been circulated to members and I shall, with your permission, take them as read.

Accounts

The balance to the credit of Appropriation Accounts at 31st March, 1952 was £40,067, which, after crediting Net Profit of £164,319, made a total of £204,386. Loss on Realisation of Equipment, £5,639 was debited to this account together with £96,055 for Dividends Nos. 2 and 3 of 9d. and 6d. per stock unit respectively, leaving a balance of £102,692 to be carried forward. Dividend No. 2 was paid on 10th October, 1952 and Dividend No. 3 declared on 23rd March, 1953 was paid on 9th May, 1953.

Capital Expenditure in 1952-53 was high at £108,414. The main item was £85,000 spent in acquiring the Paringa leases, plant and stores; other plant and advance development requiring £18,414 and calls on shares in Kalgoorlie Southern Gold Mines N.L., £5,000. This capital expenditure was financed by £62,625 from Undistributed Profits and the balance by £45,789 reduction in Net Current Assets.

Particulars of tonnage and grade are given in the Annual Report and need no special amplification.

Average working costs at 72.23/- per ton were 6.99/- per ton higher than for 1951-52, and more than offset the additional revenue received from the rise in grade, working profit per ton having declined from 22.82/- in 1951-52 to 20.67/- in the year under review. Gross Profit is therefore £15,478 lower at £178,656 and Net Profit, which was £180,616 in 1951-52 was £164,319 for year under review.

Gold Producers' Association Limited sold gold relating to the full year's production and actual and estimated receipts from this source are included in the accounts at £42,255, equivalent to 17.3/- per fine ounce of gold produced. Additional gold premium receipts in respect of 1951-52 production amounted to £2,600 and have also been brought to account. The premiums received for gold sold on the free market have declined in recent months.

Development

Development for the year totalled 9,142 feet of which 2,990 feet or 32.7% of the total footage was in ore averaging 9.2 dwts. over 8 inches. These results are reflected in the ore reserves which were estimated at 579,000 tons averaging 6.5 dwts. per ton compared with 486,000 tons averaging 6.3 dwts. at 25th March, 1952.

Favourable developments have continued since the close of the year. Of 2466 feet of development completed 713 feet, or 29% was in ore averaging 11.5 dwts. over 65 inches. There has been a further reduction in costs since the end of the financial year amounting to a little over 1/6d. per ton. Increased throughput is the main contributing factor.

Plans have been included with the Annual Report which show the leases now held by the Company, which, of course, include the Paringa leases. The output comes from a great number of small orebodies being mined at varying depths between surface and 1,500 feet. It is only possible to show the main ore producers. Amongst the plans is a cross section of the Brownhill Syncline, showing the relationship of the lodes to the contact between the quartz dolerite and the calc schist.

The most important event during the year was the acquisition of the Paringa leases. The orebodies in the Paringa leases can be worked much more economically as part of Gold Mines of Kalgoorlie than they could be by the Paringa Company operating alone. In consequence, we expect that substantial tonnages from known lodes will be profitable for this Company to mine. In addition, these leases bring under the control of Gold Mines of Kalgoorlie (Aust.) Limited most of the north-easterly extensions of the productive part of the Kalgoorlie field.

A second drill hole to test the Second Quartz Dolerite horizon was drilled from the bottom of the New North Boulder shaft, approximately 2,000 feet vertically above the previous intersection, which was on the same co-ordinate. The hole was designed to test whether the lower Quartz Dolerite comes close enough to the surface to be within reach of the existing New North Boulder workings. As was thought likely, this drilling showed that this is not so. Other holes will be drilled, as convenient, to make further tests of the lower Quartz Dolerite.

Our geological section has had continuously in hand the analysis of the conditions under which ore occurs in Kalgoorlie. Marked progress has been made over the last year. One of the features which has emerged is that the vicinity of the contact between the quartz dolerite and the calc schist in the Brownhill Syncline, and particularly along the eastern flank, is potentially a larger source of ore than had previously been thought.

The programme for opening up and prospecting this interesting area, which extends for a length from 3,000 to 4,000 ft. is now being examined. It seems probable that one of the Paringa shafts will be re-equipped and will gradually become the main haulage shaft for the northern part of the property.

In consequence of the added ore potential the output has been increased to 15,000 tons per four-weekly period, which is well within the capacity of the plant.

General

It has been found possible to increase the capacity of the mill at small cost by converting one of the ball mills to a rod mill and increasing the speed of the filters. During the year the circuit was changed from pre-cyanidation of the ore before flotation to post-cyanidation of the flotation tailings. This, together with the above alterations, resulted in a fall in costs of 1.5/- per ton.

Power demands have grown in consequence of the extra tonnage and a 480 kw. diesel generator set is now being installed in the power house.

The final call by Kalgoorlie Southern Gold Mines N.L. of 1/- per share was made payable on 8th July. All shares, amounting to 170,000 shares, held in Kalgoorlie Southern Gold Mines N.L. are now fully paid. A full account of progress in this interesting major prospect is given in the Annual Report with accompanying plan, of that Company. It is considered that results to date fully justify continuance of the project.

I have pleasure in announcing that the Board, just prior to this Meeting, declared a dividend of 9d. per unit of Stock payable on 6th November, 1953.

Conclusion

I desire, finally, to record on behalf of yourselves and the Directors our appreciation of the services rendered by the Technical and Administrative Staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Directors, Messrs. W. D. Brookes and J. P. Fitzgerald were re-elected and Mr. Gordon L. Allard, Chartered Accountant (Aust.) of the firm of Price Waterhouse and Company, was re-appointed Auditor of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The Meeting then terminated.

Great Western Consolidated No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE FIFTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON THURSDAY, 10th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G. said—

Mr. W. D. Brookes was appointed to fill the vacancy on the Board. During the year Mr. J. Chester Guest also accepted a seat on the Board of the Company.

On behalf of the Board and Management I submit for your approval the Reports and Accounts for the year ended 31st March, 1953. These have been sent to Members and with your permission I propose to take them as read.

The financial position at 31st March, 1953, may be expressed as follows:—

Expenditure on Mine Property, Plant & Equipment and Preparatory work amounted to	£1,949,854
On Housing	319,442
On Stores, Ore Stocks and Sundries	228,801
A total of	£2,498,097
To which should be added the debit balance of Profit and Loss Account	11,800
Giving a grand total of	£2,509,897
Issued and Paid Up capital totals	1,768,000
The long term Housing Loan financed by the Company's Bankers amounts to	315,000
Which leaves an excess of expenditure of	£426,897

and has been financed by the Bank overdraft and advances from Western Mining Corporation Limited.

You will recall that arrangements for a long term loan to cover housing expenditure had been made prior to the share issue.

Capital Expenditure

At the last Annual Meeting it was stated that the Bank had agreed to finance additional capital expenditure, the advance having been guaranteed by Western Mining Corporation Limited in consideration of an option to purchase 300,000 shares at par for a period of five years. For reasons to which I will refer in a few minutes, it seemed necessary to expedite the development programme for which extra funds are needed. The Bank has agreed to provide the additional finance subject to guarantee by Western Mining Corporation Limited. In return for the guarantee a new share option has been granted to Western Mining Corporation Limited to subscribe for up to 500,000 10/- shares at 8/- each, which price was slightly above the current Stock Exchange quotation at the date that the option was granted. This option runs to 25th May, 1958 and replaces the previous option.

The Company has become a member of Gold Producers' Association Limited and gold premiums estimated to be receivable in respect of production to 24th March, 1953, averaged 16.4/- per ounce of fine gold; currently the premium offered for gold on the "free market" is lower than during the period under review.

Review of Operations

It is appropriate, on this occasion, to review the expectations of the Company when formed and its position today.

The Company was formed to develop a number or orebodies along the western flank of the anticline running from Southern Cross some twenty-three miles northwards through Bullfinch. The orebodies are located in drag folds in two types of beds, greenstone tuffs and slate respectively. The oreshoots follow the pitch of the folding and reflect the form and extent of the folded structure. The folds vary greatly in intensity being strong at one horizon, weakening or perhaps fading out at a lower horizon to form again strongly at still greater depths, and so on. It was expected that this habit would be a feature of the district and would be reflected in the form of the orebodies. The orebodies therefore would wax and wane going down the folds and gaps, from time to time, might be met in the mineralisation.

Initial prospecting was done on the Copperhead property where the upper part of the orebodies could be mined by open-cut methods. This deposit was the one most easily prospected and the one on which the great bulk of the early prospecting work was done.

The open-cut was important in the project as a whole as it enabled a large output to be achieved with much less work and cost and in a shorter time than if the mines had had to be prepared for the full output from underground alone.

With this background, equipment of the property was begun early in 1950. The plant started operating in November, 1952, below capacity and prior to the arrival of some units of the plant. When these had been installed the plant capacity was found to be quite up to expectations and the general operation and metallurgical performance have been at least equal to the estimates.

In the mines, as compared with the initial expectations, we have been faced with lower grade ore from the northern block of the southern open-cuts. It would be quite consistent with the data for some blocks to come out better and others worse than expected. At this stage we cannot indicate whether the estimate of grade will, in the final count, be fully realised.

The underground work has been mainly done on the Northern Series and grade and tonnage are close to expectations, except that it now seems probable that we are running into a gap in the mineralisation, beginning immediately above the No. 8 Level, though the level is not yet fully developed. At the eastern end width and grade so far disclosed are at least up to mine average.

Development, until recently, has been almost entirely within the ore reserve boundaries but driving on the Southern Series is now in progress. It has not advanced sufficiently far to indicate whether we will meet with a similar interruption in the Southern Series to that appearing to begin on the Northern.

The orebodies are extremely tightly folded. Individual lenses make and die very rapidly. Development which, for mining reasons, is in the footwall of the orebodies, gives very little indication of the value of the oreshoots until they are subsequently drilled prior to putting in crosscuts for the mechanical loaders. In consequence, it is impossible to give any adequate description of the oreshoots until drilling is well advanced. This is the reason for the lack of information which otherwise would have been covered in Monthly Reports.

Over the last three four weekly periods the average operating surplus per period—the excess of the value of production over the cost of mining, treatment and administration—has amounted to £7,297 after deduction of a development charge of 7/- per ton of underground ore treated. Interest charges on the loans, less the rents received, have cost £2,465 per period and reduced the net profit to £4,832 per period.

Taking into account the rises in the basic wage which have taken place, operating costs have been very satisfactory.

The average costs per ton over the last three periods have been mining 16.7/-, milling 15.9/-, total, including development and administration, 36.3/- per ton.

At the date of the Prospectus, the minimum wage on the goldfields was £9/5/5 per week. It had risen to £14/6/8 per week by the time the property came into production and has since increased to £14/11/10. In consequence of this rise and the parallel increases in the prices of equipment and in construction costs instead of some residue for working capital remaining, an overrun of expenditure of approximately £330,000 had been incurred by the time the plant came into full production. Likewise, the current working costs are substantially higher. The effect of this factor has been to reduce our estimated profit by £20,000 per four weekly period while revenue has been further reduced by the lower grade ore so far mined from the open cuts. Had it not been for the gap beginning on No. 8 Level, output could have been increased from underground and most, if not all, of the lack of revenue from the open cuts could have been, by now, overcome. It was always thought that the mineralisation would be intermittent and that we would encounter gaps in the mineralisation which we would have to cross. This was not more than expected but to have encountered one of these gaps so early in our operations is unfortunate.

We have therefore, to expedite our prospecting and development in order to provide additional sources of ore. We are now developing the Nos. 6 and 8 Levels on the Southern Series and have made preparations to resume shaft sinking within the next month. The intention is to sink the shaft a lift of 800 ft. which will open up four additional levels. We are operating a large crusher underground and to do this economically ore is passed to the crusher from a number of levels. The crusher will, in due course, be moved from its present position below the No. 8 Level down to below the No. 16 Level. The crusher is a significant factor in our costs and enables large rocks to be handled mechanically. Prospecting has also been begun at other mines.

We have already the greater part of the equipment needed for bringing two additional mines into production, which include a transmission line initially as far as the Pilot property.

A siding to the mill has been completed from the railway line which runs northwards from Southern Cross along the line of the deposits through Bullfinch. Short sidings only are needed to enable trucks to be loaded at these mines for rail to the mill.

Through the efforts, which were much appreciated, of the Water Supply Department of Western Australia the old pipeline from Southern Cross to Bullfinch has been completely reconstructed and water was available in time for the commencement of operations.

Notwithstanding the initial setbacks experienced to date shareholders should recognise the fine performance of the staff and employees in carrying through the erection of plant and development of the mine in the time and at the cost, considering the very difficult circumstances under which the work was carried through.

The net result of all these happenings is that we have a high efficient low cost operation at Copperhead.

Notwithstanding the rise in the basic rate working costs should leave a substantial margin of profit over the average grade of ore which we may expect to mine, provided economic conditions do not continue to move further against gold. Our prospecting and development is being pushed ahead as far as possible to make more sources of ore available to the mill.

Despite the various occurrences enumerated above, we do not think the outlook for the project, which ultimately depends on the ore potential of the Southern Cross district, has been impaired. The future of the property depends on the rate at which we can bring into production other sources of ore to improve our return.

Conclusion

The Balance Sheet as at March 31st, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Directors, Messrs. W. D. Brookes, J. Chester Guest and J. Stanley Murray were re-elected and Messrs. Buckley Hughes, Chartered Accountants (Aust.) were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The Meeting then terminated.

Morning Star (G.M.A.) Mines No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE NINETEENTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON MONDAY, 7th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Green, K.C.M.G., said:—

The Reports and Accounts for the financial year ended March 31, 1953, are submitted for your consideration. Copies of these documents have been circulated to members and I therefore propose to take them as read.

In the period covered by the accounts the Mine treated 19,606 tons of ore for a yield of 16,009 ounces of fine gold—an average of 16.33 dwts. per ton. This yield includes 461 fine ounces of gold which are estimated to be recoverable from 231 tons of concentrates that have been stacked at the Mine for treatment at a later date.

Mining Operations.

During the year 1,609 feet of development was carried out of which 1,358 feet was on reef: 520 feet or 38% of the total development on reef was payable and averaged 24.6 dwts. over 72 inches. These development results are reflected in the ore reserves which, at the end of the financial year, were estimated to be 50,500 tons, averaging 15.5 dwts. per ton. At the end of the previous year ore reserves were estimated at 51,000 tons, averaging 12.5 dwts.

The total income on Working Account was £259,414, comprised of £245,745 value of bullion and concentrates after deducting realisation charges, and £13,669 gold premiums, of which £608 was additional receipts received on the previous year's production. Working costs totalled £145,252 and left a gross profit to be transferred to Profit and Loss Account of £114,162. Directors' and Audit fees and Administration and General Expenses took £5,766, and after allowing for income received from Commonwealth Securities £920, left a net profit of £109,316, as compared with £35,760 last year. The way in which these funds have been used is set out clearly on page 6 in the Annual Report.

The average cost per ton of mining, milling and development was 147.1/- compared with 123.8/- for the previous year. This increase of 19% is due primarily to higher costs of both labour and stores.

Mine Development.

Since the date of the Annual Report most of the development work done at the mine has been of an exploratory nature directed to finding additional orebodies in the reef system now being worked.

The South Drive on the No. 19 Level of Stirling Floor has been extended 72 feet to 642 feet south of the crosscut on quartz stringers of marginal grade. Indications are that the orebody is continuing to the south, but—as was to be expected—will be of lower grade than the very rich section around the 375N winze. A north drive on the same level was commenced and will be continued for some distance. The reef is very strong but is low grade opposite the shaft. Diamond drill holes put down to the north were low grade except one at 400 feet north of the present face which assayed 8.2 dwts. over 18 inches. The drilling is not conclusive and further testing by driving and rising is warranted.

It was reported last year that two drill holes into the south end of Achilles Floor had intersected quartz at 200 feet south of the stoped-out area. The south drive on the No. 16 Level was therefore extended to a position under these holes and a rise is now in progress to test the area.

The north drive on No. 16 Level is being continued, although this development is on shear only. On the upper levels of the mine, orebodies were found for some distance north of the location reached on the No. 16 Level, so it is thought to be essential to test the mine to the north at this horizon.

The development of Atlas Floor is being continued. Results to date in this area have been satisfactory and substantially more ore has been found than was originally expected.

The high-grade stopes on the No. 19 Level of Stirling Floor have been responsible for the increase of grade during the last six months. There is still sufficient ore in these stopes to maintain the grade at about the present level for some time.

As has been mentioned previously, the future of the mine depends on development in depth. Shaft sinking was commenced in May to carry out the programme of development set out in the drawing circulated with the 1952 report. However, after sinking 50 feet to 70 feet below No. 19 Level the shaft entered vertically bedded black slates which were severely crushed and broken and impregnated with water. As shaft sinking proceeded the ground became worse and sinking was only possible by using the fore-poling method—devised for sinking in running ground.

A geological examination was made and from surface outcrops of similar black slate it appeared likely that the condition encountered in the shaft would continue for some 300 feet. Sinking in bad ground is slow and expensive, and in addition, the cost of maintaining a shaft in this type of country is likely to be high. It is sound mining practice to avoid sinking a shaft in bad ground if there is a practicable alternative, and fortunately there is one at the Morning Star mine.

New Inclined Shaft.

It was decided to discontinue the main shaft—which had reached a depth of 77 feet only below No. 19 Level—and to make preparations for sinking an inclined internal shaft down the centre of the dyke. This will be begun from No. 19 Level at about 100 feet north of the main crosscut and will, in effect, follow the course of D.D.H. No. 102, which was drilled in diorite for 1,600 feet.

It has always been recognised that, at some stage, an internal shaft would be necessary to work the mine at depth, though the main shaft would, of course, be continued as long as was economic. Still, the increased operating costs, due to an internal shaft, would not compare with the expense of sinking and maintaining a deep shaft in running ground.

There are, in addition, some points in favour of the new shaft. It will be sunk in diorite which is better country for shaft sinking and may be expected to make less water than the slates. The shaft will be in the centre of the dyke and will provide a large exploration opening. Crosscuts to the reef at the various levels will be short and the saving in capital expenditure on crosscuts will be a substantial set-off against the cost of purchasing and installing the winder and other equipment required. It may well be that overall this development may prove not to have been unfavourable.

The connection to the S.E.C. power line will permit the installation of a second winder without additional power equipment which otherwise would have been a very big item of extra expenditure.

Designs for the new layout are in hand and it is expected that shaft sinking will commence within two months. The electric sinking winch on the mine is capable of hoisting from 500 feet and it is hoped that, by the time the shaft is down 500 feet and the necessary plats are cut, the new winder will be available.

Connection of S.E.C. Power.

The erection of the power line from Mansfield to Woods Point has been completed under the supervision of our Consultants, Gold Mines of Australia Limited. Work commenced from the Woods Point end on January 2 and the 51 miles of transmission line was completed by June 26. The erection of sub-stations at Jamieson, A.1 and Morning Star was completed by the middle of August and the State Electricity Commission, after completing the necessary tests, made power available to the mine on September 3.

The low-tension distribution mains and electric compressors were installed while the line was being constructed and within thirty minutes of the State Electricity Commission power being made available at the mine all machinery on the mine, except the winder, was operating on the State Electricity Commission supply, and the use of diesel power was discontinued. I think you will agree that our thanks are due to our Consultants and to all concerned in carrying out the work in such an expeditious manner.

The suppliers of the equipment required to convert the winder from steam to electric drive advise that this will be available by October 30. It will, of course, be necessary to cease mining during this changeover, but, as the battery bins will be filled before mining ceases and work on the installation will be continuous through the weekends, it is expected that the changeover can be made in one working week and the loss of production will not be of great importance.

When this work is completed the use of steam on the mine will be discontinued, and the full effect of the saving in cost—about 33/- per ton—will take effect.

Prospecting.

Next summer, geological examination and testing of the outside lease applications held by the Company in the district will be commenced. The history of the district is that, in those deposits which have been prospected at depth, payable mineralisation continued. For various reasons a number of the mines were not worked below adit level.

With the completion of the transmission line making S.E.C. power available, working costs would be appreciably less than otherwise. The capital cost of equipment of a new mine would likewise be much reduced. It is clear, therefore, the company could begin development of a smaller or lower grade deposit than if power were not available. In most districts the number of deposits which can be profitably worked increases as the grade requirements fall. Accordingly, the chances of finding a profitable mine are enhanced and with them the continuance of mining operations in and around Woods Point.

Dividend.

Current rate of profits continues to be satisfactory but until it is known what refund the Company is going to receive, and when, for the recoverable value of the transmission line from the State Electricity Commission, and we have further information as to cost of the additional equipment needed for the new internal shaft, your Directors think it prudent to conserve the funds of the Company, and accordingly have decided this time to pay a dividend of 6d. per share, payable on October 16.

Staff.

During the year Mine Superintendent (Mr. P. E. Clarke) resigned to take up another appointment, and Mr. J. V. Lake was appointed Mine Superintendent with Mr. W. M. Sharpe as Assistant Superintendent. On behalf of the Board I have to express my appreciation of the services of these gentlemen and the staff and other employees, both of this Company and of our General Managers and Consultants.

Conclusion.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors and Auditors, were received and adopted.

The retiring Director, Mr. Gerald H. Robinson, was re-elected and Messrs. Buckley and Hughes, Chartered Accountants (Aust.), were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

New Coolgardie Gold Mines No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE SIXTH ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON THURSDAY, 10th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:—

On behalf of the Board and Management I present to you the Reports and Accounts for the financial year ended March 31, 1953. These have been circulated to members and, with your permission, I shall take them as read.

Net Profit for the year was £140,580. At the commencement of this period the Company owed:—

Its Bankers	£57,838
and Western Mining Corporation ..	127,500
a total of	£185,338

Of the Net Profits earned, £118,338 was applied toward reduction of these debts, and at the close of the period the bank overdraft had been eliminated and the Western Mining Corporation Limited loan reduced to £67,000. In addition to the above £13,811 was spent on items of a capital nature and £8,100 on increases in current assets and reduction of current liabilities.

The option held by Hampton Gold Mines No Liability to subscribe for 50,000 shares in the capital of the Company at a premium of 5/- per share expired on July 8, 1953, but was extended a further month. The option has now expired.

New Issue of Shares.

In a circular sent out to members with the Annual Report, members were given preliminary details of a new issue of 170,400 10/- shares, and the Register of members will be closed after business tomorrow, September 11, 1953, to determine entitlements to the issue. These shares will be offered to members at par, in the proportion of one new issue for each five shares held. One shilling will be payable on acceptance and the balance in two calls of 4/- and 5/- in November, 1953, and January, 1954, respectively. Letters of Offer will be despatched to members within the next fortnight, and will contain full details of the terms and conditions of the offer. This issue will raise £85,200 and will be used firstly, to extinguish the Western Mining Corporation Limited loan, and secondly, to provide working capital. More than most, this Company's life depends on an active prospecting policy for which there is ample scope and which the issue will enable us to continue. If prospecting should be really successful some increase in output may be justified, though this issue does not make any provision for it.

The Company paid its first dividend of 6d. per share, requiring £21,300 on July 14, 1953.

Mining Operations.

In the year under review the Company's mill treated 65,029 tons of ore, 11,873 tons more than 1951-52. Grade of ore treated at 10.75 dwts. per ton compares with 9.88 dwts. for the previous year. These factors, together with the gold premiums received and receivable by this Company—which are estimated to average 17.2/- per fine ounce of gold on the full year's production—having combined to lift working revenue per ton to 176.84/-, 18.57/- better than the corresponding figure for 1951-52. Working costs at 131.83/- per ton include 24/- for development redemption and are slightly lower than the 1951-52 figure of 133.58/-. This decrease in total working costs is mainly due to the increase in tonnage milled, but it has been achieved in the face of the marked rise in the price level.

The total of 6,162 feet of development was completed during the year, 4,947 feet of which was at Hampton, where 1,421 feet was proved in ore averaging 13.6 dwts. over 45 inches—this payable footage was 36% of the total footage on shear. At Callion, where development totalled 1,215 feet, 79% of the footage on shear was payable, 805 feet averaging 19.7 dwts. over 54 inches. Since the close of the year 462 feet of development on ore at Hampton has averaged 11.4 dwts. over 40 inches and 459 feet at Callion, 8.3 dwts. over 61 inches.

Ore reserves at March 24, 1953, are calculated at 117,800 tons with an average grade of 12.3 dwts. Comparable figures in March, 1952, were 117,300 tons, grade 13.1 dwts.

During the year just ended the Barbara Mine has been opened up on the No. 5 Level with very satisfactory results on the northern and No. 11 lodes where some 584 feet of ore have been developed averaging 11.9 dwts. over 51 inches. Ore is continuing in both east and west faces of the northern lodes. The southern lode is much smaller than on the No. 4 Level above. This change is believed to be associated with a marked alteration at this level in the shape of the porphyry contact which will be again prospected in depth. As noted above, winzes below No. 5 Level are showing ore continuing in depth. The shaft is now down to the No. 6 Level, the plat completed and crosscuts are in progress to the lodes. At the Surprise Mine marginal values have been intersected in drill holes and a drive on No. 4 Level has exposed 138 feet of lode assaying 4.1 dwts. over 41 inches. The question of continuing deeper exploration at this position is now being considered. At Callion, driving on No. 4 Level has disclosed ore aggregating a length of 435 feet at 8.1 dwts. per ton over 62 inches in a total length driven of 577 feet. Several surface diamond drill holes, put down during the early testing of the Callion mine, had given poor results at positions 50 to 100 feet below No. 3 Level, but the work on No. 4 Level gives hope that the orebody will be more extensive than was thought originally.

During the year the leases covering the old Bayleys Mine were secured. Examination of the leases has begun and it is hoped that this study will indicate positions which are worth testing. A decision should be reached in the course of the next two or three months.

The various lode types differ considerably in their characteristics, which result in differing mining costs. The actinolite lodes on the Barbara and Surprise properties involve high mining cost since the ground is soft and must be closely filled. The porphyry lodes at Surprise, the Callion orebody and the Bayleys type of ore are all in hard rock which can be mined by shrinkage at a cost about 4 dwts. less than that of the actinolite oreshoots. Any development at Bayleys have the advantage that they are located in the immediate vicinity of mill and power house and accordingly no road transport charges have to be made.

The mill is operating satisfactorily and is now up to capacity.

Conclusion.

I desire, in conclusion, to record the Directors' warm appreciation of the services rendered by both the Technical and Administrative staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Director, Mr. J. Stanley Murray, was re-elected and Mr. Geoffrey Thompson Moore, Chartered Accountant (Aust.) was re-appointed Auditor of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The meeting then terminated.

Kalgoorlie Southern Gold Mines No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE THIRD ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON WEDNESDAY, 9th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:—

I present for your approval the Reports and Accounts for the financial year to March 31, 1953. As these documents have been in members' hands for some time I propose to take them as read.

The accounts do not call for much comment. Diamond Drilling, Geological Work, Lease Rents, etc., totalled £30,383, which was transferred to Mine Property and Development Account, and General Expenses, Directors' and Audit Fees and Taxation, less Income from Investments, amounted to £1,545, which was transferred to the same account. During the year, Call No. 3 of 1/- per share, making the 620,900 Contributing shares in the capital of the Company paid to 4/-, was made and brought the total paid-up capital of the Company to £154,180. As you are aware the final Call, No. 4, of 1/- per share, was made due and payable on July 8, 1953, and the issued capital of the Company is now fully paid at £185,225.

The Report of the General Managers and Consultants, Western Mining Corporation Limited, which was included with the Annual Report, contained a detailed description of the geology of the Company's area based on an analysis of the results obtained from the drill holes so far completed. I would particularly refer shareholders to the plans accompanying this report as illustrating, in a way that the quarterly reports cannot do, the progress being made in the venture.

Since the date of the report Hole S.E.4 has been advanced to 5,600 feet. The log of the core shows sheared and carbonate quartz dolerite greenstone with narrow quartz carbonated shears still continuing.

The funds in hand amount to approximately £31,000, which will be sufficient for an additional hole after the present one is completed and most of the cost of a second hole. As was stated in the report, prospects fully justify continuing the test. The funds now available will not be sufficient to drill both the extension of the Kalgoorlie Syncline as well as the Cavalier Syncline. In due course a proposal to raise further money to continue drilling will be placed before shareholders.

On your behalf I take this opportunity of acknowledging the fine work of the Western Mining Corporation Limited Technical Staff and of the drill crews.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors, were received and adopted.

The retiring Director, Sir Samuel Burston, K.B.E., C.B., D.S.O., V.D., F.R.C.P., was re-elected and Messrs. Price, Waterhouse and Company were re-appointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The meeting then terminated.

Mount Coolon Gold Mines No Liability

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE TWENTY-FIRST ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON MONDAY, 7th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:

Submitted for your approval are the Reports and Accounts for the year ended December 31, 1952. These documents have been distributed to all members, and I therefore propose to take them as read.

A net loss of £523 was incurred in the year under review, administrative and general expenses having amounted to £629, against which was offset net income from Commonwealth Securities, £106. At balance date the amount in hand from tax free sources was £3,749, representing undistributed income received as gold mining dividends.

Morning Star (G.M.A.) Mines N.L.

The Company's main source of income is dividends from Morning Star (G.M.A.) Mines N.L., in which it holds 102,100 fully paid shares, and the loss referred to above was incurred because Morning Star (G.M.A.) Mines N.L. paid no dividends during the Mount Coolon Company's last financial year. This was due to two factors:—

Firstly, the low grade of ore that was being mined in the early portion of this period, and

secondly, the need for that company to accumulate funds to finance the large capital programme which included paying the major part of the cost of the high-tension electric transmission line which has been erected to carry State Electricity Commission power to the mine, and the cost of conversion of existing plant to electric drive.

At this time last year, the then Chairman referred to the promising developments reported by the Morning Star Company, and expressed the hope that they would permit Morning Star to return to the dividend list earlier than otherwise. This hope has been realised and, as most members will be aware, Morning Star has declared two dividends, each of 1/- per share on 23rd February and 25th May, 1953. This Company has received its share of these dividends, amounting to £10,210, and on the receipt of the next dividend from Morning Star will have sufficient funds in hand to permit payment of a dividend of 6d. per share.

Development at the Morning Star mine continues to be satisfactory and connection to the State Electricity Commission mains, which has just been made, will enable the mine to reduce its working costs substantially.

Great Western Consolidated N.L.

At the last Annual Meeting the late Chairman announced the acquisition by the Company of 35,300 fully paid 10/- shares in Great Western Consolidated No Liability for an average cost of 7/7 per share. This company completed its plant construction programme in October, 1952, and is now treating ore at a rate of 30,000 tons per four-weekly period. Equipment of its property during a period of inflation involved Great Western Consolidated in an overrun of capital expenditure in excess of paid up capital and additional funds have been needed to expedite development. It is understood that a resume of this Company's affairs will be given at the Annual Meeting due on September 10 next.

Conclusion.

The Balance Sheet as at December 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Director, Mr. G. Lindesay Clark, was re-elected and Messrs. A. Capper Moore & Sons, Chartered Accountants (Aust.) were reappointed Auditors of the Company until the next Annual Meeting at a remuneration to be fixed by the Directors.

The meeting then terminated.

Gold Mines of Australia Limited

Registered Office: 360 Collins Street, Melbourne.

REPORT OF PROCEEDINGS AT THE TWENTY-THIRD ANNUAL ORDINARY GENERAL MEETING OF SHAREHOLDERS, HELD ON TUESDAY, 8th SEPTEMBER, 1953, AT THE REGISTERED OFFICE OF THE COMPANY.

The Chairman, Mr. G. Lindesay Clark, after referring with regret to the loss of the late Chairman of Directors, Sir Walter Massy-Greene, K.C.M.G., said:—

It is my privilege to present, on behalf of the Board, the Reports and Accounts for the year ended March 31, 1953. As these documents have been distributed to members I shall, with your permission, take them as read.

Net profit for the year was £2,948, in the main derived from General Managers' and Consultants' fees. Net current assets, at balance date, amounted to £5,556. Other assets, at book value, totalled £76,611, and comprised shares in other companies, £32,522. Freehold Property, Plant and Office Equipment and Patent Rights, £10,528, and Mining Properties under Investigation, at cost, £33,561.

No change occurred in the number of shares held in other companies. Atlas Gold Mines No Liability has gone into liquidation since the close of the financial year and has declared a first and final distribution of 1.75d., and the company received its amount, £647/10/-, on June 8, 1953.

The Company continues to act as General Managers and Consultants to—

Central Victoria Dredging Company N.L.
Morning Star (G.M.A.) Mines N.L.
Mount Coolon Gold Mines N.L.
Victoria Gold Dredging Company N.L.

Prospecting.

Economic conditions have remained unfavourable for prospecting and very few properties have been submitted to the Company. Part of the area of the Creswick Creek, over which the Company held a lease application, has been drilled since the close of the financial year, but the results were disappointing and work was stopped and the lease application withdrawn. The lease application held in the Whipstick area, near Bendigo, has also been abandoned. Preliminary investigation of the Clunes field has continued throughout the year.

Examination of the drilling results previously obtained at Stawell has been continued and interpretation justifies further drilling, for which arrangements have been made.

Electricity Supply.

The Annual Report refers to the Upper Goulburn Transmission Line being built from Maindample, near Mansfield, to Woods Point, to connect the Morning Star (G.M.A.) Mines N.L. and A.1 Consolidated Gold N.L. companies to the State Electricity Commission power mains. Gold Mines of Australia Limited contracted to erect this line to the designs and specifications of the State Electricity Commission. This work includes the erection of 50.6 miles of high-tension line and four sub-stations and was finished in August, 1953, well ahead of schedule. The line is now energised and the two companies are drawing power from the State Electricity Commission supply.

Uranium.

As noted in the last Chairman's speech the Board intends to look for opportunities for development of metals other than gold. It is possible that the exploitation of uranium resources may provide an opportunity for engaging in the mining of this metal. If so, funds needed would be large and, in all probability, we would undertake any development in conjunction with others.

Conclusion.

In conclusion I desire to record the Directors' appreciation of the services rendered by the Technical and Administrative staffs of the Company.

The Balance Sheet as at March 31, 1953, the Statement of Accounts for the year ended on that date and the Report of the Directors were received and adopted.

The retiring Director, Mr. Frank F. Espie, was re-elected and Mr. Hugh Mirams, Chartered Accountant (Aust.), of the firm of Cook, Tomlins and Mirams, was re-appointed Auditor of the Company, until the next Annual Meeting at a remuneration to be fixed by the Directors.

The meeting then terminated.
